Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 April 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	02 August 2017
Global end of trial reached?	Yes
Global end of trial date	02 August 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objective of this study was to compare the efficacy of dosing and safety, 20% improvement according to American College of Rheumatology criteria (ACR20) at Week 24 of treatment with YLB113 50 mg or Enbrel 50 mg given once a week as a subcutaneous (SC) injection along with methotrexate (MTX) in patients with moderate to severe RA and to evaluate the long-term safety and immunogenicity, of YLB113 administration in comparison to Enbrel

Protection of trial subjects:

The study was conducted in accordance with the protocol, the ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines, applicable International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines, and applicable laws and regulations. The study was also conducted in accordance with the Japanese GCP in Japan and in accordance with ICH-GCP and/or local regulatory GCP in European Union (EU) and India. An ICF approved by each study center's IRB/IEC was signed by the subject or their legally authorized representative (according to the regulatory and legal requirements of the participating country). The ICF contained all relevant information to be conveyed to the prospective subject in order to assist him/her in making informed decision about participating in the study. Subjects were required to continue MTX, (Note: Reduction in the MTX dose was allowed for safety considerations only). Dosing with folic acid was allowed so as to prevent toxicity associated with MTX administration. For pain and rescue therapy, single-agent NSAIDs were allowed, (Note: Reduction in the dose of NSAIDs was allowed for safety considerations only). Oral corticosteroids (≤ 10 mg prednisone per day or equivalent corticosteroid) were allowed, (Note: Reduction in the dose of prednisolone was allowed for safety considerations only). Ongoing non-drug therapy started prior to obtaining informed consent (eg, physical therapy) for the purpose of treating the RA affected parts was allowed. A change to the type of such therapy or discontinuation based on an improvement in RA disease activity was allowed.

Background therapy:

Essential Medications (MTX)

Subjects were required to continue MTX (6 to 25 mg/week) provided that the dose of MTX was stable for at least 6 weeks prior to screening and remained stable for the duration of the study, except during the follow-up period (Note: Reduction in the MTX dose was allowed for safety considerations only).

Evidence for comparator:

YLB113 (developed by YL Biologics Co., Ltd. hereinafter referred to as YLB) is an investigational biosimilar of Enbrel® (manufactured and marketed by Pfizer, Inc. which has the active ingredient Etanercept. YLB113 is found to be biosimilar to Enbrel based on analytical similarity and preclinical studies conducted to compare with Enbrel. For the development of biosimilars it is necessary to establish the similarity in quality characteristics and to demonstrate equivalence in efficacy and safety with the innovator drug as the control group. YLB113 has demonstrated excellent similarity to Enbrel in terms of quality (CMC) parameters as well as comparability in non-clinical studies. Two comparative Phase I studies, conducted one each in Japan and India, has demonstrated bioequivalence between YLB113 and Enbrel at 25 mg and 50 mg doses, respectively. The current Phase III study was planned to further demonstrate therapeutic equivalence between YLB113 and Enbrel in terms of efficacy, long-term safety and immunogenicity in RA subjects.

Actual start date of recruitment	25 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Romania: 1
Country: Number of subjects enrolled	Spain: 25
Country: Number of subjects enrolled	Bulgaria: 48
Country: Number of subjects enrolled	Czech Republic: 45
Country: Number of subjects enrolled	Hungary: 70
Country: Number of subjects enrolled	Latvia: 16
Country: Number of subjects enrolled	Ukraine: 28
Country: Number of subjects enrolled	Japan: 262
Country: Number of subjects enrolled	India: 33
Worldwide total number of subjects	528
EEA total number of subjects	205

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	445
From 65 to 84 years	83
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 874 subjects were screened, and 528 subjects were randomized to YLB113 and Enbrel arms in a 1:1 ratio.

Pre-assignment

Screening details:

Screening period consisted of 28 days during which patients were to undergo an eligibility assessment. All Screening assessments were to be completed within 28 days prior to baseline.

Period 1

Period 1 title	Stage A double-blind phase (24 weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

All eligible subjects were randomly assigned the study medication, after all the required screening procedures were completed and all required data were submitted to the interactive web response system (IWRS) system. Subjects who qualified for study randomization received a unique randomization number by IWRS. The IWRS assigned subjects to a treatment group based on a predefined randomization list.

Arms

Are arms mutually exclusive?	Yes
Arm title	YLB113 (Lupin Etanercept) - stage A

Arm description:

Eligible subjects randomly assigned to receive YLB113 50 mg once a week as a SC injection for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	YLB113
Investigational medicinal product code	YLB113
Other name	INN ETANERCEPT, CAS 185243-69-0, EV substance code SUB01984MIG
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

YLB113 50 mg prefilled syringe 1.0 mL for SC injection

Arm title	Enbrel - stage A
------------------	------------------

Arm description:

Eligible subjects randomly assigned to receive Enbrel 50 mg once a week as a SC injection for 24 weeks.

Arm type	Active comparator
Investigational medicinal product name	Enbrel
Investigational medicinal product code	Enbrel
Other name	INN ETANERCEPT, CAS 185243-69-0, EV substance code SUB01984MIG
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Enbrel 50 mg prefilled syringe 1.0 mL for SC injection

Number of subjects in period 1	YLB113 (Lupin Etanercept) - stage A	Enbrel - stage A
Started	266	262
Completed	247	250
Not completed	19	12
Consent withdrawn by subject	8	2
Physician decision	1	1
Adverse event, non-fatal	2	5
Ineligible of patient	3	1
Other	1	-
Pregnancy	1	-
Not dosed	2	2
Protocol deviation	1	1

Period 2

Period 2 title	Stage B double-blind phase (28 weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	YLB113 (Lupin Etanercept) - stage B

Arm description:

Subjects administered with YLB113 50 mg who completed evaluations for Week 24 in Stage A and were willing to continue in Stage B, and tolerated the study medications administered in Stage A with no serious adverse events (SAEs), or unresolved Grade 3 or higher AEs related to study medication. The subjects were administered the same drug as Stage A once a week as a SC injection for 28 weeks in this multicenter, comparative study.

Arm type	Experimental
Investigational medicinal product name	YLB113
Investigational medicinal product code	YLB113
Other name	INN ETANERCEPT, CAS 185243-69-0, EV substance code SUB01984MIG
Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

YLB113 50 mg prefilled syringe 1.0 mL for SC injection

Arm title	Enbrel - stage B
------------------	------------------

Arm description:

Subjects administered with Enbrel 50 mg who completed evaluations for Week 24 in Stage A and were

willing to continue in Stage B, and tolerated the study medications administered in Stage A with no serious adverse events (SAEs), or unresolved Grade 3 or higher AEs related to study medication. The subjects were administered the same drug as Stage A once a week as a SC injection for 28 weeks in this multicenter, comparative study.

Arm type	Active comparator
Investigational medicinal product name	Enbrel
Investigational medicinal product code	Enbrel
Other name	INN ETANERCEPT, CAS 185243-69-0, EV substance code SUB01984MIG
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Enbrel 50 mg prefilled syringe 1.0 mL for SC injection

Number of subjects in period 2^[1]	YLB113 (Lupin Etanercept) - stage B	Enbrel - stage B
Started	236	235
Completed	227	227
Not completed	9	8
Physician decision	2	2
Consent withdrawn by subject	3	1
Adverse event, non-fatal	4	4
RA symptoms exacerbation	-	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: A total of 497 subjects completed Stage A (247 in YLB113 arm and 250 in Enbrel arm). Of these 497 subjects, 471 subjects entered in Stage B, 18 in Stage C while 8 subjects did not opt for either stage. Out of the 471 subjects that entered in Stage B, FAS population consisted of 464 subjects. All 18 subjects that entered in Stage C were part of FAS population.

Period 3

Period 3 title	Stage C double-blind phase (28 weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Enbrel - stage C

Arm description:

Subjects who received Enbrel 50 mg in Stage A, demonstrated reduction in their baseline DAS28 score by ≥ 0.6 at Week 12 and/or Week 24 and completed the 24-week period of Stage A, and tolerated the study medications administered in Stage A with no SAEs or unresolved Grade 3 or higher AEs related to study medication were eligible to enter Stage C were crossed over to receive YLB113 50 mg in Stage C

Arm type	Experimental

Adverse events

Adverse events information

Timeframe for reporting adverse events:

During Stage A (up to 24 weeks)

During Stage B and C (up to 28 weeks)

Adverse event reporting additional description:

AEs collected from date of informed consent until completion of the final visit (28 days follow up visit) and SAEs occurring after the time of informed consent until the final visit (28 days follow up visit) have been reported. SAEs occurring after end of study should be reported if PI considers that there is a casual relationship with study drug.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 June 2015	Protocol Version 1.0 was submitted to the PMDA. Protocol Version 1.0 was the first protocol approved by the IRB. It was implemented only in Japan.
16 July 2015	Protocol Amendment Version 1.1 was an amendment of Protocol Version 1.0, which was modified as per the PMDA advice. It was implemented only in Japan.
29 July 2015	<p>Protocol Amendment Version 1.1.1 was an amendment of Protocol Version 1.1, and was implemented in Europe and India, but not in Japan.</p> <p>This amendment concerned the changes of washout period of auranofin and hydroxychloroquine (annexure 15 of the protocol), from 5 months and 8 months, respectively, to 4 weeks for both, based on reconsideration of their maximum half-lives.</p>
10 February 2016	<p>In addition to the changes made in the Protocol Amendment Version 1.1, the following changes were made in the Protocol Amendment Version 1.1.2. This protocol amendment was implemented only in Japan.</p> <ul style="list-style-type: none">• The exclusion criterion No. 7 (Section 4.3) was revised as follows (underlined below) according to the Investigators' opinions that remission is indicated for a patient with a history of cancer who remained cancer-free for 5 years. <p>Patients with active or prior history of malignancies within 5 years prior to Screening (except for successfully treated non-metastatic basal or squamous cell carcinoma of the skin and carcinoma in situ of the cervix).</p> <ul style="list-style-type: none">• The following phrase (underlined) was deleted from the description of the pregnancy test in Section 9.6 to be consistent with the actual logistic arrangement. <p>Pregnancy test for females of childbearing potential will be performed at Screening, 24 weeks (or ED) and 52 weeks (or ED) at each clinical site and analyzed in central laboratory.</p> <ul style="list-style-type: none">• The following change ("approximately") was made to the target number of patients enrolled in Stage A (Section 10.1.1) because the competitive patient recruitment across 14 countries made it difficult to end recruitment precisely at the target. <p>Approximately 500 patients will be randomized for this study in consideration of the dropouts and deviations.</p> <ul style="list-style-type: none">• This amendment concerned the changes of washout period of auranofin and hydroxychloroquine (annexure 15 of the protocol), from 5 months and 8 months, respectively, to 4 weeks for both, based on reconsideration of their maximum half-lives.

26 May 2016	<p>Protocol Amendment Version 2.0 was implemented only in Japan.</p> <p>In this amendment, the study objective was changed to include an additional objective for assessing the sustainability of efficacy of Enbrel and YLB113 after crossing over the treatments. For this purpose, Stage C was added, which, however, was not to be conducted in Japan.</p> <p>Sections across the protocol were amended in line with this change in the objective. Please refers to underlined sentences reported in the Protocol Amendment and full CSR in the following sections:</p> <ul style="list-style-type: none"> • Study objectives in synopsis and in Section 2.1 • Study population in synopsis • Number of patients in synopsis • Study duration and treatment period in synopsis • Inclusion criteria in synopsis and in Section 4.2. • Exclusion criteria in synopsis and in Section 4.3. • Re-consenting procedure was newly added to the synopsis • Footnote of Table 2 for Stage B or Stage C • Section 3.2.1. • Section 3.2.3. Stage C • Section 6.1.2. • Section 6.3.3. Stage C • Section 7.2.2. • Section 7.2.3. • Refer Section 7.2.5: 'Continuation of Stage B or Stage C treatment' for visits beyond Week 36 for the description of the assessments. • Section 10.1.3. <p>The following changes were also made to the protocol:</p> <ul style="list-style-type: none"> • The target number of participating sites (Synopsis, Section 4.4.2) was changed to 140 based on the forecasted accruals at the time. • A sentence was deleted in Section 6.4.1 to be consistent with the inclusion criteria. • A phrase was added to Section 4.5.1 to further define study-completed patients, and the phrase in italic was deleted • A phrase was added to Section 6.4.2 to allow study drug continuation beyond 52 weeks up to the follow-up visit for patients participating in an extension study, if conducted.
01 July 2016	<p>Protocol Amendment Version 2.1 was implemented in all regions, except that Stage C was not to be conducted in Japan.</p> <p>In this amendment, the following changes were made to the Protocol Amendment Version 2.0.</p> <ul style="list-style-type: none"> • The target enrolled patient number in Sections 4.4.1 and in 10.1.1 were changed as follows (underlined) since the competitive recruitment made it unlikely that the target number in each region would be as planned. Planned number of enrolled patients: 500 (250 in each arm) Randomization, YLB113:Enbrel = 1:1. The number of enrolled patients in Japan, EU and India is expected to be 500 with a competitive recruitment aiming to recruit approximately half the patients in Japan and half in Europe and India. • The following underlined sentence was added to Section 6.1.1, since the drastically different screening failure rates between the regions prevented stopping screening in order to ensure enrollment of 500 patients, forcing the Sponsor to deny randomization for some screened and eligible patients to ensure that the total numbers specified in the protocol (500 randomized) was not exceeded by 10%. • The treatment assignment will occur at the time of randomization, after all the required screening procedures have been completed and all required data have been submitted to the IWRS system. Patients who qualify for study randomization will receive a unique randomization number by IWRS (see IWRS manual). After completion of required numbers (500 randomized), some patients who qualify in screening may not be randomized.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
