### General information about the trial

Main objective of the trial:

The main objective of this study was to determine if the compounded suspension formulation of olmesartan medoxomil (4 milligrams per milliliter [mg/mL] × 10 mL, for a total dose of 40 mg) is bioequivalent to the marketed tablet formulation of Benicar (1 × 40 mg tablet).

Protection of trial subjects:

Safety variables included clinical and laboratory adverse events, concomitant medications, physical examination findings, vital signs, electrocardiogram (ECG) results, and hematology, serum chemistry, and urinalysis laboratory results.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 October 2004
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

## Subject disposition

### Recruitment

Recruitment details:

Participants were screened from 24 October 2004 to 14 November 2004.

### Pre-assignment

Screening details:

A total of 26 subjects were enrolled and randomized into the study. Of these 24 subjects completed the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	Sequence AB

Arm description:

Subjects were administered with 10 milliliter (ml) (4 milligram per milliliter [mg/ml]) olmesartan medoxomil oral suspension (Treatment A) on Day 1 of Period 1 and 40 mg of olmesartan medoxomil tablet (Benicar) (Treatment B) on Day 1 of Period 2. Both the periods were separated by a washout period of 7 days.

Arm type	Experimental
Investigational medicinal product name	Olmesartan Medoxomil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Subjects were administered with olmesartan medoxomil oral suspension (Benicar 20 mg tablets dispersed in a vehicle containing water, Ora-Plus, and Ora-Sweet) on Day 1 of either Period 1 or Period 2 with 240 ml of water.

Investigational medicinal product name	Olmesartan Medoxomil

#### End point description:

The AUC (0-infinity) is the area under the plasma concentration-time curve from time zero to infinite time, calculated as the sum of AUC(last) and C(last)/lambda(z); wherein AUC(last) is area under the plasma concentration-time curve from time zero to last quantifiable time, C(last) is the last observed quantifiable concentration, and lambda(z) is elimination rate constant. Pharmacokinetic population included all subjects who received at least one dose of study drug and had a valid Pharmacokinetic profile.
