

Clinical trial results:

An open label trial evaluating the pharmacokinetics and safety of an intravenously administered single dose of Feramyl® 200 mg, 500 mg or 1500 mg vs. Ferinject® 500 mg in patients suffering from anaemia following cardiac surgery.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 April 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 October 2016
Global end of trial reached?	Yes
Global end of trial date	14 October 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Primary objective is to evaluate dose proportionality of single dose Feramyl® given as 200 mg, 500 mg and 1500 mg i.v. infusion in terms of total iron in plasma.

Secondary objectives are:

- To evaluate general safety and tolerability of Feramyl® given as 200 mg, 500 mg and 1500 mg i.v. infusion to that of 500 mg Ferinject® i.v. infusion.
- To evaluate the early phase iron parameters of Feramyl® given as 200 mg, 500 mg and 1500 mg i.v. infusion and compare Feramyl® 500 mg i.v. infusion to that of 500 mg Ferinject® i.v. infusion.
- To evaluate urine iron parameters of Feramyl® given as 200 mg, 500 mg and 1500 mg i.v. infusion and compare Feramyl® 500 mg i.v. infusion to that of 500 mg Ferinject® i.v. infusion.
- To characterize the pharmacokinetic parameters of Feramyl® given as 200 mg, 500 mg and 1500 mg i.v. infusion and compare Feramyl® 500 mg i.v. infusion to that of 500 mg Ferinject® i.v. infusion in terms of total iron in plasma.

Protection of trial subjects:

The DSMB had their first meeting before trial start to decide on meeting frequency and format, the degree, form and frequency of the information needed to monitor trial safety. In addition, the DSMB met prior to start of the 500 mg and 1500 mg dosing groups to evaluate whether or not it was safe to proceed to the next dose level.

The DSMB's tasks were to:

- Monitor safety data
- Assess any critical adverse event (CAE) occurring during the trial
- Assess safety profile after each dose level
- Evaluate PK and urine data
- Evaluate specific rat study before start of the 1500 mg feramyl(R) treatment group

Background therapy: -

Evidence for comparator:

Ferinject (comparator) is an iron-containing nanoparticle, where the shielding sugar is carboxymaltose, which is less antigenic than the sugars in other iron containing drugs based on dextran as the sugar moiety.

Actual start date of recruitment	06 November 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 33
Worldwide total number of subjects	33
EEA total number of subjects	33

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	22
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

8 subjects were enrolled in cohort 1 from 06-Nov-2015 to 11-Dec-2015, 18 were enrolled in cohort 2 from 23-Feb-2016 to 04-Jun-2016 (one was not treated due to withdrawal of consent) and 8 subjects were enrolled into cohort 3 from 21-Jun-2016 to 14-Oct-2016.

Pre-assignment

Screening details:

79 subjects were screened before cardiac surgery and reevaluated for participation after surgery depending on 1) low mortality risk, 2) severity of anaemia and 3) blood pressure.

Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

No blinding was used as endpoints are based on lab values.

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1

Arm description:

Subjects in cohort 1 received 200 mg Feramyl.

Arm type	Experimental
Investigational medicinal product name	Feramyl
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg Feramyl was administered as single i.v. infusion over a period of 15 minutes by use of an infusion pump.

Arm title	Cohort 2 - experimental
------------------	-------------------------

Arm description:

Subjects in cohort 2 were randomized to either receive 500 mg Feramyl or 500 mg Ferinject.

Arm type	Experimental
Investigational medicinal product name	Feramyl
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

500 mg Feramyl was administered as single i.v. infusion over a period of 15 minutes by use of an infusion pump.

Arm title	Cohort 2 - comparator
------------------	-----------------------

Arm description:

Subjects in cohort 2 were randomized to either receive 500 mg Feramyl or 500 mg Ferinject.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Ferinject
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

500 mg Ferinject was administered as single i.v. infusion over a period of 15 minutes by use of an infusion pump.

Arm title	Cohort 3
------------------	----------

Arm description:

Subjects in cohort 3 received 1500 mg Feramyl.

Arm type	Experimental
Investigational medicinal product name	Feramyl
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1500 mg Feramyl was administered as single i.v. infusion over a period of 15 minutes by use of an infusion pump.

Number of subjects in period 1	Cohort 1	Cohort 2 - experimental	Cohort 2 - comparator

Primary: Total Iron in Plasma AUC(0-infinity)

End point title	Total Iron in Plasma AUC(0-infinity) ^[1]
End point description: The primary objective of the trial was examined by the co-primary endpoints: AUC(0-infinity) and Cmax of total iron in plasma following infusion calculated for subjects exposed to Feramyl® treatment. AUC(0-infinity) is the area under the concentration time curve for plasma total iron from time 0 (start of infusion) to infinity and Cmax the maximum concentration of the same profile. Dose proportionality could not be claimed for Feramyl, as the 90% CI for both co-primary endpoints was not entirely contained within the limits 0.80 – 1.25. The 90% CI for AUC(0-infinity) ranged between 1.05 – 1.39. Scatterplot of AUC(0-infinity) did however show dose dependency.	
End point type	Primary
End point timeframe: 72 hours	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary objective of the trial is examined by the co-primary endpoints: AUC(0-infinity) and Cmax of total iron in plasma following infusion calculated for subjects exposed to treatment with Feramyl. AUC(0-infinity) is the area under the concentration time curve for plasma total iron from time 0 (start of infusion) to infinity and Cmax the maximum concentration of the same profile.

The results will be used for comparison between the 4 groups. No statistical analysis is performed.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 March 2016	Substantial amendment specifying that anesthesia was not required to be transcribed from source data to the eCRF, as the operation was not considered trial related. In addition, the amendment covered a specification of inclusion criteria no 4 (level of anaemia) for the 1500 mg treatment group.
28 June 2016	Opening of an extra site in Århus as recruitment for the 1500 mg treatment group was significantly delayed at Rigshospitalet. The delay was due to the severe anaemia required for subjects to qualify for the 1500 mg treatment group. This amendment never came into force as the subjects became available at Rigshospitalet.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
