

## Clinical trial results:

**A multi-centre Phase IIa double-blind, placebo-controlled study to investigate the efficacy and safety of GSK3196165 in subjects with inflammatory hand osteoarthritis.**

### Summary

EudraCT number	2015-003089-96
Trial protocol	GB DE NL PL
Global end of trial date	29 November 2017

### Results information

Result version number	v2 (current)
This version publication date	12 April 2019
First version publication date	12 December 2018
Version creation reason	

### Trial information

#### Trial identification

Sponsor protocol code	204851
-----------------------	--------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom,
Public contact	GSK Response Center, GlaxoSmithKline, 1 866-435-7343,
Scientific contact	GSK Response Center, GlaxoSmithKline, 1 866-435-7343,

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	13 April 2018
Is this the analysis of the primary completion data?	No

---

Global end of trial reached?	Yes
Global end of trial date	29 November 2017
Was the trial ended prematurely?	No

---

Notes:

---

**General information about the trial**

---

Main objective of the trial:

To assess the efficacy potential of GSK3196165 on pain in inflammatory hand osteoarthritis.

---

Protection of trial subjects:

Paracetamol (acetaminophen) was a permitted concomitant medication for hand pain, for the duration of this study and could be taken on an as needed basis up to 4gram per day or to the maximum permitted under local label.

---

Background therapy: -

---

Evidence for comparator: -

---

Actual start date of recruitment	17 March 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

---

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	Germany: 11
Country: Number of subjects enrolled	Netherlands: 8
Country: Number of subjects enrolled	Poland: 8
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	United States: 7
Worldwide total number of subjects	44
EEA total number of subjects	37

---

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	36

---

From 65 to 84 years	8
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This was a multi-center, double-blind, placebo-controlled study to investigate the efficacy and safety of GSK3196165 in participants with inflammatory hand osteoarthritis. The study was conducted in five countries in Poland, United Kingdom, Netherlands, Germany and United States.

### Pre-assignment

Screening details:

A total 121 participants were screened of which 77 were screen failures and 44 participants were enrolled in the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants randomized to Placebo group received total of 8 subcutaneous injections of placebo over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants were administered sterile 0.9 percentage (w/v) sodium chloride solution.

<b>Arm title</b>	GSK3196165 180mg
------------------	------------------

Arm description:

Participants randomized to GSK3196165 group received total of 8 doses of GSK3196165 over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).

Arm type	Experimental
Investigational medicinal product name	GSK3196165
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants were administered 180 milligram (1.2 milliliter) of GSK3196165 aqueous solution of purified monoclonal antibody.

<b>Number of subjects in period 1</b>	Placebo	GSK3196165 180mg
Started	22	22
Completed	21	18
Not completed	1	4
Consent withdrawn by subject	1	1
Adverse event, non-fatal	-	2
Lost to follow-up	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants randomized to Placebo group received total of 8 subcutaneous injections of placebo over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).

Reporting group title	GSK3196165 180mg
-----------------------	------------------

Reporting group description:

Participants randomized to GSK3196165 group received total of 8 doses of GSK3196165 over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).

Reporting group values	Placebo	GSK3196165 180mg	Total
Number of subjects	22	22	44
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	19	17	36
From 65-84 years	3	5	8
85 years and over	0	0	0
Age Continuous Units: Years			
arithmetic mean	56.7	60.9	
standard deviation	± 6.80	± 6.25	-
Sex: Female, Male Units: Subjects			
Female	20	20	40
Male	2	2	4
Race/Ethnicity, Customized Units: Subjects			

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Participants randomized to Placebo group received total of 8 subcutaneous injections of placebo over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).	
Reporting group title	GSK3196165 180mg
Reporting group description: Participants randomized to GSK3196165 group received total of 8 doses of GSK3196165 over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).	

### Primary: Change from Baseline in 24-hour average hand pain intensity, averaged over the 7 days prior to Week 6

End point title	Change from Baseline in 24-hour average hand pain intensity, averaged over the 7 days prior to Week 6
End point description: Participants were required to complete a daily pain NRS based on their 24-hour average hand pain intensity with the anchors "0" (no pain) and "10" (worst imaginable pain), which was averaged over the 7 days prior to assessment visit. The 7 day average score was calculated as sum of daily 24 hours average hand pain NRS scores in the 7 days prior to assessment visit, divided by number of entries recorded in those 7 days. Baseline visit was at Day 1 and Baseline value was defined as the average of the 7 days prior to baseline visit (Day 1 pre-dose). Change from Baseline is equal to post-dose visit value minus Baseline value. Intent-To-Treat Population comprised of all randomized participants who received at least one dose of study treatment (GSK3196165 or placebo). n=X in category titles represents the number of participants with non-missing data at the specified time-point. Only non-missing data is included in the MMRM model.	
End point type	Primary
End point timeframe: Baseline (Day 1 Pre-dose) and Week 6	

End point values	Placebo	GSK3196165 180mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	21 <sup>[1]</sup>	20 <sup>[2]</sup>		
Units: Scores on scale				
least squares mean (standard error)	-1.34 (± 0.325)	-1.70 (± 0.334)		

Notes:

[1] - Intent To Treat Population.

[2] - Intent To Treat Population.

### Statistical analyses

Statistical analysis title	Difference from placebo for Week 6 is presented
Comparison groups	Placebo v GSK3196165 180mg

Number of subjects included in analysis	41
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.442 <sup>[3]</sup>
Method	Mixed Model Repeated Measures Analysis
Parameter estimate	Mean difference (net)
Point estimate	-0.36
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.31
upper limit	0.58

Notes:

[3] - MMRM model with fixed effects of Baseline Value, Treatment Group, Visit and Treatment Group by Visit Interaction was used. Unstructured covariance structure was used. p-value corresponds to the difference over placebo measure and confidence interval

### Secondary: Change from Baseline in 24 hours average hand pain intensity averaged over the 7 days prior to each visit

End point title	Change from Baseline in 24 hours average hand pain intensity averaged over the 7 days prior to each visit
-----------------	---

End point description:

Participants were required to complete a daily pain NRS based on their 24-hour average hand pain intensity with the anchors "0" (no pain) and "10" (worst imaginable pain), which was averaged over the 7 days prior to assessment visit. The 7 day average score is calculated by sum of daily 24 hours average hand pain NRS scores in the 7 days prior to assessment visit, divided by number of entries recorded in those 7 days. Baseline visit was at Day 1 and Baseline value was defined as the average of the 7 days prior to baseline visit (Day 1 pre-dose). Change from Baseline is equal to post-dose visit value minus Baseline value. n=X in category titles represents the number of participants with non-missing data at the specified time-point. Only non-missing data is included in the MMRM model.

### **Secondary: Percentage of participants achieving a 30 percentage reduction from Baseline in 24 hours average hand pain intensity at each visit**

End point title	Percentage of participants achieving a 30 percentage reduction from Baseline in 24 hours average hand pain intensity at each visit
-----------------	--

End point description:

Participants were required to complete average pain NRS daily and rate the average hand pain over last

24 hours on a scale of 0 (no pain) to 10 (worst imaginable pain). The percentage of participants who achieved at least 30 percentage reduction from Baseline in the 24-hours average hand pain intensity as measured by daily NRS and averaged over 7 days prior to each visit is reported. Participants with missing data at a particular visit had been assumed to be non-responders.

End point type	Secondary
End point timeframe:	
Baseline (Pre-dose, Day 1), Weeks 1, 2, 3, 4, 6, 8, 10, 12 and follow up (Week 22)

## Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of participants achieving a 50 percentage reduction from Baseline in 24 hours average hand pain intensity at each visit

End point title	Percentage of participants achieving a 50 percentage reduction from Baseline in 24 hours average hand pain intensity at each visit
-----------------	--

End point description:

Participants were required to complete average pain NRS daily and rate the average hand pain over last 24 hours on a scale of 0 (no pain) to 10 (worst imaginable pain). The percentage of participants who achieved at least 50 percentage reduction from Baseline in the 24-hours average hand pain intensity as measured by daily NRS and averaged over 7 days prior to each visit is presented. Participants with missing data at a particular visit had been assumed to be non-responders.

End point type	Secondary
End point timeframe:	
Baseline (Pre-dose, Day 1), Weeks 1, 2, 3, 4, 6, 8, 10, 12 and follow up (Week 22)

## Statistical analyses

No statistical analyses for this end point

### Secondary: Change from Baseline in Australian Canadian Hand Osteoarthritis Index (AUSCAN) 3.1 NRS scores at each visit.

End point title	Change from Baseline in Australian Canadian Hand Osteoarthritis Index (AUSCAN) 3.1 NRS scores at each visit.
-----------------	--

# End point description:

The AUSCAN Index is a self-administered questionnaire consisting of a 15-item scale which measures pain (5 items), stiffness (1 item) and degree of disability/physical function (9 items) during the preceding 48 hours. All items are rated on NRS scale with anchors "0" (none) to "10" (extreme). The scores for the pain and physical function components were calculated as simple summation of the item scores relating to that domain, so the Pain component ranges from 0 (i.e. all pain item scores are scored 0 [none]) to 50 (i.e. all pain item scores are scored 10 [extreme]), and the Physical Function component ranges from 0 (i.e. all physical function item scores are scored 0 [none]) to 90 (i.e. all physical function item scores are scored 10 [extreme]). The total AUSCAN score was calculated as simple summation of the 15 item scores and therefore ranges from 0 to 150. Baseline is defined as Day 1 pre-dose value. Change from Baseline is equal to post-dose visit value minus Baseline value.

End point type	Secondary

### **Secondary: Change from Baseline in number of soft tissue swollen hand joints at each visit**

End point title	Change from Baseline in number of soft tissue swollen hand joints at each visit
-----------------	---

End point description:

Swollen Hand Joint Count was measured by the total number of soft tissue swollen hand joints out of a possible 30 joints: 8 distal interphalangeal, 8 proximal interphalangeal, 2 interphalangeal joints, 10 metacarpophalangeal joints, 2 carpometacarpal joint across both hands. In case of missing observations for soft tissue swollen hand joints then the remaining observations were assessed and weighted by dividing the number presented by the number of non-missing, and by multiplying by 30 for the joint count. Baseline is defined as Day 1 pre-dose value. Change from Baseline is equal to post-dose visit value minus Baseline value. n=X in category titles represents the number of participants with non-missing data at the specified time-point. Only non-missing data is included in the MMRM model.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (Day 1 Pre-dose), Weeks 1, 2, 4, 6, 8, 10, and 12

### Secondary: Number of participants with pulmonary events

End point title	Number of participants with pulmonary events
End point description: Pulmonary events like pulmonary alveolar proteinosis (PAP), persistent (for 3 consecutive weeks) reduction in diffusing capacity of the lungs for carbon monoxide (DLCO) > 15 percentage, persistent (for 3 consecutive weeks) cough and/or dyspnea and non- life threatening pulmonary changes related to surfactant accumulation is presented.	
End point type	Secondary
End point timeframe: Up to Week 22	

End point values	Placebo	GSK3196165 180mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	22	22		
Units: Participants				
Persistent dyspnea	0	0		
Persistent decrease in DLCO	0	0		
Persistent Cough	0	0		
Abnormal Lung Auscultation	0	0		
PAP	0	0		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of participants with anti-GSK3196165 binding antibodies

End point title	Number of participants with anti-GSK3196165 binding antibodies
-----------------	--

End point description:

Serum samples were collected at indicated time points for anti-drug antibody (ADA) measurements. Anti-GSK3196165 binding antibody detection assay using tiered testing schema: screening, confirmation and titration steps was used for immunogenicity analysis. Samples taken after dosing with GSK3196165 that have a value at or above the cut-point were considered treatment-emergent ADA-positive. The number of participants with change from Baseline to any time post Baseline in the results of immunogenicity assessment as indicated by: negative to positive, positive to positive, positive to negative and negative to negative are presented.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Week 22

End point values	Placebo	GSK3196165 180mg

Units: Participants				
Negative to positive	0	1		
Positive to positive	0	0		
Positive to negative	0	0		
Negative to negative	22	20		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Apparent clearance after subcutaneous administration (CL/F) of GSK3196165

End point title	Apparent clearance after subcutaneous administration (CL/F) of GSK3196165 <sup>[92]</sup>
-----------------	---

End point description:

Blood samples were collected at indicated time points and CL/F was estimated using population PK analysis. Participants in the 'Safety' population who have at least one valid PK assessment were included Pharmacokinetic (PK) Population.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 3 and Pre-dose on Week 1, Week 4, Week 6, Week 12 and Week 22

Notes:

[92] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis for this endpoint.

<b>End point values</b>	GSK3196165 180mg			
Subject group type	Reporting group			
Number of subjects analysed	21 <sup>[93]</sup>			
Units: Liters per day				
geometric mean (geometric coefficient of variation)	4.94 (± 68.8)

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Non-serious adverse events (AEs) and serious AEs were collected up to Week 22.

Adverse event reporting additional description:

Non-serious AEs and SAE for Safety Population was reported.

Assessment type	Systematic

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants randomized to Placebo group received total of 8 subcutaneous injections of placebo over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).

Reporting group title	GSK3196165 180mg
-----------------------	------------------

Reporting group description:

Participants randomized to GSK3196165 group received total of 8 doses of GSK3196165 over a 12-week treatment period. Participants were administered loading doses on Days 1, 8, 15, 22 and 29 which was followed by 3 doses every other week (Days 43, 57, 71).

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 November 2015	Amendment No. 1: Correction of contraceptive requirements in Appendix 5, in response to regulatory review comments. Minor correction of question number in post-treatment interview guidance.
03 January 2017	Amendment No. 2: Amendment of inclusion criteria, #2, #3 and #5, clarification of exclusion criteria #9 and amendment of exclusion criteria #19(d). Addition of two planned interim analyses to Section Data Analysis Considerations and associated update to study blinding details. Addition of two PK sample time points (one on Day 85 and one on Day 155). Further minor corrections and clarifications to wording throughout the protocol.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
