Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 December 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 July 2018
Global end of trial reached?	Yes
Global end of trial date	05 July 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of dupilumab 300 mg every 2 weeks (q2w) compared to placebo on a background of mometasone furoate nasal spray (MFNS) in reducing nasal congestion (NC)/obstruction severity and endoscopic nasal polyp score (NPS) in subjects with bilateral nasal polyposis (NP).

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject was participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 December 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	Poland: 16
Country: Number of subjects enrolled	United Kingdom: 19
Country: Number of subjects enrolled	Bulgaria: 11
Country: Number of subjects enrolled	Czech Republic: 8
Country: Number of subjects enrolled	France: 8
Country: Number of subjects enrolled	Germany: 16
Country: Number of subjects enrolled	Hungary: 34
Country: Number of subjects enrolled	Italy: 23
Country: Number of subjects enrolled	Romania: 39
Country: Number of subjects enrolled	Russian Federation: 20
Country: Number of subjects enrolled	Ukraine: 45
Country: Number of subjects enrolled	United States: 34
Worldwide total number of subjects	276
EEA total number of subjects	177

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	233
From 65 to 84 years	42
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Study subjects were involved in the study from 05 December 2016 to 05 July 2018 at 67 active centres in 13 countries. A total of 506 subjects were screened, of which 276 subjects were enrolled and randomised to receive dupilumab 300 mg or placebo. A total of 230 subjects failed screening mainly due to failure to meet inclusion criteria.

Pre-assignment

Screening details:

Randomisation was stratified by the presence of comorbid asthma and/or non-steroidal anti-inflammatory drug exacerbated respiratory disease (NSAID-ERD), prior NP surgery (yes or no), and country.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo (for dupilumab), 1 subcutaneous (SC) injection every 2 weeks (q2w) from Day 1 of Week 0 up to Week 24 added to background therapy of intranasal MFNS at stable dose.

Arm type	Placebo
Investigational medicinal product name	Placebo (matched to dupilumab 300 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

2 millilitre (mL), SC injection once q2w using a prefilled syringe for 24 weeks.

Arm title	Dupilumab 300 mg
------------------	------------------

Arm description:

Dupilumab 300 mg SC injection q2w from Day 1 of Week 0 up to Week 24 added to background therapy of intranasal MFNS at stable dose.

Arm type	Experimental
Investigational medicinal product name	Dupilumab 300 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

2 mL, SC injection once q2w using a prefilled syringe for 24 weeks.

Number of subjects in period 1	Placebo	Dupilumab 300 mg
Started	133	143
Treated	133	142
Safety Population	132	143
Completed	124	138
Not completed	9	5
Randomised and not treated	-	1
Consent withdrawn by subject	6	2
Adverse Event	3	2

Baseline characteristics

Reporting groups

Reporting group title	Placebo
Reporting group description:	
Placebo (for dupilumab), 1 subcutaneous (SC) injection every 2 weeks (q2w) from Day 1 of Week 0 up to Week 24 added to background therapy of intranasal MFNS at stable dose.	
Reporting group title	Dupilumab 300 mg
Reporting group description:	
Dupilumab 300 mg SC injection q2w from Day 1 of Week 0 up to Week 24 added to background therapy of intranasal MFNS at stable dose.	

Reporting group values	Placebo	Dupilumab 300 mg	Total
Number of subjects	133	143	276
Age categorical			
Units: Subjects			

Age continuous			
Units: years			
arithmetic mean	50.83	50.17	
standard deviation	± 13.21	± 13.59	-

Gender categorical			
Units: Subjects			
Female	63	55	118
Male	70	88	158

Ethnicity			
-----------	--	--	--

In the placebo arm, 131 subjects were only involved in the evaluation of the specified baseline measure.

Units: Subjects			
Hispanic or Latino	1	5	6
Not Hispanic or Latino	130	138	268
Unknown	2	0	2

Race			
Units: Subjects			
American Indian or Alaska Native	0	1	1
Asian	0	1	1
Black or African American	7	2	9
White	126	138	264
Unknown or Not Reported	0	1	1

Nasal Congestion/Obstruction Symptom Severity Score			
---	--	--	--

NC symptom severity was assessed by the subjects on a scale of 0 to 3, where 0 = no symptoms, 1 = mild symptoms, 2 = moderate symptoms and 3 = severe symptoms, with higher scores indicated more severity.

Units: score on a scale			
arithmetic mean	2.45	2.26	
standard deviation	± 0.55	± 0.57	-

Nasal Polyp Score			
-------------------	--	--	--

NPS was the sum of right and left nostril scores, as evaluated by means of nasal endoscopy. For each nostril, NPS was graded based on polyp size from 0 to 4 (0 = no polyps to 4 = large polyps causing complete obstruction of the inferior nasal cavity), with a lower score indicating smaller-sized polyps. Total NPS was the sum of right and left nostril scores and ranges from 0 (no polyps) to 8 (large polyps),

with higher score representing more severe disease. In the placebo arm, 132 subjects were only involved in the evaluation of the specified baseline measure.			
Units: score on a scale			
arithmetic mean	5.86	5.64	
standard deviation	± 1.31	± 1.23	-

End points

End points reporting groups

Reporting group title	Dupilumab 300 mg
Reporting group description: Dupilumab 300 mg SC injection q2w from Day 1 of Week 0 up to Week 24 added to background therapy of intranasal MFNS at stable dose.	

Primary: Change From Baseline at Week 24 in Nasal Congestion/Obstruction Symptom Severity Score

End point title	Change From Baseline at Week 24 in Nasal Congestion/Obstruction Symptom Severity Score
End point description: NC symptom severity was assessed by the subjects on a daily basis from Visit 1 and throughout the study using an e-diary on a scale of 0 to 3, where 0 = no symptoms, 1 = mild symptoms, 2 = moderate symptoms and 3 = severe symptoms, with higher scores indicated more severity. Least squares (LS) means and standard error (SE) were obtained from Analysis of covariance (ANCOVA) model described in Statistical Analysis Overview. The analysis was performed on intent-to-treat (ITT) population which included all randomised subjects who were analysed according to the treatment group allocated by randomisation.	
End point type	Primary
End point timeframe: Baseline, Week 24	

End point values	Placebo	Dupilumab 300 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	133	143

least squares mean (standard error)	-0.45 (± 0.07)	-1.34 (± 0.07)		

Statistical analyses

Statistical analysis title	Dupilumab 300 mg versus Placebo
Statistical analysis description: Data were analysed using a hybrid method of the worst-observation carried forward (WOCF) and multiple imputation (MI). The imputed completed data were analysed by fitting ANCOVA model with corresponding baseline, treatment group, asthma/NSAID-ERD status, prior surgery history, and regions as covariates. Statistical inference obtained from all imputed data was combined using Rubin's rule.	
Comparison groups	Dupilumab 300 mg v Placebo

Number of subjects included in analysis	276
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001
Method	ANCOVA
Parameter estimate	LS mean difference
Point estimate	-0.89
Confidence interval

Secondary: Change From Baseline at Week 24 in Opacification of Sinuses Measured by Lund-Mackay Score

End point title	Change From Baseline at Week 24 in Opacification of Sinuses Measured by Lund-Mackay Score
-----------------	---

End point description:

The LMK scoring system rated each of both the left and right frontal, maxillary, sphenoid, ostiomeatal complex, anterior ethmoid and posterior ethmoid sinuses using following grading: 0 = normal, 1 = partial opacification, 2 = total opacification. The total score was the sum of scores from each side and ranges from 0 (normal) to 24 (more opacified); higher score indicated more severe disease. LS means and SE were obtained from ANCOVA model described in Statistical Analysis Overview. NOTE: For Japan regulatory submission only, this end point is not included as a secondary outcome measure and is instead one of the co-primary outcome measures. The analysis was performed on ITT population. Here, 'number of subjects analysed' = subjects evaluable for this end point.

lower limit	-8.35
upper limit	-6.53

Notes:

[1] - Hierarchical testing procedure was used to control type I error. For regions outside of Japan, this first secondary endpoint was not tested unless both co-primary endpoints were significant at the 0.05 level. Hierarchical testing continued only when previous endpoint was statistically significant. For Japan submission, LMK was instead a co-primary endpoint which also had to be met before secondary endpoints were tested in the hierarchy. Last endpoint in hierarchy is Week 24 SNOT-22.

[2] - Threshold for significance at 0.05 level.

Secondary: Change From Baseline at Week 24 in Total Symptom Score (TSS)

End point title	Change From Baseline at Week 24 in Total Symptom Score (TSS)
End point description:	
<p>The TSS was the sum of subject-assessed nasal symptom scores for NC/obstruction, decreased/loss of sense of smell, and rhinorrhea (anterior/posterior nasal discharge), each accessed on 0 to 3 categorical scale (where 0 = no symptoms, 1 = mild symptoms, 2 = moderate symptoms and 3 = severe symptoms). Total score ranged from 0 (no symptoms) to 9 (severe symptoms). Higher score indicated more severe symptoms. LS means and SE were obtained from ANCOVA model described in Statistical Analysis Overview. The analysis was performed on ITT population.</p>

End point description:

The EQ-5D was a standardized HRQoL questionnaire consisting of EQ-5D descriptive system and EQ VAS. EQ-5D descriptive system comprised of 5 dimensions: mobility, selfcare, usual activities, pain/discomfort and anxiety/depression. Each dimension has 5 levels: no problems, slight problems, moderate problems, severe problems, and extreme problems. EQ-VAS recorded the subject's self-rated health on a vertical VAS that allowed them to indicate their health state that can range from 0 (worst imaginable) to 100 (best imaginable). The analysis was performed on ITT population. Here, 'number of subjects analyzed' = subjects evaluable for this end point.

Secondary: Change From Baseline at Week 24 in Nasal Congestion Symptom Severity Score: Subgroup of Subjects With Asthma

End point title	Change From Baseline at Week 24 in Nasal Congestion Symptom Severity Score: Subgroup of Subjects With Asthma
-----------------	--

End point description:

NC symptom severity was assessed by the subjects on a daily basis from Visit 1 and throughout the study using an e-diary on a scale of 0 to 3, where 0 = no symptoms, 1 = mild symptoms, 2 = moderate symptoms and 3 = severe symptoms, with higher scores indicated more severity. Data were analysed using a hybrid method of the WOCF and MI. The imputed completed data were analysed by fitting ANCOVA model with corresponding baseline, treatment group, prior surgery history, and regions as covariates. Analysis was performed on a subset of subjects, which included all randomised subjects with asthma.

Secondary: Change From Baseline at Week 24 in Nasal Polyp Score: Subgroup of Subjects With Asthma

End point title	Change From Baseline at Week 24 in Nasal Polyp Score: Subgroup of Subjects With Asthma
-----------------	--

End point description:

NPS was the sum of right and left nostril scores, as evaluated by means of nasal endoscopy. For each nostril, NPS was graded based on polyp size from 0 to 4 (0 = no polyps to 4 = large polyps causing complete obstruction of the inferior nasal cavity), with a lower score indicating smaller-sized polyps. Total NPS was the sum of right and left nostril scores and ranges from 0 (no polyp) to 8 (large polyp), with highest score representing more severe disease. NPS was assessed by centralised, blinded, independent review of the nasal endoscopy video recordings. Data were analysed using a hybrid method of the WOCF and MI. LS mean and SE were obtained from ANCOVA model. Analysis was performed on a subset of subjects, which included all randomised subjects with asthma and had available data for this endpoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of the informed consent form up to end of study regardless of seriousness or relationship to investigational product. Time frame for reporting of TEAE was up to 36 weeks.

Adverse event reporting additional description:

Reported AEs are treatment emergent AEs that developed/worsened during the 'on treatment period' (from the first IMP administration to the last study drug administration + 98 days). Analysis was performed on safety population.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 May 2017	Following amendment changes were made Clarification of early treatment discontinuation language, retesting of dynamic laboratory values during screening, analysis changed to systemic corticosteroids from oral corticosteroids, EQ-5D elevated from exploratory endpoint to secondary endpoint, clarified CT scan administration to be mandatory unless not approved by local ethics committee or institutional review board, intranasal decongestants added to list of prohibited medications except as needed for nasal endoscopy procedure, study procedures could be performed over 3 days if necessary as long as the visit window was respected, updated safety language throughout the protocol to be consistent with most current safety information per latest investigators brochure: male birth control no longer required, clarified that rescue therapy prescribed by the investigator will not be provided by the Sponsor.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None reported

Notes:
