

Clinical trial results:

A multi-centre randomized, placebo-controlled trial of mirabegron, a new beta3-adrenergic receptor agonist on the progression of left ventricular mass and diastolic function in patients with structural heart disease.

Summary

EudraCT number	2015-003146-75
Trial protocol	BE DE PT GR PL FR
Global end of trial date	16 March 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 February 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 March 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to evaluate the effect of mirabegron (a new β_3 -specific agonist) on change in left ventricular mass and/or changes in diastolic function after 12 months of treatment in patients with cardiac structural remodeling with or without symptoms of heart failure (maximum NYHA II).

Protection of trial subjects:

Trial subjects are seen at regular visits with a special focus on the observation of potential adverse reactions (high blood pressure, abnormal liver and/or kidney laboratory parameters) in addition to routine (S)AE observation and clinical course of the underlying disease.

Background therapy:

Standard of care

Evidence for comparator:

In the BETA3_LVH trial, Betmiga is given in addition to standard of care treatment for patients with underlying cardiac disease at an early stage. Since the use of Betmiga in preventing further cardiac remodeling so far is not proven, the use of placebo as comparator is ethically justified.

Actual start date of recruitment	12 September 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 82
Country: Number of subjects enrolled	Portugal: 23
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	Germany: 100
Country: Number of subjects enrolled	Greece: 14
Country: Number of subjects enrolled	Italy: 41
Worldwide total number of subjects	296
EEA total number of subjects	285

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	152
From 65 to 84 years	142
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

Between September 2019 and March 2022, 380 patients were registered and 296 patients randomised for the BETA3_LVH trial.

Pre-assignment

Screening details:

A total of 380 patients were screened, from which 296 patients were enrolled and randomised.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Mirabegron
------------------	------------

Arm description:

Administration of 50 mg mirabegron once daily per os (Betmiga®, Astellas Pharma) over a period of 12 months.

Arm type	Experimental
Investigational medicinal product name	Betmiga
Investigational medicinal product code	ATC code: G04BD12
Other name	Mirabegron
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

50 mg/day

Arm title	Placebo
------------------	---------

Arm description:

Administration of placebo once daily per os over a period of 12 months.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

50 mg/day

End points

End points reporting groups

Reporting group title	Mirabegron
Reporting group description: Administration of 50 mg mirabegron once daily per os (Betmiga®, Astellas Pharma) over a period of 12 months.	
Reporting group title	Placebo
Reporting group description: Administration of placebo once daily per os over a period of 12 months.	

Primary: Left ventricular mass index

End point title	Left ventricular mass index
End point description: Two equally ranked, primary endpoints have been defined in order to assess both structural and functional aspects of left ventricular remodeling: i.e. change in left ventricular mass index (LVMI in g/m ² , defined as left ventricular mass divided by body surface) measured by cardiac MRI at baseline, 6 and 12 months after randomisation. Cardiac MRI was performed locally according to a standardized protocol, and LVMI was measured in the central MRI core lab	
End point type	Primary
End point timeframe: 12 months	

End point values	Mirabegron	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	147	148 ^[1]		
Units: g/m ²				
arithmetic mean (standard deviation)	61.2 (± 12.32)	57.7 (± 10.77)		

Notes:

[1] - 1 was excluded from primary endpoint LVMI
(all measurements missing)

Statistical analyses

Statistical analysis title	LVMI primary
Statistical analysis description: Analyses of both primary endpoints are identically structured; mean changes from baseline mean were analyzed using a repeated measurement linear mixed model without intercept containing the fixed, categorical effects of visit (baseline, 6 mo, 12 mo), treatment (verum / placebo), treatment by visit interaction, atrial fibrillation (yes / no), diabetes mellitus (yes / no), as well as a patient-specific, visit random effect (3-dim normal with a general unstructured variance covariance matrix).	
Comparison groups	Mirabegron v Placebo

Number of subjects included in analysis	295
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.079
Method	repeated measurement linear mixed model
Parameter estimate	Mean difference (final values)
Point estimate	1.295
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.152
upper limit	2.742

Primary: E/e`

End point title	E/e`
End point description:	
Two equally ranked, primary endpoints have been defined in order to assess both structural and functional aspects of left ventricular remodeling: ii. change in diastolic function, assessed as the ratio of peak early transmitral ventricular filling velocity to early diastolic tissue Doppler velocity (E/e`) measured by echocardiography at baseline, 6 and 12 months after randomisation. Echocardiography was performed locally according to a standardized protocol, and was measured in the central echocardiography core lab.	
End point type	Primary
End point timeframe:	
12 months	

End point values	Mirabegron	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	143 ^[2]	147 ^[3]		
Units: ratio				
arithmetic mean (standard deviation)	9.11 (± 2.64)	9.74 (± 3.46)		

Notes:

[2] - 4 were excluded from primary endpoint E/e` (all measurements missing)

[3] - 2 were excluded from primary endpoint E/e` (all measurements missing)

Statistical analyses

Statistical analysis title	E/e` primary
Statistical analysis description:	
mean changes from baseline mean were analyzed using a repeated measurement linear mixed model without intercept containing the fixed, categorical effects of visit (baseline, 6 months, 12 months), treatment (verum / placebo), treatment by visit interaction, atrial fibrillation (yes / no), diabetes mellitus (yes / no), as well as a patient-specific, visit random effect (3-dimensional normal with a general unstructured variance covariance matrix).
