

Clinical trial results:

A Phase 2, Double-Blind, Randomized, Placebo-Controlled Multicenter Study to Determine the Efficacy and Safety of Luspatercept (ACE-536) Versus Placebo in Adults With Non-Transfusion Dependent Beta (-) Thalassemia (The BEYOND™ Study)

Summary

EudraCT number	2015-003225-33
Trial protocol	GB GR IT
Global end of trial date	28 November 2022

Results information

Result version number	v1 (current)
This version publication date	14 December 2023
First version publication date	14 December 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 February 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 November 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of luspatercept versus placebo on anemia, as measured by mean Hb values in the absence of transfusions over continuous 12-week intervals, from Week 13 to Week 24, compared to baseline

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 February 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Thailand: 38
Country: Number of subjects enrolled	Lebanon: 17
Country: Number of subjects enrolled	Greece: 36
Country: Number of subjects enrolled	Italy: 43
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	United States: 6
Worldwide total number of subjects	145
EEA total number of subjects	79

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	140
From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

145 subjects were treated

Period 1

Period 1 title	Blinded Treatment Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Luspatercept
------------------	--------------

Arm description:

Luspatercept was administered as subcutaneous injection once every 3 weeks (administered on Study Day 1 of each 21-day treatment cycle). The starting dose level was 1.00 mg/kg and could be escalated to 1.25 mg/kg and/or reduced to 0.80, 0.60, and 0.45 mg/kg. Participants were treated for a minimum of 48 weeks.

Arm type	Experimental
Investigational medicinal product name	Luspatercept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection once every 3 weeks for at least 48 weeks. Starting dose 1.00 mg/kg

Arm title	Placebo
------------------	---------

Arm description:

Placebo (0.9% sodium chloride for injection) was administered as subcutaneous injection once every 3 weeks (administered on Study Day 1 of each 21-day treatment cycle) for a minimum of 48 weeks. Eligible participants entered an open-label phase and started Luspatercept treatment for up to approximately 24 months.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection of 0.9% sodium chloride once every 3 weeks for at least 48 weeks.

Number of subjects in period 1	Luspatercept	Placebo
Started	96	49
Completed	68	18
Not completed	28	31
Adverse event, serious fatal	1	-
Consent withdrawn by subject	17	10
Physician decision	1	-
Adverse event, non-fatal	5	4
Noncompliance with study drug	1	-
Other reasons	1	-
Lack of efficacy	2	17

Period 2

Period 2 title	Open-Label Phase
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Placebo
-----------	---------

Arm description:

Placebo (0.9% sodium chloride for injection) was administered as subcutaneous injection once every 3 weeks (administered on Study Day 1 of each 21-day treatment cycle) for a minimum of 48 weeks. Eligible participants entered an open-label phase and started Luspatercept treatment for up to approximately 24 months.

Arm type	Experimental
Investigational medicinal product name	Luspatercept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection once every 3 weeks for at least 48 weeks. Starting dose 1.00 mg/kg

Number of subjects in period 2 ^[1]	Placebo
Started	38
Completed	27
Not completed	11
Consent withdrawn by subject	6

Adverse event, non-fatal	3
Other reasons	1
Lost to follow-up	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: All participants in the Luspatercept arm completed treatment but participants in the placebo arm were eligible to receive Luspatercept treatment

Secondary: Mean Change From Baseline in Non-Transfusion Dependent β -thalassemia-Patient Reported Outcome (NTDT-PRO) Tiredness and Weakness (T/W) Domain Score (Week 13 to Week 24)

End point title	Mean Change From Baseline in Non-Transfusion Dependent β -thalassemia-Patient Reported Outcome (NTDT-PRO) Tiredness and Weakness (T/W) Domain Score (Week 13 to Week 24)
-----------------	--

End point description:

The NTDT-PRO assesses the severity of anemia-related symptoms with a daily recall of symptoms composed of 6 items: 1. Tiredness (lack of energy) when not doing physical activity 2. Tiredness when doing physical activity 3. Weakness (lack of strength) when not doing physical activity 4. Weakness when doing physical activity 5. Shortness of breath when not doing physical activity 6. Shortness of breath when doing physical activity. The Tiredness/Weakness (T/W) domain score is the average score of items 1 through 4 above. T/W domain score ranges from 0 (best outcome, no tiredness/weakness) to 10 (worst outcome, extreme tiredness/weakness). Weekly T/W Scores are the average of daily scores for that week. The mean of weekly scores over a continuous 12-week period (from Week 13 to Week

24) are compared to the T/W Domain Score at baseline. Baseline is defined as the last value taken on or before the first dose of study drug administered in Week 13.

End point title	Percentage of Participants with an Increase from Baseline ≥ 3 in Mean Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Fatigue Subscale Score (Week 13 to Week 24)
-----------------	---

End point description:

The FACIT-Fatigue, is a multidimensional, self-report quality of life instrument. It consists of 27 core items, the Functional Assessment of Cancer Therapy - General (FACT-G) questionnaire, which assesses patient function in 4 domains: Physical, Social/Family, Emotional, and Functional well-being, which is further supplemented by a 13-item measure designed to capture cancer-related fatigue, the Fatigue subscale (FS). The items are measured on a response scale with five options (0 = not at all to 4 = very much). Participants completed the questionnaire at screening and every other dose. Baseline is defined as the last value taken on or before the first dose of study drug administered in Week 13. Score is calculated by multiplying the sum of item scores by the n of items in the scale, then divided by n of items answered.

End point title	Mean Change From Baseline in the Physical Component Summary (PCS) and Mental Component Summary (MCS) Scores of the Medical Outcomes Study 36-Item Short Form (SF-36)
-----------------	--

End point description:

The SF-36v2 is a 36-item generic PRO questionnaire used to assess patient-reported outcomes. The SF-36 yields scores for 8 domains of health: Physical Functioning (PF), Role-Physical (RP), Bodily Pain (BP), General Health (GH), Vitality (VT), Social Functioning (SF), Role Emotional (RE), and Mental Health (MH) as well as physical component summary (PCS) and mental component summary (MCS) scores. Scores from each of the 8 domains of health are first normalized based on US general population means, then aggregated and transformed so that the scores from each of the 8 domains of health will contribute differently to the determination of PCS and MCS summary scores. PCS and MCS scores range from 0 to 100, with higher scores indicating a better quality of life. Baseline is defined as the last value taken on or before the first dose of study drug administered.

End point description:

Maximum Concentration (Cmax) of Luspatercept

End point type	Secondary
----------------	-----------

End point timeframe:

Doses 1 to 16: at predose (must be collected before first dose), Dose 2 Day 1, Dose 4 Day 1, Dose 6 Day 1, Dose 8 Day 1, Dose 12 Day 1, Dose 16 Day 1, Dose 6 Day 8, Dose 6 Day 15, and every 6 doses (at Dose 22, 28, etc.), up to approx. 48 months

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Pharmacokinetic data can not be assessed for the placebo arm. Thus, no data was evaluate for the placebo arm, nor was it ever planned to be according to the protocol

Reporting groups

Reporting group title	Luspatercept
-----------------------	--------------

Reporting group description:

Luspatercept was administered as subcutaneous injection once every 3 weeks (administered on Study Day 1 of each 21-day treatment cycle). The starting dose level was 1.00 mg/kg and could be escalated to 1.25 mg/kg and/or reduced to 0.80, 0.60, and 0.45 mg/kg. Participants were treated for a minimum of 48 weeks.

Reporting group title	Placebo-Luspatercept
-----------------------	----------------------

Reporting group description:

Open-label phase in which participants switched from placebo and started Luspatercept treatment for up to approximately 24 months.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Placebo (0.9% sodium chloride for injection) was administered as subcutaneous injection once every 3 weeks (administered on Study Day 1 of each 21-day treatment cycle) for a minimum of 48 weeks. Eligible participants entered an open-label phase and started Luspatercept treatment for up to approximately 24 months.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 December 2018	Added additional criteria for dose modification; description of TRV and EMH masses measurements have been clarified for consistency; exclusion criterion clarified.
12 June 2020	Open-Label Phase (OLP) added to study design; modification to PRO Minimum Clinical Important Difference (MCID) and Responder Definition (RD)Thresholds); Table of Events, Treatment Schedule and Procedures was updated to include the OLP; rationale for the key secondary endpoints were updated; clarified use of the Quality of Life questionnaire; monitoring of thromboembolic events has been added as event of interest; correction of typos.
27 April 2022	Updated morbidity-free parameters; changed open-label duration; added COVID-19 guidelines; modify medical monitor; added modification of monitoring extramedullary masses.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
