#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	12 March 2009
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 March 2009
Was the trial ended prematurely?	Yes

Notes:

---

**General information about the trial**

---

Main objective of the trial:

The primary objective of this study was to compare the safety and efficacy of Prograf/MMF and Neoral/MMF in de novo kidney transplant recipients, and to compare the safety and efficacy of MR4/MMF and Neoral/MMF in de novo kidney transplant recipients.

Protection of trial subjects:

This clinical study was written, conducted and reported in accordance with the protocol, International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH), Good Clinical Practice (GCP) Guidelines, and applicable local regulations, including the European Directive 2001/20/EC, on the protection of human rights, and with the ethical principles that have their origin in the Declaration of Helsinki. Astellas ensures that the use and disclosure of protected health information (PHI) obtained during a research study complies with the federal, national and/or regional legislation related to the privacy and protection of personal information.

Background therapy:

All participants were to have received mycophenolate mofetil (MMF) and corticosteroids concomitantly with the randomized study drug. Additionally, all participants were to have received induction therapy (basiliximab). Antibody induction with basiliximab 20 mg was administered intravenously on day 0 (first dose could have been administered before skin closure), a second dose was to have been administered between days 3 to 5. Corticosteroid administration was to be initiated on day 0 (500-1000 mg methylprednisolone intravenous bolus or equivalent dose) with oral administration of 200 mg methylprednisolone (or equivalent) on day 1 and subsequent tapering to achieve a targeted mean prednisone equivalent after the first 3 months of 5 to 10 mg/day.

Evidence for comparator: -

Actual start date of recruitment	29 June 2003
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Brazil: 92
Country: Number of subjects enrolled	Canada: 28
Country: Number of subjects enrolled	United States: 548
Worldwide total number of subjects	668
EEA total number of subjects	0

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	3
Adults (18-64 years)	594
From 65 to 84 years	71
85 years and over	0

---

## Subject disposition

### Recruitment

Recruitment details:

This was a 3 arm randomized, open-label, comparative, multi-center study in de novo kidney transplant recipients at 60 centers in the U.S., Canada and Brazil. De novo kidney transplant recipients 12 years of age and older were randomized in a 1:1:1 ratio to 1 of 3 treatment arms.

### Pre-assignment

Screening details:

The study consisted of a 1-year post-transplant efficacy and safety study with a clinical continuation phase of a minimum of 2 years or until commercial availability of tacrolimus modified release, unless the Data Safety Monitoring Board or sponsor specified otherwise. The sponsor discontinued the study in March 2009.

### Period 1

Period 1 title	One year post-transplant
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This was an open label study.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Tacrolimus

Arm description:

Participants received a first dose of tacrolimus between 0.075 and 0.10 mg/kg twice daily, orally prior to or within 48 hours of the completion of the transplant procedure, and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Arm type	Experimental
Investigational medicinal product name	Tacrolimus
Investigational medicinal product code	FK506
Other name	Prograf
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received a first dose of tacrolimus between 0.075 and 0.10 mg/kg twice daily, orally prior to or within 48 hours of the completion of the transplant procedure, and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events within a target whole blood tacrolimus trough level range of 7 to 16 ng/mL for the first 90 days post-transplant and 5 to 15 ng/mL thereafter. Participants unable to take the first dose of study drug orally or via a nasogastric tube within 48 hours following completion of the transplant procedure were discontinued from the study.

Investigational medicinal product name	Mycophenolate Mofetil
Investigational medicinal product code	
Other name	CellCept, MMF
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The first dose of Mycophenolate Mofetil (MMF) was to be administered orally or intravenously prior to, or within 48 hours of, completion of the transplant procedure. Subsequent MMF was administered in 2 equal oral doses 12 hours apart (1 g); MMF up to 1.5 g twice daily was permitted in African American/black participants. Dose-equivalent 3 or 4 times daily was permitted at the investigator's discretion if clinically indicated. Dose changes for adverse events were permitted at the investigator's discretion if clinically indicated.

<b>Arm title</b>	Tacrolimus Modified Release (MR)
------------------	----------------------------------

Arm description:

Participants received a first dose of tacrolimus modified release between 0.15 and 0.20 mg/kg/day, given as a single oral dose in the morning, prior to or within 48 hours following the completion of the transplant procedure, and subsequently as once daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Arm type	Active comparator
Investigational medicinal product name	Tacrolimus Modified Release (MR)
Investigational medicinal product code	FK506
Other name	Advagraf, FKMR, MR4, Astagraf XL
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received a first dose of tacrolimus modified release (MR4) between 0.15 and 0.20 mg/kg/day, given as a single oral dose in the morning, prior to or within 48 hours following the completion of the transplant procedure, and subsequently as once daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events within a target whole blood tacrolimus trough level range of 7 to 16 ng/mL for the first 90 days post-transplant and 5 to 15 ng/mL thereafter. Participants unable to take the first dose of study drug orally or via a nasogastric tube within 48 hours following completion of the transplant procedure were discontinued from the study.

Investigational medicinal product name	Mycophenolate Mofetil
Investigational medicinal product code	
Other name	CellCept, MMF
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The first dose of Mycophenolate Mofetil (MMF) was to be administered orally or intravenously prior to, or within 48 hours of, completion of the transplant procedure. Subsequent MMF was administered in 2 equal oral doses 12 hours apart (1 g); MMF up to 1.5 g twice daily was permitted in African American/black participants. Dose-equivalent 3 or 4 times daily was permitted at the investigator's discretion if clinically indicated. Dose changes for adverse events were permitted at the investigator's discretion if clinically indicated.

<b>Arm title</b>	Cyclosporine
------------------	--------------

Arm description:

Participants received a first dose of cyclosporine between 4 to 5 mg/kg orally prior to or within 48 hours following the completion of the transplant procedure and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Arm type	Active comparator
Investigational medicinal product name	Cyclosporine
Investigational medicinal product code	
Other name	Cyclosporine, Neoral, CsA
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received a first dose of cyclosporine between 4 to 5 mg/kg orally prior to or within 48 hours following the completion of the transplant procedure and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events within a target whole blood trough level range of 125 to 400 ng/mL for the first 90 days post-transplant and 100 to 300 ng/mL thereafter. Participants unable to take the first dose of study drug orally or via a nasogastric tube within 48 hours following completion of the transplant procedure were discontinued from the study.

Investigational medicinal product name	Mycophenolate Mofetil
Investigational medicinal product code	
Other name	CellCept, MMF
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

The first dose of Mycophenolate Mofetil (MMF) was to be administered orally or intravenously prior to, or within 48 hours of, completion of the transplant procedure. Subsequent MMF was administered in 2 equal oral doses 12 hours apart (1 g); MMF up to 1.5 g twice daily was permitted in African American/black participants. Dose-equivalent 3 or 4 times daily was permitted at the investigator's discretion if clinically indicated. Dose changes for adverse events were permitted at the investigator's discretion if clinically indicated.

<b>Number of subjects in period 1</b>	Tacrolimus	Tacrolimus Modified Release (MR)	Cyclosporine
Started	219	226	223
Received Study Drug	212	214	212
Completed	212	214	212
Not completed	7	12	11
Did not receive study drug	7	12	11

**Period 2**

Period 2 title	Full Analysis Set (FAS) for baseline
Is this the baseline period?	Yes <sup>[1]</sup>
Allocation method	Randomised - controlled
Blinding used	Not blinded

**Blinding implementation details:**

This was an open label study. The FAS was defined as all randomized participants who received at least one dose of study drug, was part of the one year post-transplant period and was only added here for baseline characteristics reporting purposes.

**Arms**

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Tacrolimus

**Arm description:**

Participants received a first dose of tacrolimus between 0.075 and 0.10 mg/kg twice daily, orally prior to or within 48 hours of the completion of the transplant procedure, and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. ## End points

### End points reporting groups

Reporting group title	Tacrolimus
-----------------------	------------

Reporting group description:

Participants received a first dose of tacrolimus between 0.075 and 0.10 mg/kg twice daily, orally prior to or within 48 hours of the completion of the transplant procedure, and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Tacrolimus Modified Release (MR)
-----------------------	----------------------------------

Reporting group description:

Participants received a first dose of tacrolimus modified release between 0.15 and 0.20 mg/kg/day, given as a single oral dose in the morning, prior to or within 48 hours following the completion of the transplant procedure, and subsequently as once daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Cyclosporine
-----------------------	--------------

Reporting group description:

Participants received a first dose of cyclosporine between 4 to 5 mg/kg orally prior to or within 48 hours following the completion of the transplant procedure and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Tacrolimus
-----------------------	------------

Reporting group description:

Participants received a first dose of tacrolimus between 0.075 and 0.10 mg/kg twice daily, orally prior to or within 48 hours of the completion of the transplant procedure, and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Tacrolimus Modified Release (MR)
-----------------------	----------------------------------

Reporting group description:

Participants received a first dose of tacrolimus modified release between 0.15 and 0.20 mg/kg/day, given as a single oral dose in the morning, prior to or within 48 hours following the completion of the transplant procedure, and subsequently as once daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Cyclosporine
-----------------------	--------------

Reporting group description:

Participants received a first dose of cyclosporine between 4 to 5 mg/kg orally prior to or within 48 hours following the completion of the transplant procedure and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Tacrolimus
-----------------------	------------

Reporting group description:

Participants received a first dose of tacrolimus between 0.075 and 0.10 mg/kg twice daily, orally prior to or within 48 hours of the completion of the transplant procedure, and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Tacrolimus Modified Release (MR)
-----------------------	----------------------------------

Reporting group description:

Participants received a first dose of tacrolimus modified release between 0.15 and 0.20 mg/kg/day, given as a single oral dose in the morning, prior to or within 48 hours following the completion of the transplant procedure, and subsequently as once daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Cyclosporine
-----------------------	--------------

Reporting group description:

Participants received a first dose of cyclosporine between 4 to 5 mg/kg orally prior to or within 48 hours following the completion of the transplant procedure and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events.

### Primary: Percentage of participants with Efficacy Failure

End point title	Percentage of participants with Efficacy Failure
End point description:	
Efficacy failure is defined as any participant who died, experienced a graft failure (permanent return to dialysis [ $> 30$ days] or retransplant), had a biopsy-confirmed (Banff Grade $\geq$ I) acute rejection (BCAR), or was lost to follow-up. Biopsies were graded according to the 1997 Banff criteria: Borderline: No intimal arteritis present but foci of mild tubulitis; Grade I: Significant interstitial infiltration and foci of moderate to severe tubulitis; Grade II: Mild to severe intimal arteritis Grade III: Transmural arteritis and/or arterial fibrinoid change and necrosis of medial smooth muscle cells with accompanying lymphocytic infiltrate in vessel. The number of participants analyzed represents the full analysis set (FAS), defined as all randomized patients who received at least one dose of study drug.	
End point type	Primary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 1941 days

Adverse event reporting additional description:

An adverse event (AE) was defined as any reaction, side effect, or other untoward medical occurrence, regardless of the relationship to study drug, which occurred during the conduct of the study. Clinically significant adverse changes in clinical status, ECGs, routine labs, x-rays, physical examinations, etc., were considered adverse events.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	6.1
--------------------	-----

### Reporting groups

Reporting group title	Tacrolimus
-----------------------	------------

Reporting group description:

Participants received a first dose of tacrolimus between 0.075 and 0.10 mg/kg twice daily, orally prior to or within 48 hours of the completion of the transplant procedure, and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Cyclosporine
-----------------------	--------------

Reporting group description:

Participants received a first dose of cyclosporine between 4 to 5 mg/kg orally prior to or within 48 hours following the completion of the transplant procedure and subsequently as twice daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events.

Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Reporting group title	Tacrolimus Modified Release
-----------------------	-----------------------------

Reporting group description:

Participants received a first dose of tacrolimus modified release between 0.15 and 0.20 mg/kg/day, given as a single oral dose in the morning, prior to or within 48 hours following the completion of the transplant procedure, and subsequently as once daily oral doses adjusted based on clinical evidence of efficacy, blood concentrations of tacrolimus and adverse events. Participants also received 1.0 g mycophenolate mofetil orally twice daily throughout the study.

Hypokalaemia			
subjects affected / exposed	31 / 212 (14.62%)	33 / 212 (15.57%)	31 / 214 (14.49%)
occurrences (all)	37	47	39
Hypomagnesaemia			
subjects affected / exposed	57 / 212 (26.89%)	44 / 212 (20.75%)	52 / 214 (24.30%)
occurrences (all)	79	57	71
Hypophosphataemia			
subjects affected / exposed	59 / 212 (27.83%)	45 / 212 (21.23%)	50 / 214 (23.36%)
occurrences (all)	65	52	56
Metabolic acidosis			
subjects affected / exposed	12 / 212 (5.66%)	11 / 212 (5.19%)	15 / 214 (7.01%)
occurrences (all)	15	13	19

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 May 2003	Amendment 1 (May 8, 2003) involved the following changes to the original protocol: <ul style="list-style-type: none"><li>· Dosing amounts, schedules, and routes of administration were modified.</li><li>· Inclusion and exclusion criteria were modified.</li><li>· The study visit schedule for the initial treatment period was modified.</li><li>· Hepatic profile sample collection times were modified.</li><li>· Tests performed at central laboratories were clarified.</li><li>· Sponsor personnel contact information was updated.</li><li>· Typographical errors were corrected and minor clerical changes were incorporated.</li></ul>
13 November 2003	Amendment 2 (November 13, 2003) involved the following changes: <ul style="list-style-type: none"><li>· The primary and secondary efficacy assessments were modified.</li><li>· A section describing interim analyses was added.</li><li>· The inclusion criteria were clarified.</li><li>· Descriptions of statistical analyses were modified.</li><li>· The follow-up duration for adverse events was clarified.</li><li>· Typographical errors were corrected and minor clerical changes were incorporated.</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The clinical continuation phase was terminated by the Sponsor.
