Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 November 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 March 2018
Global end of trial reached?	Yes
Global end of trial date	23 November 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The amended primary objectives for parts A and B were to investigate the safety and tolerability of the combination of AZD2014 and palbociclib on a background of fulvestrant in patients with locally advanced/metastatic ER positive breast cancer and to define the combination dose(s)/schedule(s) for further clinical evaluation.

Protection of trial subjects:

The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and are consistent with International Conference on Harmonisation (ICH) Good Clinical Practice guidance, applicable regulatory requirements and the AstraZeneca policy on Bioethics and Human Biological Samples.

Precautions were taken to preserve confidentiality and prevent genetic data being linked to the identity of the subject.

An Institutional Review Board (IRB) or Ethics Committee reviewed and approved the study protocol, as well as the Informed Consent Form document and other written information provided to the subjects.

Background therapy:

All patients received Fulvestrant 500 mg by intramuscular injection on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles. Additionally all patients received Palbociclib administered orally with food orally, once daily on days 1-21 of a 28 day cycle (alternative frequencies were instigated in some cohorts - 7 days on, 7 days off on a 28 day cycle).

Evidence for comparator:

Fulvestrant (Faslodex®) has been approved by regulatory agencies in both the US and the UK for treatment of:

- Hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative advanced breast cancer in postmenopausal women not previously treated with endocrine therapy.
- HR-positive advanced breast cancer in postmenopausal women with disease progression following endocrine therapy.
- HR-positive, HER2-negative advanced or metastatic breast cancer in postmenopausal women in combination with ribociclib, as initial endocrine based therapy or following disease progression on endocrine therapy.
- HR-positive, HER2-negative advanced or metastatic breast cancer in combination with palbociclib or abemaciclib in women with disease progression after endocrine therapy.

Palbociclib (Ibrance®) has been approved by regulatory agencies in both the US and the UK for treatment of adults with HR+, HER2- breast cancer that has spread to other parts of the body (metastatic) in combination with an aromatase inhibitor as the first hormonal based therapy in postmenopausal women or in men, or fulvestrant with disease progression following hormonal therapy.

Actual start date of recruitment	01 December 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 29
Country: Number of subjects enrolled	United Kingdom: 25
Worldwide total number of subjects	54
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	19
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Fifty-four (54) patients were enrolled in the study and received treatment at 7 sites in the US and the UK between 19 January 2016 and 26 September 2017. The last visit of the last patient for data collection occurred on 27 March 2018.

Pre-assignment

Screening details:

Fifty-four (54) patients passed the screening criteria and received treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 (Part A)

Arm description:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Arm type	Experimental
Investigational medicinal product name	Vistusertib
Investigational medicinal product code	AZD2014
Other name	AZD2014
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Arm title	Cohort 2 (Part A)
------------------	-------------------

Arm description:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Arm type	Experimental
Investigational medicinal product name	Vistusertib
Investigational medicinal product code	AZD2014
Other name	AZD2014
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Arm title	Cohort 3 (Part A)
------------------	-------------------

Arm description:

Vistusertib 75 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Vistusertib
Investigational medicinal product code	AZD2014
Other name	AZD2014
Pharmaceutical forms	Film-coated tablet

End points reporting groups

Reporting group title	Cohort 1 (Part A)
Reporting group description: Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.	
Reporting group title	Cohort 2 (Part A)
Reporting group description: Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.	
Reporting group title	Cohort 3 (Part A)
Reporting group description: Vistusertib 75 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.	
Reporting group title	Cohort 4 (Part A)
Reporting group description: Vistusertib 50 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.	
Reporting group title	Cohort 5 Low ANC (Part A)
Reporting group description: Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-7, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.	
Reporting group title	Cohort 6 High ANC (Part A)
Reporting group description: Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.	
Reporting group title	Cohort 7 (Part B)
Reporting group description: Vistusertib 75 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.	
Subject analysis set title	Full Analysis Set
Subject analysis set type	Full analysis
Subject analysis set description: The Full Analysis Set includes all patients who received at least 1 dose of study medication.	
Subject analysis set title	Safety Analysis Set
Subject analysis set type	Safety analysis
Subject analysis set description: The Safety Analysis Set includes all patients who received at least 1 dose of AZD2014 or palbociclib.	
Subject analysis set title	Pharmacokinetics Analysis Set
Subject analysis set type	Per protocol
Subject analysis set description: The Pharmacokinetics Analysis Set includes all dosed patients with reportable AZD2014 or palbociclib concentrations. However, the number of participants with reportable data varies between PK parameters. Single-dose PK parameters were only determined in Part A, Cohorts 1-4.	
Subject analysis set title	Evaluable for Response
Subject analysis set type	Sub-group analysis
Subject analysis set description: The Evaluable for Response analysis set includes all patients who received at least one dose of vistusertib, palbociclib, or fulvestrant with measurable disease at baseline as per RECIST 1.1.	
Subject analysis set title	Evaluable for Efficacy
Subject analysis set type	Sub-group analysis

Subject analysis set description:

The Evaluable for Efficacy Analysis Set includes all patients who received at least 1 dose of study medication and who had efficacy data.

Primary: Number of participants who experienced an adverse event.

End point title	Number of participants who experienced an adverse event. ^[1]

Statistical analyses

No statistical analyses for this end point

Secondary: Progression Free Survival (Part B)

End point title Progression Free Survival (Part B)^[22]

End point description:

Progression (or Progressive Disease) is defined by the Response Evaluation Criteria in Solid Tumors (RECIST) v1.1. Progressive disease is declared when there is at least a 20% increase in the sum of the longest diameter (LD) of target lesions, taking as reference the smallest sum LD recorded since the treatment started or the appearance of one or more new lesions. Progression Free Survival is the elapsed time from the start of treatment until progression as defined by RECIST v1.1 or death from any cause. This analysis was conducted on the Evaluable for Efficacy Analysis Set.

End point type Secondary

End point timeframe:

Assessed every 8 weeks for approximately 16 months

Notes:

[22] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Progression Free Survival was only assessed in Part B.

End point values	Cohort 7 (Part B)			
Subject group type	Reporting group

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events data were collected throughout the life of the trial, until the data cut-off in March 2018.

Adverse event reporting additional description:

All serious adverse events are reported, regardless of causality or frequency. All other AEs (excluding SAEs) that were reported in $\geq 5\%$ of participants in any cohort are reported, regardless of causality or severity. Adverse events are reported for the Safety Analysis Set comprised of all participants who received at least one dose of treatment.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Cohort 1 (Part A)
-----------------------	-------------------

Reporting group description:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Reporting group title	Cohort 2 (Part A)
-----------------------	-------------------

Reporting group description:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Reporting group title	Cohort 3 (Part A)
-----------------------	-------------------

Reporting group description:

Vistusertib 75 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Reporting group title	Cohort 7 (Part B)
-----------------------	-------------------

Reporting group description:

Vistusertib 75 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Reporting group title	Cohort 5 Low ANC (Part A)
-----------------------	---------------------------

Reporting group description:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-7, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Reporting group title	Cohort 6 High ANC (Part A)
-----------------------	----------------------------

Reporting group description:

Vistusertib 100 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 100 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

Reporting group title	Cohort 4 (Part A)
-----------------------	-------------------

Reporting group description:

Vistusertib 50 mg BD (Days 1 and 2, then off for 5 days each week). Palbociclib 75 mg QD (Days 1-21, then off 7 days). Fulvestrant 500 mg on Cycle 1, Days 1 and 15 and Day 1 only for subsequent cycles.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 September 2015	<p>Protocol Amendment 1:</p> <p>1) The protocol was amended to include ophthalmological assessments and more intensive blood glucose monitoring in order to address the potential for overlapping toxicities associated with combination therapy with palbociclib and vistusertib and the potential for sustained hyperglycemia with accompanying visual toxicity.</p> <p>2) The protocol was amended to add information regarding patients receiving a sensitive CYP3A substrate with a narrow therapeutic index may need to be have the dose of the agent reduced as palbociclib may increase their exposure to it. 3) The protocol was amended to specify that any case of elevated AST or ALT ($\geq 3 \times$ ULN) and total bilirubin ($\geq 2 \times$ ULN) (Hy's Law) is defined to be a DLT since there was a liver safety concern. 4) To protect against the possibility of a study-wide type I error the protocol was amended to specify that if p-values were calculated at the time of the administrative interim analysis in Part C, the Haybittle-Peto boundary (p-value significance threshold of 0.001) to the endpoint of the planned Part C analysis was to be used.</p>
03 December 2015	<p>Protocol Amendment 2: 1) The protocol was amended to include fulvestrant as an Investigational Medicinal Product. Further, the duration of safety follow-up was increased to to 5 times the half-life of fulvestrant (250 days following last dose). 2) The protocol was amended to specify that patients under 50 years of age were required to have medically-confirmed irreversible premature ovarian failure, bilateral oophorectomy, bilateral salpingectomy, or complete or partial hysterectomy. 3) Virology for Hepatitis B, Hepatitis C and Human Immunodeficiency Virus (HIV) assessments were added to the screening tests and patients with these infections were excluded from the study. 4) The following criteria were added as a required parameter before retreatment after interruption for toxicity or at the start of each treatment cycle: alanine aminotransferase (ALT) and aspartate aminotransferase (AST) < 2.0 times the upper limit of normal (ULN) (CTCAE Grade 1) or back to baseline values and total bilirubin <1.5 x ULN (CTCAE Grade 1) or back to baseline values.</p>

16 December 2015	<p>Amendment 3: Improve the feasibility of the study by permitting patients to be enrolled in Part A who have received prior fulvestrant, everolimus or agents with a MOA through inhibition of the PI3K-mTOR pathway.</p> <p>Further changes or clarifications include: 1) Amended Exclusion Criterion # 6 to make it specific to protocol Parts B and C. This now permits inclusion into Part A for patients who have received priortreatment with fulvestrant, or with everolimus, or any agent whose mechanism of action is to inhibit the PI3K-mTOR pathway. 2) Clarification that patients from Part A who will be included in the Part B1 assessment of recommended phase 2 dose must meet the specific eligibility for Part B1, in addition to having measurable disease evaluable for response. 3) Amended Overall Benefit/Risk and Ethical Assessment Conclusion: Clarification that the starting dose for palbociclib is one dose level below the standard dose for palbociclib. 4) Modified Exclusion Criterion # 2 to permit patients to enter the study who have been exposed to potent or moderate inhibitors or inducers of CYP2C8 taken within the wash-out period before the first dose. 5) Updated protocol to remove restrictions around CYP2C8 inhibitors and inducers. 6) Amended protocol to remove 1 day window for visits with palbociclib or AZD2014 PK assessments during Part B2 and Part C. 7) The Schedule of assessments was updated to require ECG, Biochemistry and Haematology, Coagulation, Lipid Panel, Glucose and Insulin C-Peptide to be done at Cycle 0 Day 1 in Part B3. 8) Amended Table 34 to state that all dosed patients with reportable AZD2014, palbociclib or fulvestrant plasma concentrations will be included in the PK analysis set, regardless of whether they have available PK parameters. 9) Clarification that the rules are the same for handling PK parameters and plasma concentrations at a given timepoint, which for example, have non-quantifiable values.</p>
16 December 2016	<p>Note - There was no amendment 4 due to a change in the protocol template whereby updated protocols were referred to a "versions" rather than amendments.</p> <p>Version 5: 1) The protocol was amended to remove Parts B2 and B3. This was no longer considered required. 2) The protocol was amended to remove fulvestrant PK sampling. 3) The protocol was modified to allow flexibility to test alternative dosing schedules of AZD2014 and palbociclib in Part A, and to apply those schedules to Parts B and C. 4) The protocol was modified to remove the AZD2014 monotherapy period (Cycle 0) for the assessment of single dose PK from Part B (formerly Part B1) as this was no longer considered required because the data was already available for the program through PK/PD modelling and to avoid collection of unnecessary samples from patients. 5) The protocol was amended to prohibit PPI use in the drug interaction (DDI) and dose limiting toxicity (DLT) evaluation period since PPIs may reduce palbociclib Cmax and AUC by 41% and 13%, respectively and could affect the DDI evaluation and MTD determination of the combination. 6) The protocol was updated to conform to current guidance for investigators, as a clinically relevant PK drug interaction with sensitive substrates of P450 enzymes and transporters is unlikely. 7) The sample size of Part B was increased from 9-15 to 27 patients in order to allow internal decision making at the end of Part B based on Clinical Benefit Rate (CBR). 8) The protocol was amended to allow enrollment of a different patient population for Part B to understand tolerability in a population that is more in line with the proposed Part C population. 9) The protocol was amended to allow flexibility in Part A to enroll additional cohorts for patients with specific ranges of neutrophil (ANC). The rationale for this was the hypothesis that baseline ANC value may be a risk factor for a DLT.</p>

14 June 2017	Protocol Version 6: 1) Consent to tumor biopsy was made a mandatory part of the study. The study design, exploratory objectives and end points, inclusion criteria, study plan, description of biopsy collection, and description of the analysis sets were updated. 2) The guidelines for dose modifications and interruptions, Appendix N, were revised so that dose modifications could be made in consultation with the AZ Medical Director as well as the Sarah Cannon Development Innovations medical monitor and that dose interruption decisions can be made by the Investigator on a case by case basis. In addition the recommendation for dose interruption in the case of uncomplicated Grade 3 neutropenia was removed and there was clarification that dose interruption in the case of QTc prolongation and hematological events should be assessed based on severity. 3) The safety portion of the protocol was updated to clarify the overdose reporting process by directing that overdoses should be reported on the Overdose Reporting Form. 4) The protocol was amended to allow patients to have extended vital signs monitoring done during long PK days or only up to the point that they leave the clinic. 5) Amended to allow patients to have last fasting glucose at the time of leaving the clinic if they are not staying overnight for assessment.'
12 December 2017	Protocol Version 7: 1) The protocol was amended to end enrollment in Part B after 17 patients and not to perform the Futility Interim analysis. This decision was made based on the result of a strategic portfolio review by the sponsor. Further, Part C of the protocol was removed. No patients were enrolled into Part C. 2) The protocol was amended to establish the primary data cut-off after the Cycle 7 Day 1 visit for the last patient enrolled in the study. Following the data cut-off patients continued to receive study treatment and attended for dispensing and SAE reporting. Assessments were no longer performed for the purposes of the study after the data cut-off, instead assessments were only as per standard of care in accordance with the palbociclib label or as clinically indicated. This decision was made based on the result of a strategic portfolio review.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

In cases where the upper limit of a Confidence Interval could not be calculated the value 99999.9 was entered because the software does not permit no numeric entries such as NC (not calculated) or NA (not available)
