

## Clinical trial results: CORTICO-COP (CORTICosteroid reduction in COPD) trial Summary

EudraCT number	2015-003441-26
Trial protocol	DK
Global end of trial date	06 February 2019

### Results information

Result version number	v1 (current)
This version publication date	28 December 2020
First version publication date	28 December 2020

### Trial information

#### Trial identification

Sponsor protocol code	Protocol_CORTICO-COP_PSJUI
-----------------------	----------------------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02857842
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	COPTRIN
Sponsor organisation address	Kildegårdsvej 28, Hellerup, Denmark, 2900
Public contact	Pradeesh Sivapalan, MD, PhD, Lungemedicinsk afdeling, Herlev-Gentofte Hospital, 0045 38674215, pradeesh.s@dadlnet.dk
Scientific contact	Pradeesh Sivapalan, MD, PhD, Lungemedicinsk afdeling, Herlev-Gentofte Hospital, 0045 38674215, pradeesh.s@dadlnet.dk

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 February 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 September 2018
Global end of trial reached?	Yes
Global end of trial date	06 February 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The purpose is to examine whether we can reduce the accumulated corticosteroid therapy to the individual COPD patient with the aim of reducing the number of corticosteroid-related adverse events.

Protection of trial subjects:

Monitoring safety data, e.g. all adverse events.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 August 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Scientific research
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 318
Worldwide total number of subjects	318
EEA total number of subjects	318

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	318
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Between Aug 3, 2016, and Sept 30, 2018, we screened 1363 patients. Patients were recruited and followed up between August 2016 and January 2019.

### Pre-assignment

Screening details:

Eligible participants were patients included within 24h of admission to the participating sites, aged at least 40 years, with known airflow limitation (defined as a postbronchodilator FEV<sub>1</sub>/forced vital capacity [FVC] ratio  $\leq 0.70$ ) and a specialist-verified diagnosis of COPD, who were designated to start on systemic corticosteroids by the respiratory

### Period 1

Period 1 title	Eosinophil-guided group (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Control group

Arm description:

This group received standard treatment and 5 days of oral corticosteroids.

Arm type	Standard care of 5 days oral corticosteroids
Investigational medicinal product name	Methylprednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

All patients recruited for the trial received an initial dose of systemic corticosteroids on day 1, followed by 37.5 mg of prednisolone oral tablet daily in 5 days.

<b>Arm title</b>	Experimental
------------------	--------------

Arm description:

The eosinophil-guided group were from the second day given 37.5 mg of prednisolone oral tablet daily (for a maximum of up to 4 days) on days when their blood eosinophil count was at least  $0.3 \times 10^9$  cells per L. On days when the eosinophil count was lower, prednisolone was not administered.

Arm type	Experimental
Investigational medicinal product name	Methylprednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Infusion
Routes of administration	Oral use, Intravenous use

Dosage and administration details:

All patients recruited for the trial received an initial dose of systemic corticosteroids on day 1, followed by 37.5 mg of prednisolone oral tablet daily (for a maximum of up to 4 days) on days when their blood eosinophil count was at least  $0.3 \times 10^9$  cells per L. On days with eosinophil counts less than  $0.3 \times 10^9$  cells per L, systemic corticosteroids were not administered.

<b>Number of subjects in period 1</b>	Control group	Experimental
Started	159	159
Completed	159	159

## Baseline characteristics

### Reporting groups

Reporting group title	Control group
Reporting group description: This group received standard treatment and 5 days of oral corticosteroids.	
Reporting group title	Experimental
Reporting group description: The eosinophil-guided group were from the second day given 37.5 mg of prednisolone oral tablet daily (for a maximum of up to 4 days) on days when their blood eosinophil count was at least $0.3 \times 10$ cells per L. On days when the eosinophil count was lower, prednisolone was not administered.	

Reporting group values	Control group	Experimental	Total
Number of subjects	159	159	318
