Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 January 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 January 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial is to compare the efficacy of brigatinib to that of crizotinib in anaplastic lymphoma kinase (ALK) plus locally advanced or metastatic non-small-cell lung cancer (NSCLC) participants naive to ALK inhibitors, as evidenced by PFS.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 7
Country: Number of subjects enrolled	Hong Kong: 16
Country: Number of subjects enrolled	Singapore: 6
Country: Number of subjects enrolled	Korea, Republic of: 57
Country: Number of subjects enrolled	Taiwan: 21
Country: Number of subjects enrolled	Austria: 9
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Germany: 17
Country: Number of subjects enrolled	Italy: 38
Country: Number of subjects enrolled	Luxembourg: 1
Country: Number of subjects enrolled	Netherlands: 11
Country: Number of subjects enrolled	Norway: 2
Country: Number of subjects enrolled	Spain: 31
Country: Number of subjects enrolled	Sweden: 1
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	United Kingdom: 18
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	United States: 23
Worldwide total number of subjects	275
EEA total number of subjects	124

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	188
From 65 to 84 years	84
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 92 investigative sites in Australia, Hong Kong, Singapore, South Korea, Taiwan, Austria, Denmark, France, Germany, Italy, Luxembourg, Netherlands, Norway, Spain, Sweden, Switzerland, United Kingdom, Canada, and the United States of America from 26 May 2016 to 29 January 2021.

Pre-assignment

Screening details:

ALK+NSCLC participants who had not received ALK-targeted tyrosine kinase inhibitor(TKI)enrolled(1:1ratio) to receive brigatinib 90mg for 7 days followed by180mg or crizotinib250mg.Crizotinib arm participants with progressive disease(PD) or received radiotherapy to brain(Randomized Phase) were crossed over to brigatinib90mg/180mg(Crossover Phase).

Period 1

Period 1 title	Randomized Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Randomized Phase: Brigatinib 90 mg QD/180 QD

Arm description:

Brigatinib 90 mg, tablets, orally, once daily (QD) for first 7 days followed by 180 mg, orally, QD, in each 28-day cycle until disease progression (PD), intolerable toxicity, consent withdrawal, or death (The median duration of exposure was 34.86 months).

Arm type	Experimental
Investigational medicinal product name	Brigatinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Brigatinib tablets

Arm title	Randomized Phase: Crizotinib 250 mg BID
------------------	-----------------------------------------

Arm description:

Crizotinib 250 mg, tablets, twice daily (BID) in each 28-day cycle until disease progression, intolerable toxicity, consent withdrawal, or death (The median duration of exposure was 9.26 months).

Arm type	Active comparator
Investigational medicinal product name	Crizotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Crizotinib tablets

Number of subjects in period 1	Randomized Phase: Brigatinib 90 mg QD/180 mg QD	Randomized Phase: Crizotinib 250 mg BID
Started	137	138
Safety Analysis Set	136	137
Completed	20	84
Not completed	117	54
Consent withdrawn by subject	16	6
Never Treated	1	1
Site Terminated by Sponsor	58	16
Died	41	29
Lost to follow-up	-	1
Reason not Specified	1	1

Period 2

Period 2 title	Crossover Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Crossover Phase: Brigatinib 90 mg QD/180 mg QD
------------------	------------------------------------------------

Arm description:

Participants who experienced PD as assessed by the blinded Independent Review Committee (BIRC) or received radiotherapy to the brain while on 'Crizotinib 250 mg BID' therapy in Randomized Phase were crossed over. Following 10-day washout period, crossover participants received brigatinib 90 mg, tablets, orally, QD for first 7 days followed by 180 mg, tablets, orally, QD in each 28-day cycle up to end of the study (The median duration of exposure was 17.25 months).

Arm type	Experimental
Investigational medicinal product name	Brigatinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Brigatinib tablets

Number of subjects in period 2^[1]	Crossover Phase: Brigatinib 90 mg QD/180 mg QD
Started	65
Completed	10
Not completed	55
Withdrew Consent	9
Physician decision	1
Site Terminated by Sponsor	23
Died	22

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Participants from crizotinib arm who experienced progressive disease (PD) or received radiotherapy to the brain in Randomized Phase crossed over to brigatinib in the Crossover Phase.

Units: months				
median (confidence interval 95%)	24.016 (18.46 to 43.20)	16.821 (10.12 to 23.85)	11.072 (9.13 to 13.01)	

Statistical analyses

Statistical analysis title	Statistical Analysis for PFS
Comparison groups	Randomized Phase: Brigatinib 90 mg QD/180 QD v Randomized Phase: Crizotinib 250 mg BID
Number of subjects included in analysis	275
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	< 0.0001 ^[2]
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.481
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.35
upper limit	0.66

Notes:

[1] - The hazard ratio was obtained using a Cox proportional hazards model with randomization stratification factors (current) as covariates.

[2] - P-values are from a log-rank test stratified by randomization stratification factors (current; presence of intracranial central nervous system (iCNS) metastases at baseline and prior chemotherapy for locally advanced or metastatic disease).

Secondary: Confirmed Objective Response Rate (ORR)

End point title	Confirmed Objective Response Rate (ORR)
End point description:	ORR was defined as percentage of participants who achieved Complete response (CR) or Partial responses (PR) using Response Evaluation Criteria in Solid Tumors (RECIST) version (v). 1.1 criteria. CR is defined as disappearance of all extranodal target and non-target lesions. All pathological lymph nodes must have decreased to less than (<) 10 mm in short axis for target lesions and all lymph nodes must be non-pathological in size (<10 mm short axis), normalization of tumor marker level for non-target lesions. PR is at least a 30% decrease in SLD of target lesions, taking as reference baseline sum diameters. ITT Population included all participants randomized to each regimen regardless of whether they tested ALK+, or whether they received study drug or adhered to the assigned dose.
End point type	Secondary
End point timeframe:	
Baseline up to end of treatment (Up to 36 months)	

End point values	Randomized Phase: Brigatinib 90 mg QD/180 QD	Crossover Phase: Brigatinib 90 mg QD/180 mg QD	Randomized Phase: Crizotinib 250 mg BID	
Subject group type	Reporting group	Reporting group	Reporting group

Units: percentage of participants				
number (confidence interval 95%)	74.5 (66.30 to 81.52)	56.9 (44.04 to 69.15)	62.3 (53.68 to 70.42)	

Statistical analyses

Statistical analysis title	Statistical Analysis for ORR
Comparison groups	Randomized Phase: Brigatinib 90 mg QD/180 QD v Randomized Phase: Crizotinib 250 mg BID
Number of subjects included in analysis	275
Analysis specification	Pre-specified
Analysis type	superiority ^[3]
P-value	= 0.033
Method	Cochran-Mantel-Haenszel
Parameter estimate	Odds ratio (OR)
Point estimate	1.74
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.04
upper limit	2.91

Notes:

[3] - Odds ratios and p-values were from a Cochran-Mantel-Haenszel test stratified by presence of intracranial central nervous system (iCNS) metastases at Baseline, and prior chemotherapy for locally advanced or metastatic disease (current strata).

Secondary: Confirmed Intracranial ORR (iORR)

End point title	Confirmed Intracranial ORR (iORR)
End point description:	ORR was defined as percentage of participants who achieved CR or PR in the central nervous system (CNS) in randomized participants with intracranial CNS metastasis at baseline. CR is defined as disappearance of all extranodal target and non-target lesions. All pathological lymph nodes must have decreased to <10 mm in short axis for target lesions and all lymph nodes must be non-pathological in size (<10 mm short axis), normalization of tumor marker level for non-target lesions. PR is at least a 30% decrease in the SLD of target lesions, taking as reference the baseline sum diameters. ITT Population included all participants randomized to each regimen regardless of whether they tested ALK+, or whether they received study drug or adhered to the assigned dose. Overall number of participants analyzed are the participants with data available for analyses.
End point type	Secondary
End point timeframe:	
Baseline up to end of treatment (Up to 36 months)	

End point values	Randomized Phase: Brigatinib 90 mg QD/180 QD	Crossover Phase: Brigatinib 90 mg QD/180 mg QD	Randomized Phase: Crizotinib 250 mg BID	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	47	42	49	
Units: percentage of participants				
number (confidence interval 95%)	66.0 (50.69 to 79.14)	35.7 (21.55 to 51.97)	14.3 (5.94 to 27.24)	

Statistical analyses

Statistical analysis title	Statistical Analysis for iORR
Comparison groups	Randomized Phase: Brigatinib 90 mg QD/180 QD v Randomized Phase: Crizotinib 250 mg BID
Number of subjects included in analysis	96
Analysis specification	Pre-specified

End point title	Time to Response (TTR)
-----------------	------------------------

End point description:

Time to response as assessed by BIRC, assessment and is defined as the time interval from the date of randomization until the initial observation of CR or PR. CR is defined as disappearance of all extranodal target and non-target lesions. All pathological lymph nodes must have decreased to <10 mm in short axis for target lesions and all lymph nodes must be non-pathological in size (<10 mm short axis), normalization of tumor marker level for non-target lesions. PR is at least a 30% decrease in the SLD of target lesions, taking as reference the baseline sum diameters. ITT Population included all participants randomized to each regimen regardless of whether they tested ALK+, or whether they received study drug or adhered to the assigned dose. Only responders were reported for this outcome measure.

Secondary: Disease Control Rate (DCR)

End point title	Disease Control Rate (DCR)
-----------------	----------------------------

End point description:

Disease control as assessed by BIRC:percentage of randomized participants who have achieved CR,PR,or stable disease(SD)after randomization.CR:disappearance of all extranodal target and non-target lesions. All pathological lymph nodes must have decreased to <10 mm in short axis for target lesions and all lymph nodes must be non-pathological in size (<10 mm short axis), normalization of tumor marker level for non-target lesions. PR: >=30% decrease in SLD of target lesions, taking as reference baseline sum diameters. SD: neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD. PD:SLD increased by >=20% from the smallest value on study, SLD must also demonstrate an absolute increase of >=5 mm, and unequivocal progression of existing non-target lesions. ITT Population:all participants randomized to each regimen regardless of whether they tested ALK+, or whether they received study drug or adhered to assigned dose.

Notes:

[7] - Odds ratios and p-values were from a Cochran-Mantel-Haenszel test stratified by presence of iCNS metastases at Baseline, and prior chemotherapy for locally advanced or metastatic disease (current strata).

Secondary: Percentage of Participants with Treatment-emergent Adverse Events (TEAEs)

End point title	Percentage of Participants with Treatment-emergent Adverse Events (TEAEs)
-----------------	---------------------------------------------------------------------------

End point description:

An AE is any untoward medical occurrence in a participant. An AE can be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal product whether or not considered related to the medicinal product. Any worsening of a preexisting condition which is temporally associated with the use of the study drug (i.e., occurs after the first dose of study drug) is also an AE. TEAEs are defined as AEs starting/worsening on or after the first dose of study treatment and no later than the earliest of 30 days after the last dose of the treatment to which the participant was assigned, or the day before start of brigatinib therapy in crossover participant. Treated Population included all participant who received ≥at least 1 dose of study drug and served as basis of safety analysis.

End point type	Secondary

Reporting groups

Reporting group title	Randomized Phase: Brigatinib 90 mg QD/180 QD
-----------------------	----------------------------------------------

Reporting group description:

Brigatinib 90 mg, tablets, orally, QD for first 7 days followed by 180 mg, orally, QD, in each 28-day cycle until PD, intolerable toxicity, consent withdrawal, or death (The median duration of exposure was 34.86 months).

Reporting group title	Crossover Phase: Brigatinib 90 mg QD/180 mg QD
-----------------------	------------------------------------------------

Reporting group description:

Participants who experienced PD as assessed by the BIRC or received radiotherapy to the brain while on 'Crizotinib 250 mg BID' therapy in Randomized Phase were crossed over. Following 10-day washout period, crossover participants received brigatinib 90 mg, tablets, orally, QD for first 7 days followed by 180 mg, tablets, orally, QD in each 28-day cycle up to end of the study (The median duration of exposure was 17.25 months).

Reporting group title	Randomized Phase: Crizotinib 250 mg BID
-----------------------	-----------------------------------------

Reporting group description:

Crizotinib 250 mg, tablets, BID in each 28-day cycle until disease progression, intolerable toxicity, consent withdrawal, or death (The median duration of exposure was 9.26 months).

Serious adverse events	Randomized Phase: Brigatinib 90 mg QD/180 QD	Crossover Phase: Brigatinib 90 mg QD/180 mg QD	Randomized Phase: Crizotinib 250 mg BID

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 March 2018	Amendment 2.0: The primary purpose of this amendment was to make following changes: The primary reason for this amendment was to remove hormonal contraception methods from permitted treatment/therapy and from the definition of highly effective contraceptive methods. The rationale for this change was based on in vitro Cytochrome P450 (CYP3A) induction observed with brigatinib, which may decrease concentrations of CYP3A substrates, including hormonal contraceptives. Coadministration of brigatinib with hormonal contraceptives can result in decreased concentrations and loss of efficacy of hormonal contraceptives. Additional protocol deviation language was added per the sponsor's updated template.
12 May 2020	Amendment 3.0: The primary purpose of this amendment was to make following changes: The primary reasons for this amendment are to update the "final statistical analysis" and "End-of Study" due to achievement of the primary efficacy endpoint at the pre-planned interim analysis. The approximate duration of patient participation is 4 years which was added. Also that the primary analysis of the primary endpoint will be performed at the End-of-Study if the study ended before 198 events progression-free survival (PFS) events were observed. The analysis of the final assessment of overall survival (OS) was added and will also be performed at the end of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
