

Clinical trial results:

An international, multicenter, randomized, open-label, parallel efficacy, and safety trial of intravenous zoledronic acid compared to intravenous pamidronate in children with severe osteogenesis imperfect

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.novfor> complete trial results.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMEA-000024-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 May 2007
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 May 2007
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary efficacy objective was to assess the percentage (%) change in lumbar spine (LS) bone mineral density (BMD) at month 12 relative to baseline in zoledronic acid-treated pediatric patients with severe OI compared to pamidronate-treated pediatric patients who were 1 to 17 years of age.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator:

Pamidronate was established as an off-label therapy for treating children with OI as there was no approved therapy for this indication. Based on severity of disease in this pediatric population, it was ethically difficult for parents/guardians to give consent for participation in the study if their child had the possibility of being randomized to placebo.

Actual start date of recruitment	26 June 2003
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 51
Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Canada: 15
Country: Number of subjects enrolled	Finland: 14
Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	South Africa: 8
Country: Number of subjects enrolled	United Kingdom: 20
Country: Number of subjects enrolled	Hungary: 8
Country: Number of subjects enrolled	Poland: 17
Worldwide total number of subjects	150
EEA total number of subjects	76

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	2
Children (2-11 years)	104
Adolescents (12-17 years)	44
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 20 centers in 9 countries.

Pre-assignment

Screening details:

A total of 155 subjects were randomized in the study. 150 patients were in the ITT group. The trial analysis was performed on intent to treat (ITT) population defined as all randomized subjects who had a least one post-baseline efficacy assessment.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Zoledronic acid

Arm description:

Subjects were peripherally intravenously (i.v.) infused with doses of zoledronic acid based on age and body weight. Subjects aged from 1 to <3 years received 0.025 milligram (mg)/kilogram (kg) diluted in 50 milliliter (mL) of normal saline up to a maximum dose of at a frequency of 30 to 45 minute infusion every 3 months. Subjects aged from 3 to 17 years received 0.05 mg/kg diluted in 100 mL of normal saline up to a maximum of 4 mg at a frequency of 30 minute infusion every 3 months. All subjects were hospitalized for 48 hours at the first infusion of zoledronic acid and post-dose symptoms were assessed. A total of 4 infusions were received during the study treatment period.

Arm type	Experimental
Investigational medicinal product name	Zoledronic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects aged 1 to <3 years received a dose of 0.025 mg/kg up to a maximum of 2 mg every 3 months. Subjects aged 3 to 17 years received 0.05 mg/kg of zoledronic acid up to a maximum of 4 mg every 3 months. Zoledronic acid was provided in 5 mg/100 mL vials; for older children 5mg/5mL vials were used. The calculated dose of zoledronic acid was diluted to 50 mL with normal saline and infused over 30 to 45 minutes for children <3 years old; and diluted to 100 mL with normal saline for infusion over 30 minutes in subjects aged 3 to 17 years. All Subjects were hospitalised for 48 hours at the first infusion of zoledronic acid and post-dose symptoms were assessed. A total of 4 infusions were received during the study treatment period.

Arm title	Pamidronate
------------------	-------------

Arm description:

Subjects were peripherally i.v. infused with doses of pamidronate based on age and body weight. Subjects aged from 1 to <2 years received 0.5 mg/kg/day at frequency of 4 hour infusion on each of 3 successive days, every 2 months. Subjects aged 2 years received 0.75 mg/kg/day at a frequency of 4 hour infusion on each of 3 successive days, every 3 months. Subjects aged from 3 to 17 years received 1 mg/kg/day at a frequency of 4 hour infusion on each of 3 successive days, every 3 months. Subjects received a maximum daily dose of up to 60 mg.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Pamidronate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects aged 1 to <2 years received a daily dose of 0.5 mg/kg up to a maximum of 60 on each of 3 successive days, every 2 months. Subjects aged 2 and 3 to 17 years received a daily dose of 0.75 mg/kg and 1 mg/kg of pamidronate, respectively up to a maximum of 60 mg on each of 3 successive days, every 3 months. Each 90 mg vial of lyophilized pamidronate was reconstituted with 10.0 mL of sterile water for injection.

Number of subjects in period 1	Zoledronic acid	Pamidronate
Started	74	76
Completed	68	69
Not completed	6	7
Consent withdrawn by subject	3	3
Adverse event, non-fatal	2	2
Lost to follow-up	1	2

Secondary: Change from baseline in lumbar spine Z-score at Month 12

End point title	Change from baseline in lumbar spine Z-score at Month 12
End point description:	
Z-score was defined as the comparison of BMD in subjects with osteoporosis to a healthy subject of similar age and body size. It is the number of standard deviations of the BMD measurement above or below that of healthy subject. A Z-score above 2.0 was considered normal according to the International Society for Clinical Densitometry (ISCD). Positive values shows improvement. Subjects aged greater than or equal to 3 years were imaged on the Hologic equipment and subjects aged greater than or equal to 5 years were imaged on the Lunar equipment with validated normalized ranges. The analysis was performed on ITT population. The missing values were imputed using the LOCF approach.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 February 2003	The amendment was issued 4 months before the first subject first visit. The amendment complied with an Food and Drug Administration (FDA) written request requiring the inclusion of children in the 1-3 year age group. Safety related changes were also added as per the suggestion of the Data Safety Monitoring Board (DSMB) concerning definitions and tests for renal abnormalities. The amendment also added six infants, 3 to 11 months of age, to be treated with zoledronic acid at (a) pre-designated site(s). Nine infants were screened, but none met the inclusion/exclusion criteria.
02 February 2004	The amendment was issued after data were reviewed for the first 36 subjects enrolled in the study. The amendment included change in the conduct of the study based on the recommendations of the DSMB. The amendment included: <ul style="list-style-type: none">• The ionized calcium assessments and required hospitalisations for subjects were amended to reflect the standard of treatment.• A re-test for the pathologic proteinuria exclusion criterion was allowed.• Approval was granted for enrollment of subjects aged 1 to 3 years at all study sites. Subjects aged 3 to 11 months were to be enrolled at a pre-designated site.• For subjects less than 3 years old randomized to zoledronic acid treatment, 5 mg/100 mL plastic vials (rather than 5 mg/5 mL vials) were used to ensure greater accuracy for these subjects who were to receive smaller doses of zoledronic acid.
19 January 2006	The amendment included: <ul style="list-style-type: none">• The lower age entry criterion for infants was removed and upper limit increased to 12 months (from 11 months).• An exclusion criterion for urine protein/creatinine ratio of >0.4 for infants was added.• The urine sample collected for urine protein/creatinine ratio assessment was to be a first morning void.• The number of subjects randomized was increased to approximately 154 subjects to evaluate all primary endpoints.
31 January 2007	The amendment was to clarify and implement the DSMB recommendations, when they reviewed un-blinded efficacy and safety data. Subjects with type I OI, regardless of study drug assignment received no further study drug due to an observed increased incidence of femur fracture, while all other subjects (type III or IV OI) continued to receive their assigned study drug.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.novfor> complete trial results.

Notes:
