Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 February 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 August 2018
Global end of trial reached?	Yes
Global end of trial date	07 February 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study aims to evaluate a switch from fixed dose combination (FDC) treatment with ATRIPLATM for 12 weeks prior to screening to FDC treatment with Doravirine, Tenofovir, Lamivudine (MK-1439A) in virologically-suppressed, human immunodeficiency virus type 1 (HIV-1)-infected participants. The primary hypothesis is that switching from ATRIPLATM to Doravirine, Tenofovir, Lamivudine results in a lower proportion of participants with at least one CNS toxicity of at least Grade 2 intensity at Week 12 than continuation of ATRIPLATM treatment.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 March 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Ireland: 2
Country: Number of subjects enrolled	South Africa: 45
Country: Number of subjects enrolled	United Kingdom: 39
Worldwide total number of subjects	86
EEA total number of subjects	2

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	82
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Out of 112 participants screened, 86 were randomized and received study treatment.

Period 1

Period 1 title	Base Study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Immediate Switch to MK-1439A
------------------	------------------------------

Arm description:

Participants on a baseline regimen of ATRIPLA™ for at least 12 weeks prior to screening will be switched to blinded MK-1439A orally, once daily for 12 weeks, followed by open-label MK-1439A orally, once daily for an additional 12 weeks. Eligible participants from Base Study (Day 1 to Week 24) may have entered open-label optional study extensions to receive MK-1439A once daily during Study Extension 1 (Weeks 24 to 120), Extension 2 (Weeks 120 to 216), and Extension 3 (Weeks 216 to 312).

Arm type	Experimental
Investigational medicinal product name	Doravirine, Tenofovir, Lamivudine
Investigational medicinal product code	
Other name	MK-1439A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A single tablet FDC containing doravirine 100 mg, lamivudine (3TC) 300 mg and tenofovir disoproxil fumarate (TDF) 300 mg administered orally, once daily for 12 weeks during the Blinded period and 12 weeks during the Open-Label period.

Investigational medicinal product name	Placebo to ATRIPLA™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A single placebo to ATRIPLA™ tablet administered orally, once daily for 12 weeks during the Blinded period.

Investigational medicinal product name	Placebo to Doravirine, Tenofovir, Lamivudine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A single placebo to doravirine, tenofovir, lamivudine tablet administered orally, once daily for 12 weeks during the Blinded period.

Arm title	Deferred Switch to MK-1439A
------------------	-----------------------------

Arm description:

Participants continued their ongoing ATRIPLA™ regimen orally, once daily for 12 weeks (Day 1 to Week

12), followed by open-label MK-1439A orally, once daily for 24 weeks (Weeks 12 to 36). Eligible participants from Base Study (Day 1 to Week 36) may have entered open-label optional study extensions to receive MK-1439A once daily during Study Extension 1 (Weeks 36 to 132), Extension 2 (Weeks 132 to 228), and Extension 3 (Weeks 228 to 324).

Arm type	Active comparator
Investigational medicinal product name	ATRIPLA™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A single tablet FDC containing efavirenz (EFV) 600 mg, emtricitabine (FTC) 200 mg, and TDF 300 mg administered orally, once daily for 12 weeks during the Blinded period.

Investigational medicinal product name	Doravirine, Tenofovir, Lamivudine
Investigational medicinal product code	
Other name	MK-1439A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A single-tablet FDC containing doravirine 100 mg, 3TC 300 mg and TDF 300 mg administered orally, once daily for 24 weeks during the Open-Label period.

Number of subjects in period 1	Immediate Switch to MK-1439A	Deferred Switch to MK-1439A
Started	43	43
Switched Over to MK-1439A	0 ^[1]	42
Completed	43	41
Not completed	0	2
Consent withdrawn by subject	-	1
Pregnancy	-	1

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Only participants in the Deferred Switch to MK-1439A arm switched treatments.

Period 2

Period 2 title	Study Extension 1 (Open-Label)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Immediate Switch to MK-1439A

Arm description:

Participants on a baseline regimen of ATRIPLA™ for at least 12 weeks prior to screening will be switched to blinded MK-1439A orally, once daily for 12 weeks, followed by open-label MK-1439A orally, once daily for an additional 12 weeks. Eligible participants from Base Study (Day 1 to Week 24) may have entered open-label optional study extensions to receive MK-1439A once daily during Study Extension 1 (Weeks 24 to 120), Extension 2 (Weeks 120 to 216), and Extension 3 (Weeks 216 to 312).

Arm type	Experimental
Investigational medicinal product name	Doravirine, Tenofovir, Lamivudine
Investigational medicinal product code	
Other name	MK-1439A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A single-tablet FDC containing doravirine 100 mg, 3TC 300 mg and TDF 300 mg administered orally, once daily for an additional 96 weeks during the Open-Label extension period 1.

Arm title	Deferred Switch to MK-1439A
------------------	-----------------------------

Arm description:

Participants continued their ongoing ATRIPLA™ regimen orally, once daily for 12 weeks (Day 1 to Week 12), followed by open-label MK-1439A orally, once daily for 24 weeks (Weeks 12 to 36). Eligible participants from Base Study (Day 1 to Week 36) may have entered open-label optional study extensions to receive MK-1439A once daily during Study Extension 1 (Weeks 36 to 132), Extension 2 (Weeks 132 to 228), and Extension 3 (Weeks 228 to 324).

CNS Toxicity Percentage Of Maximum Score			
Participants were asked to rate the intensity for each of the 10 events as none (Grade 0), mild (Grade 1), moderate (Grade 2), or severe (Grade 3). Mild = symptom is noticeable but does not interfere with normal activities; moderate = symptom has some impact on normal activities; severe = symptom prevents conduct of normal activities. The CNS toxicity score was calculated by summing across all 10 CNS toxicities and converting the sum to a percentage of the maximum possible sum of intensities (10 x 3 = 30). A higher CNS score indicates worsening symptoms.			
Units: Percentage of maximum score			
arithmetic mean	32.9	37.1	
standard deviation	± 16.5	± 19.0	-
Fasting Lipids - LDL Cholesterol			
Mean concentrations of low-density lipoprotein (LDL) cholesterol. All randomized participants who received at least one dose of study treatment were analyzed.

Subject analysis set type	Per protocol
Subject analysis set description:	
Immediate Switch to MK-1439A: Participants on a baseline regimen of ATRIPLA™ for at least 12 weeks prior to screening will be switched to blinded MK-1439A orally, once daily for 12 weeks, followed by open-label MK-1439A orally, once daily for an additional 12 weeks.	
Deferred Switch to MK-1439A: Participants will continue on their ongoing ATRIPLA™ regimen orally, once daily for 12 weeks, followed by open-label MK-1439A orally, once daily for 24 weeks.	

Primary: Percentage of participants with at least one central nervous system (CNS) toxicity of at least grade 2 intensity at week 12

End point title	Percentage of participants with at least one central nervous system (CNS) toxicity of at least grade 2 intensity at week 12
End point description:	
A questionnaire was used to solicit for CNS toxicity based on the following 10 events: dizziness; depression/low mood; insomnia/sleeplessness; anxiety/nervousness; confusion; impaired concentration/attention; headache; somnolence/daytime sleepiness; aggressive mood/behavior; and abnormal dreams. Participants were asked to rate the intensity for each of the 10 events as none (Grade 0), mild (Grade 1), moderate (Grade 2), or severe (Grade 3). Mild = symptom is noticeable but does not interfere with normal activities; moderate = symptom has some impact on normal activities; severe = symptom prevents conduct of normal activities. Percentage of participants with at least one CNS toxicity of Grade 2 or higher were recorded, based on the last observation carried forward (LOCF) approach. All randomized participants who received at least one dose of study treatment, and have baseline data for analyses requiring baseline data were analyzed.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with one or more drug-related SAEs for the combined treatment groups 24 weeks after the switch

End point title	Number of participants with one or more drug-related SAEs for the combined treatment groups 24 weeks after the switch
End point description: A serious adverse event (SAE) is any AE occurring at any dose or during any use of Sponsor's product that results in any of the following: death; is life threatening; results in persistent or significant disability/incapacity; results in or prolongs an existing hospitalization; is a congenital anomaly/birth defect; is another important medical event; is a cancer; is associated with an overdose. A drug-related	

SAE was determined by the investigator to be related to the drug. For the ISG 24 week post-switch was week 24; for the DSG week 24 post-switch was week 36. All randomized participants who received at least one dose of study treatment, and have baseline data for analyses requiring baseline data. Based on the protocol-specified plan, the combined treatment groups was analyzed. One participant in the DSG who discontinued from the study, before switching to MK-1439A, was not included in the analysis.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants who discontinued treatment due to an AE for the combined treatment groups 24 weeks after the switch

End point title	Number of participants who discontinued treatment due to an AE for the combined treatment groups 24 weeks after the switch
-----------------	--

End point description:

An AE was any untoward medical occurrence in a participant administered a pharmaceutical product and which does not necessarily have to have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. Any worsening of a preexisting condition that is temporally associated with the use of the Sponsor's product, is also an AE. For the ISG 24 week post-switch was week 24; for the DSG week 24 post-switch was week 36. All randomized participants who received ≥ 1 dose of study treatment, and have baseline data for analyses requiring baseline data. Based on the protocol-specified plan, the combined treatment groups was analyzed. One participant in the DSG who discontinued from the study, before switching to MK-1439A, was not included in the analysis.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 326 weeks

Adverse event reporting additional description:

All cause-mortality was reported on all allocated participants. AEs were reported for all allocated participants who received ≥ 1 dose of study treatment. Per protocol, serious adverse events and all-cause mortality were collected up to 326 weeks, and non-serious adverse event data were collected up to 134 weeks.

Assessment type	Systematic

Reporting groups

Reporting group title	Immediate Switch Group Day 1 to Week 24
-----------------------	---

Reporting group description:

Participants on a baseline regimen of ATRIPLA™ for at least 12 weeks prior to screening switched to blinded doravirine, tenofovir, lamivudine orally, once daily for 12 weeks, followed by open-label doravirine, tenofovir, lamivudine orally, once daily for an additional 12 weeks

Reporting group title	Deferred Switch Group Double-blind Day 1 to Week 12
-----------------------	---

Reporting group description:

Participants continued their ongoing ATRIPLA™ regimen orally, once daily for 12 weeks.

Reporting group title	Deferred Switch Group Open-label Week 12-36
-----------------------	---

Reporting group description:

Participants who continued their ongoing ATRIPLA™ regimen orally, once daily for 12 weeks switched to open-label doravirine, tenofovir, lamivudine orally, once daily for a total of 24 weeks (Week 12 - Week 36).

Reporting group title	Immediate Switch Group only (Week 24-120) EXT 1
-----------------------	---

Reporting group description:

One doravirine, tenofovir, lamivudine taken q.d. by mouth for an additional 96 weeks (Week 24 - Week 120)

Reporting group title	Deferred Switch Group (Week 36-132) EXT 1
-----------------------	---

Reporting group description:

One doravirine, tenofovir, lamivudine taken q.d. by mouth for an additional 96 weeks (Week 36 - Week 132)

Reporting group title	Deferred Switch Group (Week 132-228) EXT 2
-----------------------	--

Reporting group description:

One doravirine, tenofovir, lamivudine taken q.d. by mouth for an additional 96 weeks (Week 132 - Week 228)

Reporting group title	Immediate Switch Group (Week 120-216) EXT 2
-----------------------	---

Reporting group description:

One doravirine, tenofovir, lamivudine taken q.d. by mouth for an additional 96 weeks (Week 120 - Week 216)

Reporting group title	Immediate Switch Group (Week 216-312) EXT 3
-----------------------	---

Reporting group description:

One doravirine, tenofovir, lamivudine taken q.d. by mouth for an additional 96 weeks (Week 216 - Week 312)

Reporting group title	Deferred Switch Group (Week 228-324) EXT 3
-----------------------	--

Reporting group description:

One doravirine, tenofovir, lamivudine taken q.d. by mouth for an additional 96 weeks (Week 228 - Week 324)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 October 2016	The primary purpose of Amendment 1 was to add study extension 1 to collect long-term efficacy and safety data and to incorporate changes to facilitate enrollment and ensure trial completion.
13 July 2018	The primary purpose of Amendment 2 was to add study extension 2 to provide continued access to MK-1439A for participants who are deriving benefit from MK-1439A until the drug is available locally in the country participating in the trial or for an additional 2 years.
18 March 2021	The primary purpose of Amendment 3 was to provide continued access to MK-1439A until the drug is available locally in countries participating in the trial or for an additional 2 years (whichever comes first).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
