Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 October 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 May 2017
Global end of trial reached?	Yes
Global end of trial date	24 August 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to provide proof-of-concept and dose-ranging for the efficacy of risankizumab as a treatment for psoriatic arthritis.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all patients as required.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 April 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Canada: 11
Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Czech Republic: 21
Country: Number of subjects enrolled	Finland: 22
Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Germany: 25
Country: Number of subjects enrolled	Japan: 17
Country: Number of subjects enrolled	Poland: 44
Country: Number of subjects enrolled	Spain: 13
Country: Number of subjects enrolled	Taiwan: 8
Country: Number of subjects enrolled	United States: 66
Worldwide total number of subjects	239
EEA total number of subjects	137

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	205
From 65 to 84 years	34
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This Phase 2, multi-national, randomized, parallel-design, multiple-dose, placebo controlled, double-blind study compared risankizumab with placebo in patients with active psoriatic arthritis. Patients were randomized at a 2:2:2:1:2 ratio, stratified based on prior tumor necrosis factor inhibitor (TNFi) use and concurrent methotrexate (MTX) use

Pre-assignment

Screening details:

This study included a 6-week screening period. All subjects were screened for eligibility to participate in the trial. Subjects attended a specialist sites which ensured that they met all strictly implemented inclusion/exclusion criteria. Subjects were not to be entered to trial treatment if any one of the specific entry criteria was violated.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Blinding implementation details:

A Randomized, Double-Blind, Placebo-Controlled, Proof-of-Concept Dose-Ranging Study

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants randomized to receive double-blind (DB) placebo for risankizumab by subcutaneous (SC) injection every 4 weeks for 16 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo for Risankizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo for risankizumab by subcutaneous (SC) injection every 4 weeks for 16 weeks.

Arm title	Risankizumab 150 mg Every 4 Weeks
------------------	-----------------------------------

Arm description:

Participants randomized to receive double-blind (DB) risankizumab 150 milligram (mg) by subcutaneous (SC) injection every 4 weeks for 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Risankizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received risankizumab 150 mg by subcutaneous (SC) injection every 4 weeks for 16 weeks.

Arm title	Risankizumab 150 mg Weeks 0, 4, and 16
------------------	--

Arm description:

Participants randomized to receive double-blind (DB) risankizumab 150 mg by subcutaneous (SC) injection at Weeks 0, 4, and 16.

Arm type	Experimental
Investigational medicinal product name	Risankizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received risankizumab 150 mg by subcutaneous (SC) injection at Weeks 0, 4, and 16.

Arm title	Risankizumab 150 mg Weeks 0 and 12
------------------	------------------------------------

Arm description:

Participants randomized to receive double-blind (DB) risankizumab 150 mg by subcutaneous (SC) injection at Weeks 0 and 12.

Arm type	Experimental
Investigational medicinal product name	Risankizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received risankizumab 150 mg by subcutaneous (SC) injection at Weeks 0 and 12.

Arm title	Risankizumab 75 mg Week 0
------------------	---------------------------

Arm description:

Participants randomized to receive double-blind (DB) risankizumab 75 mg by subcutaneous (SC) injection at Week 0.

Arm type	Experimental
Investigational medicinal product name	Risankizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received risankizumab 75 mg by subcutaneous (SC) injection at Weeks 0.

Number of subjects in period 1 ^[1]	Placebo	Risankizumab 150 mg Every 4 Weeks	Risankizumab 150 mg Weeks 0, 4, and 16

Subject Withdrawal	1	-
Not Specified	1	-
Lost to follow-up	-	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on the patients who were randomized after successfully completing the screening period and received at least one of the trial medication.

Secondary: Health Assessment Questionnaire Disability Index (HAQ-DI) Score: Change from Baseline to Week 16

End point title	Health Assessment Questionnaire Disability Index (HAQ-DI) Score: Change from Baseline to Week 16
-----------------	---

End point description:

The HAQ-DI is a patient-reported questionnaire specific for rheumatoid arthritis that consists of 20 questions referring to 8 domains: dressing/grooming, arising, eating, walking, hygiene, reach, grip, and daily activities. Participants assessed their ability to do each task over the past week using the following response categories: without any difficulty (0); with some difficulty (1); with much difficulty (2); and unable to do (3). Scores on each task were summed and averaged to provide an overall score ranging from 0 to 3, where 0 represents no disability and 3 very severe, high-dependency disability. HAQ remission indicating normal physical function is defined by HAQ-DI score of < 0.5. Negative change from Baseline indicates improvement. Participants in the FAS with available data at Baseline and Week 16.

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description:	
The 2-sided p-value is calculated using a mixed model repeated measures model with categorical fixed effects of treatment, stratification factors, week, and treatment-by-week interaction and the continuous fixed baseline measurement, with subject as a random effect.	
Comparison groups	Placebo v Risankizumab 150 mg Every 4 Weeks; 150 mg Weeks 0, 4, and 16

Number of subjects included in analysis	70
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.453
Method	mixed model repeated measures model
Parameter estimate	Mean difference (final values)
Point estimate	-1.2
Confidence interval	
level	90 %
sides	2-sided
lower limit	-4
upper limit	1.5

Statistical analysis title	Statistical Analysis 2

Secondary: Percentage of Participants Achieving 90% Improvement in Psoriasis Area and Severity Index (PASI) Score (PASI90) at Week 16

End point title	Percentage of Participants Achieving 90% Improvement in Psoriasis Area and Severity Index (PASI) Score (PASI90) at Week 16
-----------------	--

End point description:

PASI is a composite score based on the degree of effect on body surface area of psoriasis and the extension of erythema (reddening), induration (thickness), desquamation (scaling) of the lesions and area affected as observed on the day of examination. The severity of each sign was assessed using a 5-point scale, where 0=no symptoms, 1=slight, 2=moderate, 3=marked, 4=very marked. The PASI score ranges from 0 to 72, where 0 indicates no psoriasis and 72 indicates very severe psoriasis. PASI90 is defined as at least a 90% reduction in PASI score compared with the Baseline PASI score. The percent reduction in score is calculated as (PASI score at Baseline - score at follow-up visit) / PASI score at Baseline * 100. The percentage of participants achieving PASI 90 at Week 16 are provided. NRI was used for missing data. Full Analysis Set (FAS): All randomized participants who received at least one dose of study drug.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 October 2016	Major changes from the original protocol to amendment 1 included the notification to sites of a change in sponsor of the study in the United States (from BI to AbbVie), and informed sites of an open label extension study for subjects completing required participation in this study. The open label extension study is sponsored by AbbVie as part of the collaboration between BI and AbbVie in the development of risankizumab. Amendment 1 also revised the study visit schedule and other protocol sections to clarify eligibility and study requirements for those subjects enrolling into the open label extension study. Amendment 1 was not considered to have an impact on the integrity or interpretation of the data.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
