

Clinical trial results:

An open-label, prospective, multicenter study investigating clinical efficacy, safety, and pharmacokinetic properties of the human normal immunoglobulin for intravenous administration BT595 as replacement therapy in patients with primary immunodeficiency disease (PID)

Summary

EudraCT number	2015-003652-52
Trial protocol	DE ES GB
Global end of trial date	01 April 2020

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002092-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 September 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 April 2020
Global end of trial reached?	Yes
Global end of trial date	01 April 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to demonstrate that the rate of acute serious bacterial infections (i.e., the mean number of acute serious bacterial infections per subject year) is less than 1.0 to provide substantial evidence of efficacy.

Protection of trial subjects:

To monitor the safety data from adult subjects and provide advice and recommendations on the enrollment of pediatric subjects, a DSMB consisting of independent experts has been implemented.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 October 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	Hungary: 28
Country: Number of subjects enrolled	United States: 21
Country: Number of subjects enrolled	Russian Federation: 11
Worldwide total number of subjects	67
EEA total number of subjects	35

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	12
Adolescents (12-17 years)	6
Adults (18-64 years)	44

From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Date of first enrolment: 04-Oct-2016; First IMP administration: 03-Nov-2016; Date of last completed: 01-Apr-2020

Pre-assignment

Screening details:

Male or female, aged 2 through 75 years.

Diagnosis of PID with impaired antibody production.

Established replacement therapy with any intravenous immunoglobulin (IVIg) reference preparation during the previous 6 months.

Established replacement therapy with a single IVIg reference preparation for at least 3 months prior to treatment start.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Full analysis set (FAS)
-----------	-------------------------

Arm description:

3- or 4-week schedule for a treatment period of approximately 12 months according to the subject's prestudy IVIg treatment.

Arm type	Experimental
Investigational medicinal product name	IgG Next Generation
Investigational medicinal product code	BT595
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

BT595 will be administered at 3- or 4-week intervals for a treatment period of approximately 12 months. The initial dose and dosage intervals must be consistent with the subject's prestudy IVIg treatment and the initial dose and dosage interval will only be changed if medically indicated.

The planned dose of BT595 is 0.2 to 0.8 g/kg body weight (bw) (2 to 8 mL/kg bw) administered as intravenous infusions at 3- or 4-week intervals for a treatment period of approximately 12 months.

Number of subjects in period 1	Full analysis set (FAS)
Started	67
Completed	60
Not completed	7
Consent withdrawn by subject	4
Adverse event, non-fatal	3

Subject analysis set title	Full analysis set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description: All subjects following the principle of intention to treat. The FAS comprised all subjects who received ≥ 1 dose of study medication. Subjects were analyzed according to the treatment planned. The FAS was used for all analyses of efficacy endpoints. For this nonrandomized study, FAS and SAF were identical and included all subjects who received ≥ 1 dose of BT595.	

Primary: Number of acute serious bacterial infections (SBI)

End point title	Number of acute serious bacterial infections (SBI)
End point description: The primary endpoint of this study was the SBI rate, defined as the mean number of acute serious bacterial infections (SBIs) per subject-year, according to EMA and FDA guidance for IVIg studies. Acute serious bacterial infections included the following (based on specific diagnostic criteria as per FDA guidance (FDA, 2008): <ul style="list-style-type: none">• Bacteremia or sepsis.• Bacterial meningitis.• Osteomyelitis/septic arthritis.• Bacterial pneumonia.• Visceral abscess.	
End point type	Primary
End point timeframe: Start of treatment until close out.

Statistical analyses

Statistical analysis title	Rate of SBI
Statistical analysis description: According to EMA and FDA guidelines for IVIG studies: The null hypothesis (SBI rate ≥ 1.0 per subject-year at the 1% level of significance using a computed one-sample Poisson model) was tested. Therefore, the full analysis set was compared only to a fixed rate.	
Comparison groups	Full analysis set (FAS) v Full analysis set (FAS)

Number of subjects included in analysis	134
Analysis specification	Pre-specified
Analysis type	other ^[1]
P-value	< 0.01 ^[2]
Method	one-sample Poisson CI
Parameter estimate	annual rate (SBI)
Point estimate	0.015
Confidence interval	
level	Other: 99 %
sides	1-sided
upper limit	0.151

Notes:

[1] - According to EMA and FDA guidelines for IVIG studies: The null hypothesis (SBI rate ≥ 1.0 per subject-year at the 1% level of significance using a computed one-sample Poisson model) was tested

[2] - Rate of SBI was tested according to Guidelines against 1.0. Only upper Confidence Limit was calculated.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Only Treatment-emergent AEs (TEAEs) are displayed. TEAEs were recorded from start of Treatment until Follow-up visit.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 October 2016	The requirement for additional blood sampling for Coombs test and serum haptoglobin for the first 10 (adult) subjects who received ≥ 2 BT595 infusions was added (due to DSMB request)
02 June 2017	<p>The option of homecare service for the PK sampling in pediatric subjects was added.</p> <p>An additional specification regarding vital sign assessment was added: In any case where a change in infusion rate occurred sooner than within a 15 minute interval, vital signs had to be measured prior to the change (to avoid further protocol deviations).</p> <p>A clarification that every infusion had to start at an initial rate of 0.3 mL/kg/h was added (to avoid further protocol deviations).</p>
21 March 2018	<p>The IND Number was corrected from 128413 to 17046. Note: Former IND number was mistakenly assigned by the Center for Drug Evaluation and Research (CDER) and not by the Center for Biologics Evaluation and Research (CBER).</p> <p>The number of planned subjects was increased from approximately 60 to approximately 70 subjects, to ensure a sufficient number of pediatric subjects was enrolled and to meet the FDA and EMA requirements for the clinical studies of immunoglobulins for intravenous administration.</p> <p>The date for the expected last subject last visit was moved from FEB 2018 to NOV 2019 due to shifted timelines.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
