Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 September 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 October 2017
Global end of trial reached?	Yes
Global end of trial date	03 September 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Phase 1b Dose Escalation: To characterize safety & tolerability of alobresib alone and in combination with enzalutamide in participants with metastatic castrate-resistant prostate cancer (mCRPC); determine the maximum tolerated dose (MTD) of alobresib alone and in combination with enzalutamide.

Phase 2 Dose Expansion: Group 1: Evaluate the efficacy of alobresib alone in participants with mCRPC who have progressed while receiving enzalutamide (may have also received abiraterone); Group 2: Evaluate the efficacy of alobresib combined with enzalutamide in participants with mCRPC who have progressed while receiving treatment with abiraterone; Group 3: Evaluate the efficacy of alobresib combined with enzalutamide in participants with mCRPC who had prostate-specific antigen, but not radiographic progression, while receiving treatment with enzalutamide.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance

with regulatory requirements. This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 December 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 31
Worldwide total number of subjects	31
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	20
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at 4 study sites in the United States. The first participant was screened on 08 December 2015. The last study visit occurred on 03 September 2019. Phase 2 Dose Expansion of the study was not conducted. Results are reported for only Dose Escalation Monotherapy and Combination Therapy.

Pre-assignment

Screening details:

43 participants were screened.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Monotherapy: Alobresib 2 mg

Arm description:

Participants who had progressed on either abiraterone and/or enzalutamide, received alobresib 2 mg tablets administered orally once daily to determine the maximum tolerated dose (MTD).

Arm type	Experimental
Investigational medicinal product name	Alobresib
Investigational medicinal product code	
Other name	GS-5829
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

2 mg administered once daily.

Arm title	Monotherapy: Alobresib 3 mg
------------------	-----------------------------

Arm description:

Participants who had progressed on either abiraterone and/or enzalutamide, received alobresib 3 mg tablets administered orally once daily to determine the MTD.

Arm type	Experimental
Investigational medicinal product name	Alobresib
Investigational medicinal product code	
Other name	GS-5829
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

3 mg administered once daily.

Arm title	Monotherapy: Alobresib 4 mg
------------------	-----------------------------

Arm description:

Participants who had progressed on either abiraterone and/or enzalutamide, received alobresib 4 mg tablets administered orally once daily to determine the MTD.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Alobresib
Investigational medicinal product code	
Other name	GS-5829
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 4 mg administered once daily.	
Arm title	Monotherapy: Alobresib 6 mg
Arm description: Participants who had progressed on either abiraterone and/or enzalutamide, received alobresib 6 mg tablets administered orally once daily to determine the MTD.	
Arm type	Experimental
Investigational medicinal product name	Alobresib
Investigational medicinal product code	
Other name	GS-5829
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 6 mg administered once daily.	
Arm title	Monotherapy: Alobresib 9 mg
Arm description: Participants who had progressed on either abiraterone and/or enzalutamide, received alobresib 9 mg tablets administered orally once daily to determine the MTD.	
Arm type	Experimental
Investigational medicinal product name	Alobresib
Investigational medicinal product code	
Other name	GS-5829
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 9 mg administered once daily.	
Arm title	Combination Therapy: Alobresib 3 mg + Enzalutamide
Arm description: Participants who had progressed on abiraterone, received alobresib 3 mg tablets administered orally once daily in combination with enzalutamide 160 mg capsules administered orally once daily.	
Arm type	Experimental
Investigational medicinal product name	Alobresib
Investigational medicinal product code	
Other name	GS-5829
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 3 mg administered once daily.	
Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	XTANDI®
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: 160 mg administered once daily.	
Arm title	Combination Therapy: Alobresib 6 mg + Enzalutamide

Arm description:

Participants who had progressed on abiraterone, received alobresib 6 mg tablets administered orally once daily in combination with enzalutamide 160 mg capsules administered orally once daily.

Arm type	Experimental
Investigational medicinal product name	Alobresib
Investigational medicinal product code	
Other name	GS-5829
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

6 mg administered once daily.

Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	XTANDI®
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

160 mg administered once daily.

Primary: Phase 1b Dose Escalation: Number of Participants Experienced Dose Limiting Toxicities (DLTs)

End point title	Phase 1b Dose Escalation: Number of Participants Experienced Dose Limiting Toxicities (DLTs) ^[1]
End point description: A DLT was a toxicity, considered possibly related to alobresib, and which occurred during the DLT assessment window (Days 1 through 28) in each cohort: Grade ≥ 4 neutropenia (absolute neutrophil count (ANC) $< 500/\text{mm}^3$), Grade ≥ 3 neutropenia (ANC $< 1000/\text{mm}^3$) with fever (a single temperature $> 38.3^\circ\text{C}$ or a sustained temperature of $\geq 38^\circ\text{C}$ for more than 1 hour (h)), Grade ≥ 3 thrombocytopenia, Grade ≥ 2 bleeding (eg, gastrointestinal, respiratory, epistaxis, purpura), Grade ≥ 3 non hematologic toxicity, except- Grade 3 nausea or emesis with maximum duration of 48 h on adequate medical therapy and Grade 3 diarrhea which persists for < 72 h in the absence of maximal medical therapy, Grade ≥ 2 non hematologic treatment emergent adverse event (TEAE) that in the opinion of the investigator was of potential clinical significance such that further dose escalation would expose participants to unacceptable risk, treatment interruption ≥ 7 days due to unresolved toxicity. The DLT Analysis Set.	
End point type	Primary
End point timeframe: Day 1 through Day 28	

Notes:

Other pre-specified: Phase 1b Dose Escalation: Non-progression Rate at Week 24 According to Prostate Cancer Working Group (PCWG2) Criteria

End point title	Phase 1b Dose Escalation: Non-progression Rate at Week 24 According to Prostate Cancer Working Group (PCWG2) Criteria
-----------------	---

End point description:

The non-progression rate at Week 24, was defined as the percentage of participants who did not have disease progression by Week 24 and was estimated by Kaplan-Meier method. Responses were determined by the investigators based on PCWG2 Criteria. PCWG2 criteria for progression was determined as 'Decline from baseline' when record start of therapy to first prostate-specific antigen (PSA) increase that is $\geq 25\%$ and ≥ 2 ng/mL above the nadir and confirmed by a second value 3 or more weeks later; 'No decline from baseline' when PSA progression $\geq 25\%$ and ≥ 2 ng/mL after 12 weeks. The Full Analysis Set (FAS) included participants who received ≥ 1 dose of study drug (Alobresib or Enzalutamide), with treatment group designated according to the planned treatment. Here, 999 = Upper and lower limit of 95% Confidence Interval was not estimable.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events: From first dose through last dose of the study drug (maximum: 131 weeks) plus 30 days; All-Cause Mortality: First dose date up to approximately 4 years

Adverse event reporting additional description:

The Safety Analysis Set included all participants who received ≥ 1 dose of study treatment with treatment group designated according to actual treatment.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 September 2015	Amendment 1 included the following major changes: • Updated study design including objective and endpoints, number of participants, the introduction of a Study Day 1 visit to allow for an enzalutamide lead in for participants in the Phase 1b combination therapy and Phase 2 groups. • Modified the starting dose to a dose that was deemed safe and tolerable in Study GS-US-350-1599. • Added a risk:benefit assessment section • Updated planned number of study centers and regions. • Introduced new formulations of alobresib available for use. • Clarified the SRT members that would assess dose level reviews. • Included a study schema for additional clarification of study design. • Updated reasons for discontinuing treatment or discontinuation from the study. • Added minor clarifications to the study procedures table.
30 June 2016	Amendment 2 included the following major changes: • Updated the background, risk/benefit, study design, objectives, endpoints and number of participants to allow a third group of participants in the Phase 2 portion of this study (participants who were currently on enzalutamide and showing the early signs of progressive disease). • Updated the change in Gilead medical oversight of the study. • Modified the study design to allow enrollment in the Phase 1b combination therapy dose escalation cohorts prior to determination of the MTD in the monotherapy cohorts. • Updated inclusion/exclusion criteria for participants participating in Group 3. • Updated PK/PD collections for Group 3 participants. • Updated the statistical analysis sections and the study schema based on the new study design. • Updated current clinical experience with alobresib. • Removed the 0.2 mg formulation of alobresib and updated the minimum dose reduction level allowed. • Clarified food effect sub study procedures. • Included additional laboratory analytes for safety monitoring.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
