Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 August 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 September 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of fasinumab compared to placebo in reducing low back pain (LBP) as measured by the change from baseline to Week 16 in the average daily low back pain intensity (LBPI) numeric rating scale (NRS) score.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with the International Conference on Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 92
Country: Number of subjects enrolled	Czech Republic: 63
Country: Number of subjects enrolled	Denmark: 76
Country: Number of subjects enrolled	Estonia: 12
Country: Number of subjects enrolled	Hungary: 31
Country: Number of subjects enrolled	United States: 286
Country: Number of subjects enrolled	Canada: 3
Worldwide total number of subjects	563
EEA total number of subjects	274

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	414
From 65 to 84 years	147
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 105 sites in the US, CA & EU between 26 Jan 2016 & 13 Sep 2017. Of 1,783 subjects, 563 were randomized in 1:1:1:1 ratio to 1 of 4 treatment groups stratified by baseline LBPI, NRS score (<7 , ≥ 7), duration of chronic LBP (<5 yrs, ≥ 5 yrs) & maximum Kellgren-Lawrence (K-L) score (≤ 2 , >2) at any knee or hip joint at screening.

Pre-assignment

Screening details:

The study consisted of a screening period of up to 30 days & a 7-day pre-randomization period during which pain medication, except study-provided rescue medication, was discontinued. Confirmation of no exclusionary findings on joint on which imaging was performed during screening must have been received before a subject could be randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo SC Q4W and Placebo IV Q8W

Arm description:

Subjects randomized to the matching placebo subcutaneously (SC) every four weeks (Q4W) arm received SC placebo in a manner similar to the SC loading dose of the active groups (placebo loading dose) on Day 1 and then an SC injection of placebo at weeks 4, 8, and 12 for a total of 4 doses. Matching placebo intravenously (IV) every 8 weeks (Q8W) was received on Day 1 and at Week 8.

Arm type	Placebo
Investigational medicinal product name	Placebo IV (Matching to Fasinumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received IV infusion of placebo (matching to fasinumab) on Day 1 and at Week 8.

Investigational medicinal product name	Placebo SC (Matching to Fasinumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subject received SC injection of placebo (matching to fasinumab) on Day 1, and at Week 4, 8, 12.

Arm title	Fasinumab 6 mg SC Q4W and Placebo IV Q8W
------------------	--

Arm description:

Subjects randomized to the fasinumab 6 mg SC Q4W arm received fasinumab 12 mg SC on Day 1 (loading dose) and then 6 mg SC (planned maintenance dose) at Weeks 4, 8, and 12 for a total of 4 doses. Matching placebo was received via intravenous (IV) infusion Q8W on Day 1 and at Week 8.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Fasinumab
Investigational medicinal product code	REGN475
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subject received SC injection of fasinumab on Day 1, and at Week 4, 8, 12.

Investigational medicinal product name	Placebo (Matching to Fasinumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received IV infusion of placebo (matching to fasinumab) on Day 1 and at Week 8.

Arm title	Fasinumab 9 mg SC Q4W and Placebo IV Q8W
------------------	--

Arm description:

Subjects randomized to the fasinumab 9 mg SC Q4W arm received 18 mg SC on day 1 (loading dose) and then 9 mg SC (planned maintenance dose) at weeks 4, 8, and 12 for a total of 4 doses. Matching placebo IV Q8W was received on Day 1 and at Week 8.

Arm type	Experimental
Investigational medicinal product name	Fasinumab
Investigational medicinal product code	REGN475
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subject received SC injection of fasinumab on Day 1, and at Week 4, 8, 12.

Investigational medicinal product name	Placebo (Matching to Fasinumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received IV infusion of placebo (matching to fasinumab) on Day 1 and at Week 8.

Arm title	Fasinumab 9 mg IV Q8W and Placebo SC Q4W
------------------	--

Arm description:

Subjects randomized to the fasinumab 9 mg IV Q8W arm received IV infusions of fasinumab 9 mg on Day 1 and Week 8, for a total of 2 doses. Matching placebo SC Q4W was received on day 1 and at weeks 4, 8, and 12.

Arm type	Experimental
Investigational medicinal product name	Fasinumab
Investigational medicinal product code	REGN475
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subject received IV infusion of fasinumab on Day 1, and at Week 8.

Investigational medicinal product name	Placebo (Matching to Fasinumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection

Routes of administration	Subcutaneous use
--------------------------	------------------

Dosage and administration details:

Subject received SC injection of placebo (matching to fasinumab) on Day 1, and at Week 4, 8, 12.

Primary: Change From Baseline in the Average Daily Low Back Pain Intensity (LBPI) Score on an 11-point Numerical Rating Scale (NRS) at Week 16

End point title	Change From Baseline in the Average Daily Low Back Pain Intensity (LBPI) Score on an 11-point Numerical Rating Scale (NRS) at Week 16
End point description: Average daily low back pain was assessed on an 11-point numeric rating scale (NRS) and was defined as the average of the non-missing daily LBPI NRS scores for the 7 days before and including nominal visit. Subjects described their average low back pain during the past 24 hours on a scale ranging from 0 (no pain) to 10 (worst possible pain), where higher scores indicate higher pain. Analysis was performed on modified intent to treat set (mITT) that included all randomized subject per Interactive voice response system (IVRS) who received at least one dose of study drug based on the treatment allocated (as randomized) including data up to 5 weeks after the last dose of study drug. Here, number of subjects analyzed=subjects with available data for specified timepoint.

Secondary: Change From Baseline in the Roland Morris Disability Questionnaire (RMDQ) Total Score at Week 16

End point title	Change From Baseline in the Roland Morris Disability Questionnaire (RMDQ) Total Score at Week 16
-----------------	--

End point description:

The RMDQ is a self-administered, widely used health status measure for LBP. It measures pain and function, using 24 items describing limitations to everyday life that can be caused by LBP. The score of the RMDQ is the total number of items checked – that is from a minimum of 0 (no disability) to a maximum of 24 (maximum disability), where lower scores indicative of better function. Analysis was performed on mITT population. Here, number of subjects analyzed=subjects with available data for specified timepoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of the informed consent form up to the final visit (Week 36) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported AEs and deaths are treatment emergent that is AEs that developed/worsened and deaths that occurred during 'the treatment emergent period' (from the first dose of study drug up to the 4 weeks after the last dose of SC drug, or 8 weeks after the last dose of IV study drug, whichever is later).

Reporting groups

Reporting group title	Placebo SC Q4W and Placebo IV Q8W
-----------------------	-----------------------------------

Reporting group description:

Subjects randomized to the matching placebo SC Q4W arm received SC placebo in a manner similar to the SC loading dose of the active groups (placebo loading dose) on Day 1 and then an SC injection of placebo at weeks 4, 8, and 12 for a total of 4 doses. Matching placebo IV Q8W was received on Day 1 and at Week 8.

Reporting group title	Fasinumab 6 mg SC Q4W and Placebo IV Q8W
-----------------------	--

Reporting group description:

Subjects randomized to the fasinumab 6 mg SC Q4W arm received fasinumab 12 mg SC on Day 1 (loading dose) and then 6 mg SC (planned maintenance dose) at Weeks 4, 8, and 12 for a total of 4 doses. Matching placebo was received via intravenous (IV) infusion Q8W on Day 1 and at Week 8.

Reporting group title	Fasinumab 9 mg SC Q4W and Placebo IV Q8W
-----------------------	--

Reporting group description:

Subjects randomized to the fasinumab 9 mg SC Q4W arm received 18 mg SC on day 1 (loading dose) and then 9 mg SC (planned maintenance dose) at weeks 4, 8, and 12 for a total of 4 doses. Matching placebo IV Q8W was received on Day 1 and at Week 8.

Reporting group title	Fasinumab 9 mg IV Q8W and Placebo SC Q4W
-----------------------	--

Reporting group description:

Subjects randomized to the fasinumab 9 mg IV Q8W arm received IV infusions of fasinumab 9 mg on Day 1 and Week 8, for a total of 2 doses. Matching placebo SC Q4W was received on day 1 and at weeks 4, 8, and 12.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 January 2016	Following changes were made: - Clarified that the maximum dose of paracetamol/acetaminophen permitted as rescue medication for LBP is 2,600 mg (325 mg x 8) per day in North America, and 2,500 mg (500 mg x 5) per day in Europe, - added confirmed elevated screening ALT or AST > 2.5 x upper limit of normal (ULN) as an exclusion criterion, - added continued noncompliance with protocol-defined maximum paracetamol/acetaminophen use after appropriate counseling as a reason for permanent discontinuation of study drug, - changed the notification requirement for emergency unblinding to "The investigator should promptly document and explain to the sponsor any premature unblinding." - Made administrative edits.
20 January 2016	Following changes were made: - Incorporated revisions to ensure a consistent approach across the fasinumab program, for imaging requirements: added further detail on imaging requirements during the screening period, - specified that radiographs and/or MRI will or must (rather than should) be performed on any joint following report of a clinically significant worsening or exacerbation of pain in that joint, - specified that prior to the pre-randomization visit, - an MRI of the affected joint must be performed and assessed by the central reader for any screening radiographs that are inconclusive for potential joint-related findings and for any knee or hip joint that has a baseline K-L score of ≥ 3 , and specified that, before a subject was randomized, confirmation must be received that there are no exclusionary finding on screening MRIs, - updated the study stopping rules to state that the DMC may recommend temporarily halting the study if the DMC has significant concerns regarding a meaningful imbalance in joint-related AEs, SNS dysfunction, or neurosensory disturbances, - added willingness to consider TJR if necessary as an inclusion criterion, modified exclusion criteria, - added clinically significant sensory and motor neurologic events grade >2 according to Common Terminology Criteria for Adverse Events (CTCAE) v.4 as a new reason for permanent discontinuation of study drug; - specified that sites should use CTCAE v.4 criteria throughout the study for consistency, - added new signs and symptoms indicative of carpal tunnel syndrome as a new reason for permanent discontinuation of study drug, - modified schedule of events, - study visit descriptions and study procedures, - refined and further detail text describing safety reporting, - and monitoring of adverse events of special interest (AESI), - refined and further detail the statistical plan, made minor clarifications and administrative edits.
26 August 2016	Following changes were made: - Added additional collection time points for urine to better monitor patient safety, - added creatinine and phosphorous to routine serum and urine chemistry sampling to better monitor patient safety, - updated the terminology from "destructive arthropathy" to "adjudicated arthropathy" to allow for consistency within the program and to allow for a more accurate description of the joint events in the trial, - updated the personnel who have the authorization to approve rescreening, - updated the reporting time for AESIs from 7 days to 24 hours.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
------	--------------	--------------

14 October 2016	The Food and Drug Administration (FDA) placed the study on partial clinical hold following an adjudicated arthropathy (AA) event that occurred in a subject with chronic low back pain (LBP) and a history of advanced osteoarthritis (OA) (K-L = 3 in the AA joint at screening).	-
-----------------	--	---

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As a result of the partial clinical hold the Sponsor made a decision not to amend the protocol and consequently randomization and dosing was prematurely discontinued.

Notes:
