

Clinical trial results:

A RANDOMIZED, DOUBLE-BLIND, PLACEBO CONTROLLED, PARALLEL GROUP STUDY TO DETERMINE THE EFFICACY, SAFETY AND TOLERABILITY OF ONCE DAILY ORAL ZPL-3893787-18 (30 MG) ADMINISTERED FOR 12 WEEKS IN ADULT SUBJECTS WITH MODERATE TO SEVERE PLAQUE PSORIASIS.

Summary

EudraCT number	2015-003812-19

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 December 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 December 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of an oral 30 mg dose of ZPL-3893787-18 when administered once daily, for 12 weeks, to subjects with moderate to severe plaque psoriasis.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 39
Country: Number of subjects enrolled	United Kingdom: 46
Country: Number of subjects enrolled	Bulgaria: 33
Country: Number of subjects enrolled	United States: 11
Worldwide total number of subjects	129
EEA total number of subjects	118

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	119

From 65 to 84 years	10
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Each subject had a screening visit to confirm suitability to enter the study, followed by 7-day run-in period.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	ZPL-389

Arm description:

ZPL-3893787 30 mg once daily

Arm type	Experimental
Investigational medicinal product name	ZPL-3893787
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Each subject was given 30 mg ZPL-3893787 capsules, to be taken orally OD for 12 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Matched placebo once daily

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Each subject was given 30 mg capsules of matching placebo, to be taken orally OD for 12 weeks.

Number of subjects in period 1	ZPL-389	Placebo
Started	87	42
Completed	66	35
Not completed	21	7
Consent withdrawn by subject	8	5
Adverse event, non-fatal	8	-
Pregnancy	-	1
Lost to follow-up	-	1
Lack of efficacy	4	-
Failure to comply with dosing & evaluations	1	-

Reporting group description: Matched placebo once daily	

Primary: Percent Change From Baseline in Psoriasis Assessment of Severity Index (PASI) at Week 12

End point title	Percent Change From Baseline in Psoriasis Assessment of Severity Index (PASI) at Week 12
End point description: The PASI is an assessment routinely used for evaluating and grading the severity of psoriatic lesions and their response to therapy. PASI divides the body into 4 regions: the head, trunk, upper extremities (arms) and lower extremities (legs). Each of these areas is assessed separately for erythema, induration and scaling; these symptoms are scored on a 5-point scale from 0-4, where 0 = no symptoms and 4 = very marked. The PASI produces a numeric score that can range from 0 to 72. A higher score indicates more severe disease. A PASI 75 response represents a reduction of at least 75% from baseline in the PASI score.	
End point type	Primary
End point timeframe: From baseline to week 12.	

End point values	ZPL-389	Placebo		
Subject group type	Reporting group	Reporting group

Secondary: Improvement in Investigator Global Assessment (IGA) at Week 12

End point title	Improvement in Investigator Global Assessment (IGA) at Week 12
End point description:	
An overall assessment of the severity of psoriasis was made, by the investigator, using the IGA at each visit. IGA scores take values on a 5-point scale from 0-4, where 0 = clear to 4 = severe disease. Responder is defined as a score of clear or almost clear, or a reduction of ≥ 2 levels. Success is defined as a score of clear or almost clear. Subjects with discontinued and missing data categories at Week 12 were considered non-responders.
