Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to determine the benefit of enzalutamide plus ADT as compared to placebo plus ADT as assessed by radiographic progression-free survival (rPFS) based on independent central review (ICR).

Protection of trial subjects:

This clinical study was written, conducted and reported in accordance with the protocol, International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice (GCP) Guidelines, and applicable local regulations, including the European Directive 2001/20/EC, on the protection of human rights, and with the ethical principles that have their origin in the Declaration of Helsinki. Astellas ensures that the use and disclosure of protected health information (PHI) obtained during a research study complies with the federal, national and/or regional legislation related to the privacy and protection of personal information.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 March 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	31 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Worldwide total number of subjects	1150
EEA total number of subjects	544

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	300
From 65 to 84 years	824
85 years and over	26

Subject disposition

Recruitment

Recruitment details:

Participants with metastatic hormone sensitive prostate cancer (mHSPC) were enrolled in 204 study sites worldwide.

Pre-assignment

Screening details:

The randomization was stratified by volume of disease (low vs high) and prior docetaxel therapy for prostate cancer (no prior docetaxel, 1 to 5 cycles, 6 cycles).

Period 1

Period 1 title	Double Blind Period (up to 35 months)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Enzalutamide + Androgen Deprivation Therapy (ADT)

Arm description:

Participants received 160 mg of enzalutamide orally once daily during double blind treatment period until radiographic progression was documented or until the participants started an investigational agent or new therapy for treatment of prostate cancer or until any other discontinuation criterion was met. Eligible participants who received enzalutamide during double blind treatment period and provided informed consent to take part in open-label period continued to receive 160 mg enzalutamide orally once daily in open-label period until disease progression, unacceptable toxicity or any other discontinuation criteria were met. ADT (either bilateral orchiectomy or luteinizing hormone-releasing hormone (LHRH) agonist/antagonist) was maintained during study treatment as per standard of care and provided by the site's pharmacy stock.

Arm type	Experimental
Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	MDV3100
Other name	Xtandi
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received 4 capsules (40 mg each) of enzalutamide orally once a day, for a total daily dose of 160 mg. Treatment was given with or without food and as close as possible to the same time each day.

Arm title	Placebo + Androgen Deprivation Therapy (ADT)
------------------	--

Arm description:

Participants received enzalutamide matching placebo orally once daily during double blind treatment period until radiographic progression was documented or until the participants started an investigational agent or new therapy for treatment of prostate cancer or until any other discontinuation criterion was met. Eligible participants who received enzalutamide matching placebo during double blind treatment period and provided informed consent to take part in open-label period switched to receive 160 mg enzalutamide orally once daily in open-label period until disease progression, unacceptable toxicity or any other discontinuation criteria were met. ADT (either bilateral orchiectomy or LHRH agonist/antagonist) was maintained during study treatment as per standard of care and provided by the site's pharmacy stock.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received 4 capsules of matching placebo orally once a day. Treatment was given with or without food and as close as possible to the same time each day.

Number of subjects in period 1	Enzalutamide + Androgen Deprivation Therapy (ADT)	Placebo + Androgen Deprivation Therapy (ADT)

Primary: Radiographic Progression-Free Survival (rPFS) Based on Independent Central Review (ICR) of Bone Scan According to Prostate Cancer Clinical Trials Working Group 2 (PCWG2) Criteria

End point title	Radiographic Progression-Free Survival (rPFS) Based on Independent Central Review (ICR) of Bone Scan According to Prostate Cancer Clinical Trials Working Group 2 (PCWG2) Criteria
-----------------	--

End point description:

rPFS was calculated as the time from the date of randomization to the first objective evidence of radiographic progression disease (rPD) at any time or death up to 24 weeks after study drug discontinuation without documented radiographic progression, whichever occurred first. rPD was defined as progressive disease by RECIST version 1.1 for soft tissue disease or by appearance of 2 or more new lesions on bone scan compared to baseline or week 13 according to PCWG2 criteria, as assessed by ICR or death. In participants with no rPFS event, rPFS was censored on the date of last evaluable radiographic assessment prior to the data analysis cutoff date. In participants with no baseline radiographic assessment, participants with no postbaseline radiographic assessments and participants with all postbaseline radiographic assessments documented as "not evaluable (NE)," rPFS was censored on the date of randomization. ITT population. "99999" denotes data not reached due to low number of events.

End point type	Primary
----------------	---------

End point timeframe:

From randomization until the data cut-off date of 14 October 2018; maximum duration of treatment was 26.6 months

End point values	Enzalutamide + Androgen Deprivation Therapy (ADT)	Placebo + Androgen Deprivation Therapy

PSA Undetectable Rate Treatment Comparison	
Comparison groups	Enzalutamide + Androgen Deprivation Therapy (ADT) v Placebo + Androgen Deprivation Therapy
Number of subjects included in analysis	1017
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 ^[6]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Difference in rate
Point estimate	50.5

Confidence interval	
level	95 %
sides	2-sided
lower limit	45.3
upper limit	55.7

Notes:

[6] - Stratified by volume of disease (low vs high) and prior docetaxel use (yes vs no) during screening period.

Secondary: Objective Response Rate (ORR)

End point title	Objective Response Rate (ORR)
-----------------	-------------------------------

End point description:

The ORR was calculated as the percentage of participants who achieved a completed response (CR) or a partial response (PR) (unconfirmed responses) in their soft tissue disease using the Response Evaluation Criteria in Solid Tumors (RECIST) version 1.1 assessed by ICR. ITT participants with measurable disease at baseline.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to the data cut-off date of 14 October 2018; maximum duration of treatment was 26.6 months

End point values	Enzalutamide + Androgen Deprivation Therapy (ADT)	Placebo + Androgen Deprivation Therapy		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	177	182		
Units: percentage of participants				
number (confidence interval 95%)				
percentage of participants	83.1 (76.7 to 88.3)	63.7 (56.3 to 70.7)

[7] - Stratified by volume of disease (low vs high) and prior docetaxel use (yes vs no) during screening period.

Secondary: Time to Deterioration in Urinary Symptoms

End point title	Time to Deterioration in Urinary Symptoms
-----------------	---

End point description:

In participants with deterioration, time to deterioration was calculated as the time interval between randomization and the first deterioration in urinary symptoms at any postbaseline visit. Deterioration in urinary symptoms was defined as an increase in the Quality of Life Prostate-specific Questionnaire (QLQ-PR25) modified urinary symptoms. Subscale score by $\geq 50\%$ of the standard deviation observed in the QLQ-PR25 modified urinary symptoms subscale score at baseline. Modified urinary symptoms subscale score consisted of 3-items (Q31-Q33) from the QLQ-PR25, each scored from 1 (not at all) to 4 (very much). Total modified urinary symptoms subscale score ranges from 0-100, higher scores represent a higher level of symptomatology/problems. In participants without deterioration in urinary symptoms, the time to deterioration in urinary symptoms was censored on the date the last urinary symptoms QLQ-PR25 score was calculable. ITT. "99999" denotes data not reached due to low number of events.

End point type	Secondary

Notes:

[8] - Stratified by volume of disease (low vs high) and prior docetaxel use (yes vs no) during screening period.

Secondary: Time to First Symptomatic Skeletal Event (SSE)

End point title	Time to First Symptomatic Skeletal Event (SSE)
-----------------	--

End point description:

Time to first SSE was calculated as the time from randomization to the occurrence of the first SSE prior to the data analysis cut-off date. An SSE was defined as radiation to bone, surgery to bone, clinically apparent pathological bone fracture, or spinal cord compression. In participants with no SSE by the time of the data cut-off point, time to SSE was censored on the last visit date or the date of randomization, whichever occurred last. ITT population. "99999" denotes data not reached due to low number of events.

Secondary: Time to Castration Resistance

End point title	Time to Castration Resistance
End point description:	
Time to castration resistance was calculated as the time from randomization to the first castration-resistant event. A castration resistance event was defined as any of the following in the presence of castrate levels of testosterone (< 50 ng/dL): radiographic disease progression, PSA progression or SSE, whichever occurred first. In participants with no documented castration resistance event, the time to castration resistance was censored on the latest date from: the date of last radiologic assessment, the last PSA sample taken prior to the start of any new prostate cancer therapy and prior to 2 or more consecutive missed PSA assessments (if applicable), and the last visit date performed. ITT population. "99999" denotes data not reached due to low number of events.

Secondary: Time to Deterioration of Quality of Life (QoL) in Functional Assessment of Cancer Therapy-Prostate (FACT-P)

End point title	Time to Deterioration of Quality of Life (QoL) in Functional Assessment of Cancer Therapy-Prostate (FACT-P)
-----------------	---

End point description:

Time to deterioration of QoL was calculated as the time interval from the date of randomization to the first date a decline from baseline of 10 points or more in the FACT-P total score was recorded. The FACT-P consists of 27 core items that assess participant function in 4 domains and 12 prostate cancer-related items grouped into 5 subscales as follows: physical wellbeing, social/family wellbeing, emotional wellbeing, functional wellbeing and prostate cancer subscale. Each item is rated on a 0 to 4 Likert-type scale. The FACT-P total score is the sum of all 5 subscale scores of the FACT-P questionnaire and ranges from 0 to 156), where high score represent better quality of life. In participants without FACT-P progression, the time to deterioration of QoL was censored on the date of the last FACT-P total score was calculable. ITT population.

Secondary: Time to Pain Progression Based on Brief Pain Inventory-Short Form (BPI-SF)

End point title	Time to Pain Progression Based on Brief Pain Inventory-Short Form (BPI-SF)
-----------------	--

End point description:

Time to pain progression was defined as time from randomization to the first pain progression event. Pain progression was defined as an increase of $\geq 30\%$ from baseline in the average BPI-SF pain severity score. BPI-SF contains 9 questions with rating scales from 0 (no pain/no interference) to 10 (worst pain/interferes completely). Total score was calculated as the average of each question. Higher scores represent a higher level of pain or interference. In participants with no pain progression event, time to pain progression was censored on the last visit date where BPI-SF was collected. ITT population.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug up to 30 days after last dose of study or prior to initiation of new therapy for prostate cancer, whichever occurred first. Maximum duration of treatment to the data cut-off date of 28 May 2021 was 58.6 months

Adverse event reporting additional description:

Safety Analysis Set (SAF) consisted of all randomized participants who received at least one dose of study drug.

Assessment type	Systematic

Reporting groups

Reporting group title	Enzalutamide + Androgen Deprivation Therapy (ADT)
-----------------------	---

Reporting group description:

Participants received 160 mg of enzalutamide orally once daily during double blind treatment period until radiographic progression was documented or until the participants started an investigational agent or new therapy for treatment of prostate cancer or until any other discontinuation criterion was met. Eligible participants who received enzalutamide during double blind treatment period and provided informed consent to take part in open-label period continued to receive 160 mg enzalutamide orally once daily in open-label period until disease progression, unacceptable toxicity or any other discontinuation criteria were met. ADT (either bilateral orchiectomy or LHRH agonist/antagonist) was maintained during study treatment as per standard of care and provided by the site's pharmacy stock.

Reporting group title	Placebo + Androgen Deprivation Therapy
-----------------------	--

Reporting group description:

Participants received enzalutamide matching placebo orally once daily during double blind treatment period until radiographic progression was documented or until the participants started an investigational agent or new therapy for treatment of prostate cancer or until any other discontinuation criterion was met. This arm represents only double blind period.

Reporting group title	Placebo cross-over Enzalutamide
-----------------------	---------------------------------

Reporting group description:

Eligible participants who received enzalutamide matching placebo during double blind treatment period and provided informed consent to take part in open-label period switched to receive 160 mg enzalutamide orally once daily in open-label period until disease progression, unacceptable toxicity or any other discontinuation criteria were met. ADT (either bilateral orchiectomy or LHRH agonist/antagonist) was maintained during study treatment as per standard of care and provided by the site's pharmacy stock. This arm represents only the open-label extension period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 June 2016	The changes included: • Added 2 exclusion criteria to o exclude patients who had not received bisphosphonates or denosumab at a stable dose (unless diagnosed with osteoporosis) and o exclude patients who had shown a hypersensitivity reaction to any of the study capsule components. • Revised test drug information to remove information related to tablet formulations and add information related to the capsule formulation of study drug and placebo (chemical name, physical description and storage requirements).
14 December 2017	The changes included: • Revised the number of events required for the primary endpoint to reflect that primary analysis was to occur when 262 rPD events were confirmed by independent central imaging review. All secondary endpoints were to be evaluated at the time of primary analysis (and are considered final, except for OS [Section 5.5.5]). • Specified a step-wise approach for the statistical testing of the key secondary endpoints. To maintain the family-wise 2-sided type I error rate at 0.05, a parallel testing strategy between OS (with allocated type I error rate 0.04) and the other 4 endpoints (with allocated type I error rate 0.01) was developed. If the interim results of the OS analysis were statistically significant, no further analysis of OS would be completed. • Specified that unblinding of study treatment assignment could have been performed if a patient discontinued due to disease progression and in the investigator's opinion this information was necessary to determine the next course of therapy.
10 December 2018	The changes included: • Added an open-label extension period. Following unblinding at the end of the doubleblind period and demonstration of a statistically significant advantage of enzalutamide over placebo when added to ADT, as assessed by the primary endpoint, all eligible patients could be treated on study with open-label enzalutamide at the discretion of the patient and investigator. • Specific QoL assessments related to deterioration of urinary symptoms and QoL were added to the secondary endpoints.
31 March 2021	The Changes included: • Survival follow-up is considered complete and patients will be discontinued from long term follow-up when a final number of OS events has been reached. Sites will no longer be required to collect assessments at that time. • Following the final OS analysis, patients continuing to receive clinical benefit from enzalutamide treatment may continue open-label treatment in another Astellas-sponsored study, provided they have not met any discontinuation criteria.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
