

## Clinical trial results:

### A Randomised, Double-Blind, Placebo-Controlled Multicentre Clinical Trial of Inhaled Molgramostim in Autoimmune Pulmonary Alveolar Proteinosis Patients.

#### Summary

EudraCT number	2015-003878-33
Trial protocol	GB DK NL DE GR ES IT PT
Global end of trial date	27 September 2019

#### Results information

Result version number	v1
This version publication date	18 February 2021
First version publication date	18 February 2021

#### Trial information

##### Trial identification

Sponsor protocol code	MOL-PAP-002
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02702180
WHO universal trial number (UTN)	-
Other trial identifiers	IMPALA: IMPALA

Notes:

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 November 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 April 2019
Global end of trial reached?	Yes
Global end of trial date	27 September 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To compare efficacy of inhaled molgramostim on the Alveolar-arterial oxygen difference ((A-a)DO<sub>2</sub>) with placebo after 24-weeks treatment.

Protection of trial subjects:

Subjects could be discontinued from treatment and assessments at any time, if deemed necessary by the investigator.

Potential reasons for discontinuation of treatment included lack of efficacy/worsening of disease and unacceptable AE.

WLL was applied as rescue therapy. The criterion for performing WLL was clinical worsening of aPAP based on symptoms, reduced exercise capacity and/or findings of hypoxemia or desaturation according to the investigator's judgement.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 March 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	Russian Federation: 8
Country: Number of subjects enrolled	Japan: 40
Country: Number of subjects enrolled	United States: 4
Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Korea, Republic of: 6
Country: Number of subjects enrolled	Turkey: 10
Country: Number of subjects enrolled	Israel: 7
Country: Number of subjects enrolled	Netherlands: 6
Country: Number of subjects enrolled	Portugal: 3
Country: Number of subjects enrolled	Slovakia: 4
Country: Number of subjects enrolled	Spain: 2
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	Germany: 16
Country: Number of subjects enrolled	Greece: 4

Country: Number of subjects enrolled	Italy: 13
Worldwide total number of subjects	138
EEA total number of subjects	61

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	113
From 65 to 84 years	25
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Key incl. criteria: aPAP (diagnosed by CT/biopsy/BAL, and increased GM-CSF autoantibodies); confirmed stable/progressive for  $\geq 2$  months prior to Baseline; (A-a)DO<sub>2</sub>  $\geq 25$  mmHg; PaO<sub>2</sub>  $< 75$  mmHg at rest/desaturation  $> 4$  % points in 6MWT.

235 were screened. 138 entered the DB period. Most Scr. failures were related to key incl. criteria listed above.

### Period 1

Period 1 title	Double-blind (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	MOL-OD

Arm description:

Molgramostim 300 µg nebuliser solution administered once-daily; referred to as MOL-OD.

Arm type	Experimental
Investigational medicinal product name	Molgramostim nebuliser solution 300 µg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Molgramostim nebuliser solution 300 µg, administered once-daily by inhalation using an investigational eFlow® Nebuliser System.

<b>Arm title</b>	MOL-INT
------------------	---------

Arm description:

Molgramostim 300 µg nebuliser solution and matching placebo administered intermittently (12 cycles of 7 days molgramostim nebuliser solution, 7 days placebo; both administered once-daily); referred to as MOL-INT.

Arm type	Experimental
Investigational medicinal product name	Molgramostim nebuliser solution 300 µg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Molgramostim nebuliser solution 300 µg, administered once-daily every other week by inhalation using an investigational eFlow® Nebuliser System.

Investigational medicinal product name	Placebo nebuliser solution
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

---

**Dosage and administration details:**

Placebo nebuliser solution administered once-daily every other week by inhalation using an investigational eFlow® Nebuliser System.

<b>Arm title</b>	Placebo
Arm description: Placebo nebuliser solution administered once-daily.	
Arm type	Placebo
Investigational medicinal product name	Placebo nebuliser solution
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

**Dosage and administration details:**

Placebo nebuliser solution administered once-daily by inhalation using an investigational eFlow® Nebuliser System.

<b>Number of subjects in period 1</b>	MOL-OD	MOL-INT	Placebo
Started	46	45	47
Completed	45	44	43
Not completed	1	1	4
Consent withdrawn by subject	1	1	-
Adverse event, non-fatal	-	-	1
Lack of efficacy	-	-	1
Protocol deviation	-	-	2

## Baseline characteristics

### Reporting groups

Reporting group title	MOL-OD
Reporting group description: Molgramostim 300 µg nebuliser solution administered once-daily; referred to as MOL-OD.	
Reporting group title	MOL-INT
Reporting group description: Molgramostim 300 µg nebuliser solution and matching placebo administered intermittently (12 cycles of 7 days molgramostim nebuliser solution, 7 days placebo; both administered once-daily); referred to as MOL-INT.	
Reporting group title	Placebo
Reporting group description: Placebo nebuliser solution administered once-daily.	

Reporting group values	MOL-OD	MOL-INT	Placebo
Number of subjects	46	45	47
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	34	38	41
From 65-84 years	12	7	6
85 years and over	0	0	0
Age continuous Units: years			
arithmetic mean	54.0	49.2	46.1
standard deviation	± 13.32	± 14.06	± 14.84
Gender categorical Units: Subjects			
Female	18	19	22
Male	28	26	25

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 January 2016	Additions reflecting 1) the implementation of a data safety monitoring board and 2) new data from long-term toxicity study.
11 October 2016	Exclusion criteria regarding immunosuppressive treatment updated to only include treatment causing significant immunosuppression. Exclusion criterion regarding liver impairment changed to from 3 to 4 times the upper limit of aspartate aminotransferase and alanine aminotransferase. Open-label FU treatment changed from only to be given in case of worsening of (A-a)DO <sub>2</sub> of more than 10 mmHg from baseline, to be given according to investigator's discretion and if so, dosed intermittently 7-days on / 7-days off treatment for 24 weeks, thereafter dosing according to investigator's judgement. Criterion for rescue treatment revised to comprise an overall evaluation of treatment requirement by the investigator, including symptoms reported by the patient, rather than only in case of worsening of (A-a)DO <sub>2</sub> of more than 10 mmHg from baseline. Analysis for antibodies against the excipients polyethylene glycol and recombinant human albumin were added.
06 June 2017	Sample size increased to 90 randomized. Updates to key efficacy objectives/endpoints (3 key secondary: 6MWT, SGRQ, WLL). Key secondary objective for safety added. FU for subjects included after this amendment is 24 weeks. FU for subjects included before is 48 weeks. Molgramostim treatment in the FU period applied for all subjects. Additional efficacy assessments (dyspnea, cough, quality of life) and safety laboratory assessments added in the FU period. Possibility to conduct WLL in the screening period removed. Exclusion criterion re. time since last WLL reduced to 1 month, criteria re. liver/renal impairment removed. Statistical methods updated (e.g., to account for multiplicity of key secondary endpoints). Assessment of anti-drug-antibodies added at week 4.
01 December 2017	Plan for blinded sample size re-estimation added. Statistical methodology for the primary analyses aligned across regions.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
