

Clinical trial results:

A Study to Evaluate the Efficacy, Safety, Tolerability, Pharmacokinetics, and Pharmacodynamics of BII067 Administered to Adult Subjects with Amyotrophic Lateral Sclerosis and Confirmed Superoxide Dismutase 1 Mutation

Summary

EudraCT number	2015-004098-33
Trial protocol	SE DE GB BE DK PL IT
Global end of trial date	16 July 2021

Results information

Result version number	v2 (current)
This version publication date	24 August 2023
First version publication date	31 July 2022
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Updated '99999' explanations and added number of subjects analysed for Day 85 for endpoints: Cmax and Tmax.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 July 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	16 July 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of Parts A and B of this study are to evaluate the safety, tolerability, and pharmacokinetics (PK) of ascending doses of BIIB067 (tofersen) in adults with ALS and a documented superoxide dismutase 1 (SOD1) mutation. The secondary objective of Parts A and B of this study is to evaluate the effects of BIIB067 on levels of total SOD1 protein in the cerebrospinal fluid (CSF). The primary objective of Part C of this study is to evaluate the clinical efficacy of BIIB067 administered to adults with ALS and a confirmed SOD1 mutation. The secondary objectives of Part C are to evaluate the safety, tolerability, pharmacodynamic (PD), and biomarker effects of BIIB067.

Protection of trial subjects:

Written informed consent was obtained from each subject or subject's legally authorized representative (e.g., legal guardian), as applicable, prior to evaluations performed for eligibility. Subjects or the subject's legally authorized representative were given adequate time to review the information in the informed consent/assent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 8
Country: Number of subjects enrolled	Canada: 27
Country: Number of subjects enrolled	Japan: 7
Country: Number of subjects enrolled	United States: 93
Country: Number of subjects enrolled	Germany: 11
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Belgium: 14
Country: Number of subjects enrolled	Denmark: 1
Country: Number of subjects enrolled	United Kingdom: 12
Worldwide total number of subjects	178
EEA total number of subjects	39

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	156
From 65 to 84 years	22
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled at the investigative sites in the Belgium, Canada, Denmark, France, Germany, Italy, Japan, United Kingdom, and the United States from 20 January 2016 to 16 July 2021.

Pre-assignment

Screening details:

Study included SAD (Part A), MAD (Part B) and pivotal portions (Part C). Total 176 subjects were enrolled 20 into Part A, 50 into Part B including 2 subjects who completed Part A, were re-enrolled in Part B after 12-week washout period, hence 2 subjects were analysed in both Parts A, B (for total of 68 in Parts A, B), Part C enrolled 108 subjects.

Period 1

Period 1 title	Parts A, B, and C (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A-SAD: Combined Placebo

Arm description:

Subjects were administered BIIB067-matching placebo once by intrathecal bolus injection on Day 1 of Cohorts 1, 2, 3, and 4 respectively.

Arm type	Placebo
Investigational medicinal product name	BIIB067-matching Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

Subjects were administered BIIB067-matching placebo as specified in treatment arm.

Arm title	Part A-SAD: Cohort 1: BIIB067 10 mg
------------------	-------------------------------------

Arm description:

Subjects were administered BIIB067 10 mg once by intrathecal bolus injection on Day 1.

Arm type	Experimental
Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

Subjects were administered BIIB067 10 mg as specified in the treatment arm.

Arm title	Part A-SAD: Cohort 2: BIIB067 20 mg
------------------	-------------------------------------

Arm description:

Subjects were administered BIIB067 20 mg once by intrathecal bolus injection on Day 1 of Cohort 2 after the safety review of Cohort 1.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067 20 mg as specified in the treatment arm.	
Arm title	Part A-SAD: Cohort 3: BIIB067 40 mg
Arm description:	
Subjects were administered BIIB067 40 mg once by intrathecal bolus injection on Day 1 of Cohort 3 after the safety review of Cohort 2.	
Arm type	Experimental
Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067 40 mg as specified in the treatment arm.	
Arm title	Part A-SAD: Cohort 4: BIIB067 60 mg
Arm description:	
Subjects were administered BIIB067 60 mg once by intrathecal bolus injection on Day 1 of Cohort 4 after the safety review of Cohort 3.	
Arm type	Experimental
Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067 60 mg as specified in the treatment arm.	
Arm title	Part B-MAD: Combined Placebo
Arm description:	
Subjects were administered BIIB067-matching placebo, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection.	
Arm type	Placebo
Investigational medicinal product name	BIIB067-matching Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067-matching placebo as specified in treatment arm.	
Arm title	Part B-MAD: Cohort 5: BIIB067 20 mg
Arm description:	
Subjects were administered BIIB067 20 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection.	
Arm type	Experimental

Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067 20 mg as specified in the treatment arm.	
Arm title	Part B-MAD: Cohort 6: BIIB067 40 mg
Arm description:	
Subjects were administered BIIB067 40 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection after the safety and PK review of Cohort 5.	
Arm type	Experimental
Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067 40 mg as specified in the treatment arm.	
Arm title	Part B-MAD: Cohort 7: BIIB067 60 mg
Arm description:	
Subjects were administered BIIB067 60 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection after the safety, PK review and superoxide dismutase 1 (SOD1) PD review of Cohort 6.	
Arm type	Experimental
Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067 60 mg as specified in the treatment arm.	
Arm title	Part B-MAD: Cohort 8: BIIB067 100 mg
Arm description:	
Subjects were administered BIIB067 100 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection after the safety, PK review and SOD1 PD review of Cohort 7.	
Arm type	Experimental
Investigational medicinal product name	BIIB067
Investigational medicinal product code	ISIS666853
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067 100 mg as specified in the treatment arm.	
Arm title	Part C-Pivotal: Placebo
Arm description:	
Subjects were administered BIIB067-matching placebo, 3 loading doses administered once every 2 weeks on Days 1, 15, 29 followed by 5 maintenance doses administered once every 4 weeks on Days 57, 85, 113, 141, 169 up to 24 weeks by intrathecal bolus injection.	
Arm type	Placebo

Investigational medicinal product name	BIIB067-matching Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
Subjects were administered BIIB067-matching placebo as specified in treatment arm.

Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R)			
ALSFRS-R measures respiratory, bulbar function, gross, and fine motor skills. 12 questions, each scored from 0-4 (no-full function), for a total score of 48. Scores decline with disease progression. Higher scores represent better function. Modified ITT (mITT) population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N=0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 21, and 39 for the arms mentioned respectively. 99999=this study specific measure was only analyzed for Part C arms groups.			
Units: score on a scale arithmetic mean standard deviation	99999 ± 99999	99999 ± 99999	99999 ± 99999
CSF Levels of Total SOD1 Protein Concentration			
PD population is the subset of the ITT population with at least 1 post-dose PD measurement in Part B. mITT population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N= 0, 0, 0, 0, 0, 4, 1, 1, 1, 4, 21, and 38 for the arms mentioned respectively. 99999=this study specific measure was only analyzed for Part B and C arms groups.			
Units: nanograms per milliliter (ng/mL) geometric mean full range (min-max)	99999 99999 to 99999	99999 99999 to 99999	99999 99999 to 99999
Percentage (%) Predicted Slow Vital Capacity (SVC)			
mITT population included all subjects who met the prognostic enrichment criteria for rapid disease			

progression in Part C who were randomized and received at least 1 dose of study treatment. N=0, 0, 0, 0, 0, 0, 0, 0, 21, and 39 for the arms mentioned respectively. 99999=this study specific measure was only analyzed for Part C arms groups.			
Units: percent predicted arithmetic mean standard deviation	99999 ± 99999	99999 ± 99999	99999 ± 99999
Handheld Dynamometry (HHD) Megascore as Measured by the HHD Device			
16 muscle groups were evaluated in upper, lower extremities. Strength determinations were converted to Z scores, averaged for an HHD megascore. Muscle strength values normalized to Z scores as (post-baseline measurements – mean)/SD, averaged to provide HHD overall megascore.mITT population=all subjects who met prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N=0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 21, 39 for arms mentioned respectively. 99999=this study specific measure was only analyzed for Part C arms groups.			
Units: score on a scale arithmetic mean standard deviation	99999 ± 99999	99999 ± 99999	99999 ± 99999
Neurofilament Light Chain (NFL) Concentration in Plasma			
mITT population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N=0, 0, 0, 0, 0, 0, 0, 0, 21, and 39 for the arms mentioned respectively. 99999=this study specific measure was only analyzed for Part C arms groups.

Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R)			
ALSFRS-R measures respiratory, bulbar function, gross, and fine motor skills. 12 questions, each scored from 0-4 (no-full function), for a total score of 48. Scores decline with disease progression. Higher scores represent better function. Modified ITT (mITT) population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N=0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 21, and 39 for the arms mentioned respectively. 99999=this study specific measure was only analyzed for Part C arms groups.			
Units: score on a scale arithmetic mean standard deviation	99999 ± 99999	99999 ± 99999	99999 ± 99999
CSF Levels of Total SOD1 Protein Concentration			
PD population is the subset of the ITT population with at least 1 post-dose PD measurement in Part B. mITT population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N= 0, 0, 0, 0, 0, 4, 1, 1, 1, 4, 21, and 38 for the arms mentioned respectively. 99999=this study specific measure was only analyzed for Part B and C arms groups.			
Units: nanograms per milliliter (ng/mL) geometric mean full range (min-max)	102.00 102.00 to 102.00	125.00 125.00 to 125.00	82.80 82.8 to 82.8
Percentage (%) Predicted Slow Vital Capacity (SVC)			
mITT population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N=0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 21, and 39 for the arms mentioned respectively. 99999=this study specific measure was only analyzed for Part C arms groups.			
Units: percent predicted arithmetic mean standard deviation	99999 ± 99999	99999 ± 99999	99999 ± 99999

Handheld Dynamometry (HHD) Megascore as Measured by the HHD Device			
16 muscle groups were evaluated in upper, lower extremities. Strength determinations were converted to Z scores, averaged for an HHD megascore. Muscle strength values normalized to Z scores as (post-baseline measurements – mean)/SD, averaged to provide HHD overall megascore.mITT population=all subjects who met prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment. N=0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 21, 39 for arms mentioned respectively. 99999=this study specific measure was only analyzed for Part C arms groups.

End points

End points reporting groups

Reporting group title	Part A-SAD: Combined Placebo
Reporting group description: Subjects were administered BIIB067-matching placebo once by intrathecal bolus injection on Day 1 of Cohorts 1, 2, 3, and 4 respectively.	
Reporting group title	Part A-SAD: Cohort 1: BIIB067 10 mg
Reporting group description: Subjects were administered BIIB067 10 mg once by intrathecal bolus injection on Day 1.	
Reporting group title	Part A-SAD: Cohort 2: BIIB067 20 mg
Reporting group description: Subjects were administered BIIB067 20 mg once by intrathecal bolus injection on Day 1 of Cohort 2 after the safety review of Cohort 1.	
Reporting group title	Part A-SAD: Cohort 3: BIIB067 40 mg
Reporting group description: Subjects were administered BIIB067 40 mg once by intrathecal bolus injection on Day 1 of Cohort 3 after the safety review of Cohort 2.	
Reporting group title	Part A-SAD: Cohort 4: BIIB067 60 mg
Reporting group description: Subjects were administered BIIB067 60 mg once by intrathecal bolus injection on Day 1 of Cohort 4 after the safety review of Cohort 3.	
Reporting group title	Part B-MAD: Combined Placebo
Reporting group description: Subjects were administered BIIB067-matching placebo, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection.	
Reporting group title	Part B-MAD: Cohort 5: BIIB067 20 mg
Reporting group description: Subjects were administered BIIB067 20 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection.	
Reporting group title	Part B-MAD: Cohort 6: BIIB067 40 mg
Reporting group description: Subjects were administered BIIB067 40 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection after the safety and PK review of Cohort 5.	
Reporting group title	Part B-MAD: Cohort 7: BIIB067 60 mg
Reporting group description: Subjects were administered BIIB067 60 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection after the safety, PK review and superoxide dismutase 1 (SOD1) PD review of Cohort 6.	
Reporting group title	Part B-MAD: Cohort 8: BIIB067 100 mg
Reporting group description: Subjects were administered BIIB067 100 mg, 3 loading doses once every 2 weeks on Days 1, 15, 29 and 2 maintenance doses once every 4 weeks on Days 57 and 85 by intrathecal injection after the safety, PK review and SOD1 PD review of Cohort 7.	
Reporting group title	Part C-Pivotal: Placebo
Reporting group description: Subjects were administered BIIB067-matching placebo, 3 loading doses administered once every 2 weeks on Days 1, 15, 29 followed by 5 maintenance doses administered once every 4 weeks on Days 57, 85, 113, 141, 169 up to 24 weeks by intrathecal bolus injection.	
Reporting group title	Part C-Pivotal: BIIB067 100 mg
Reporting group description: Subjects were administered BIIB067 100 mg, 3 loading doses administered once every 2 weeks on Days 1, 15, 29 followed by 5 maintenance doses administered once every 4 weeks on Days 57, 85, 113, 141, 169 up to 24 weeks by intrathecal bolus injection.

End point title	Parts A and B: Number of Subjects Experiencing Adverse Events (AEs) and Serious Adverse Events (SAEs) ^{[1][2]}
-----------------	---

End point description:

An AE is any untoward medical occurrence in a subject or clinical investigation subject administered a pharmaceutical product and that does not necessarily have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal (investigational) product, whether or not related to the medicinal (investigational) product. A SAE is any untoward medical occurrence that at any dose results in death, life-threatening event, requires inpatient hospitalization, significant disability/incapacity or congenital anomaly. Safety population included all randomized subjects who received at least 1 dose or a part of 1 dose of study treatment (BIIB067 or placebo) in Part A or B.

Primary: Part C: Change From Baseline in Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R) Total Score at Week 28

End point title	Part C: Change From Baseline in Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R) Total Score at Week 28 ^[27]
-----------------	---

End point description:

The ALSFRS-R measures 4 functional domains, including respiratory, bulbar function, gross motor skills, and fine motor skills. There are 12 questions, each scored from 0 (no function) to 4 (full function), for a total possible score of 48. Scores decline with disease progression. ALSFRS-R scores calculated at diagnosis can be compared to scores throughout time to determine the speed of progression. Higher scores represent better function, negative change from baseline indicates disease progression. mITT population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment.

End point type	Primary

Statistical analyses

Statistical analysis title	Part C-Pivotal: Placebo vs BIIB067 100 mg
----------------------------	---

Statistical analysis description:

Multiple imputation was used to handle missing data for withdrawals. Joint rank test combining function and mortality were used for statistical inference and the estimates were from the ANCOVA for change from baseline.

Comparison groups	Part C-Pivotal: Placebo v Part C-Pivotal: BIIB067 100 mg
Number of subjects included in analysis	60
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.3233 ^[33]
Method	Joint rank
Parameter estimate	LS mean difference
Point estimate	7.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	-3.528
upper limit	19.322
Variability estimate	Standard error of the mean
Dispersion value	5.829

Notes:

[33] - Joint rank p-value was calculated from ANCOVA model which included treatment as fixed effect, adjusts for covariates: Baseline disease duration since symptom onset, baseline ALSFRS-R total score, and use of riluzole or edaravone.

Secondary: Part C: Change From Baseline in Handheld Dynamometry (HHD) Megascor as Measured by the HHD Device at Week 28

End point title	Part C: Change From Baseline in Handheld Dynamometry (HHD) Megascor as Measured by the HHD Device at Week 28 ^[34]
-----------------	--

End point description:

Quantitative muscle strength was evaluated using HHD, which tests isometric strength of multiple muscles using standard subject positioning. Sixteen muscle groups were evaluated in both upper and lower extremities. Strength determinations were converted to Z scores and averaged to provide an HHD megascore. The muscle strength values were normalized to Z scores as (post-baseline measurements – mean)/SD and averaged to provide HHD overall megascore. The overall megascore was created by averaging all eight bilateral measurement Z scores, if no more than 10 (≤ 10) measures are missing. A negative change from baseline indicated decreased muscle strength. mITT population included all subjects who met the prognostic enrichment criteria for rapid disease progression in Part C who were randomized and received at least 1 dose of study treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 28 (Day 197)

Notes:

[34] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was analysed only for the Part C arms of the study, so data was reported only for the Part C arm groups.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 October 2016	Added the review of PK data and clarified the review of safety data prior to each dose escalation in Part B (MAD portion) of the study <ul style="list-style-type: none">• Added the MMSE as part of the neurological examination• Other major changes were made to the study eligibility criteria for Part A (SAD) to allow only those subjects with ALS caused by a SOD1 mutation to enter the study.
17 November 2016	Corrected to reflect in the protocol that sampling for anti-BIIB067 antibodies was occurred during non-dosing clinical visits (except for predose on Day 1).
29 November 2017	Added an 8th treatment cohort to assess the safety and tolerability of up to 5 doses of BIB067 100 mg, and to include the option of an interim analysis during Part B (MAD portion) of the study. <ul style="list-style-type: none">• Other major changes were made to the study stopping rules to clarify that SAEs or AEs determined to be unrelated to study treatment would not trigger dose suspension and to further specify situations that could trigger dose termination.
20 December 2018	Included a third part (Part C [Pivotal]) of approximately 60 subjects (2:1 randomization ratio of BIIB067:placebo) to assess the efficacy, safety, tolerability, PK, and PD of BIIB067 at 100 mg. Part C was to be conducted over a 4-week screening period, 24-week treatment period and 4-week follow-up period. Because the inclusion of Part C also warranted a change in the phase of development of the study, the title of the protocol was changed to accurately reflect study design and objectives and endpoints.
19 September 2019	Described the changes to the primary endpoint and statistical methodology, sample size considerations, and inclusion of an optional interim efficacy analysis for Part C (Pivotal) of the study. <ul style="list-style-type: none">• The primary efficacy endpoint was revised from ALSFRS-R slope to total score (change from baseline to Week 28) and was analyzed via a joint-rank analysis that combines the ALSFRS-R score and survival time. This approach minimized the dependency on linearity assumptions (of the ALSFRS-R slope decline) and enabled a robust mechanism for accounting for missing data due to death.• The sample size for Part C of the study was increased to approximately 99 subjects (increased from up to 60 subjects) based on the following changes – Revised primary efficacy endpoint of change in ALSFRS-R total score from baseline to Day 197/Week 28 analyzed via the joint-rank methodology, two-sided alpha of 0.05 for the primary analysis, revised survival assumptions based on further review of natural history data and data from an interim analysis of Part B of this study (82% survival in the placebo control group and 90% survival in the tofersen group),• Under these assumptions, approximately 60 subjects (increased from 36) were needed in the mITT population (fast progressors) to achieve approximately 84% power. The target sample size for the non-fast progressor population was increased to approximately 39 subjects (increased from 24) to enable adequate power to detect a statistically significant reduction in CSF SOD1 concentrations.• Also, the assumptions for the sample size needed for the population outside the mITT were updated based on the current results from Part B of Study 2015-004098-33.
30 September 2019	Added a provision to collect subject's urine sample for future exploratory research, in all regions where not prohibited by regulatory authorities or ethics committee.
15 June 2021	Updated the final statistical analysis plan for Part C.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
