

Clinical trial results:

A Multicenter, Randomized, Double-blind, Parallel Group, Placebo-controlled Trial of Two Fixed Doses of ZX008 (Fenfluramine Hydrochloride) Oral Solution as an Adjunctive Therapy in Children and Young Adults with Dravet Syndrome

Summary

EudraCT number	2015-004167-37
Trial protocol	GB DE BE NO DK SE ES FR IT
Global end of trial date	29 July 2020

Results information

Result version number	v2 (current)
This version publication date	24 December 2022
First version publication date	10 July 2022
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Alignment with final posting on ClinicalTrials.gov after NIH review.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001990-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 August 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 July 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that ZX008 0.8 mg/kg/day is superior to placebo as adjunctive therapy in the treatment of Dravet syndrome in children and young adults based on change in the frequency of convulsive seizures between Baseline and the combined Titration and Maintenance Periods (T+M).

Protection of trial subjects:

During the conduct of the study all participants were closely monitored.

Background therapy:

Background therapy as permitted in the protocol.

Evidence for comparator:

Not applicable

Actual start date of recruitment	15 January 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	United States: 120
Country: Number of subjects enrolled	Australia: 12
Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Denmark: 10
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Germany: 29
Country: Number of subjects enrolled	Italy: 33
Country: Number of subjects enrolled	Japan: 13
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	United Kingdom: 18
Worldwide total number of subjects	262
EEA total number of subjects	92

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	177
Adolescents (12-17 years)	76
Adults (18-64 years)	9
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study 1501 started to enroll participants in January 2016 and concluded in July 2020. The study 1502 started to enroll participants in July 2016 and concluded in July 2020. The consolidated results of Study 1 and Study 3 are included in this record. The Participant Flow refers to the Randomized Population.

Pre-assignment

Screening details:

Due to slow enrollment into both trials, the databases for the two trials were combined. The first 72 enrolled participants from ZX008-1501 and first 47 from ZX008-1502 were combined for an analysis and reported as Study 1, whereas the final 55 participants from ZX008- 1501 and the final 88 from ZX008-1502 were combined and reported as Study 3.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Study 1: Placebo

Arm description:

Participants received matching placebo as an oral solution, twice a day (bid) in equally divided doses with food for up to approximately 16 weeks. Study 1 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received matching placebo as an oral solution, bid in equally divided doses with food for up to approximately 16 weeks.

Arm title	Study 1: ZX008 0.2 mg/kg/day
------------------	------------------------------

Arm description:

Participants received ZX008 0.2 milligram per kilogram per day (mg/kg/day) as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 1 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Arm type	Experimental
Investigational medicinal product name	Fenfluramine hydrochloride
Investigational medicinal product code	ZX008
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received ZX008 0.2 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks.

Arm title	Study 1: ZX008 0.8 mg/kg/day
------------------	------------------------------

Arm description:

Participants received ZX008 0.8 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 1 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Arm type	Experimental
Investigational medicinal product name	Fenfluramine hydrochloride
Investigational medicinal product code	ZX008
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received ZX008 0.8 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks.

Arm title	Study 3: Placebo
------------------	------------------

Arm description:

Participants received matching placebo as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 3 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received matching placebo as an oral solution, bid in equally divided doses with food for up to approximately 16 weeks.

Arm title	Study 3: ZX008 0.2 mg/kg/day
------------------	------------------------------

Arm description:

Participants received ZX008 0.2 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 3 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Arm type	Experimental
Investigational medicinal product name	Fenfluramine hydrochloride
Investigational medicinal product code	ZX008
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received ZX008 0.2 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks.

Arm title	Study 3: ZX008 0.8 mg/kg/day
------------------	------------------------------

Arm description:

Participants received ZX008 0.8 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 3 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Arm type	Experimental
Investigational medicinal product name	Fenfluramine hydrochloride
Investigational medicinal product code	ZX008
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received ZX008 0.8 mg/kg/day as an oral solution, bid, in equally divided doses with food

for up to approximately 16 weeks.

Primary: Change from Baseline in the mean convulsive seizures frequency (MCSF) to the combined Titration and Maintenance Periods (T+M) in participants receiving ZX008 0.8 mg/kg/day compared to placebo

End point title	Change from Baseline in the mean convulsive seizures frequency (MCSF) to the combined Titration and Maintenance Periods (T+M) in participants receiving ZX008 0.8 mg/kg/day compared to placebo ^[1]
End point description: Monthly (28 day) convulsive seizure frequency (CSF) was based on electronic diary data obtained for each participant. Convulsive seizures included hemiclonic, focal with clear observable motor signs, generalized tonic clonic, secondarily generalized tonic clonic, tonic, clonic, and drop seizures (tonic/atonic). The number of convulsive seizures reported during the entire time interval was divided by the number of nonmissing diary days and the result was then multiplied by 28 to get a 28-day CSF. The modified intent-to-treat (mITT) population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available.	
End point type	Primary
End point timeframe: From Baseline up to 14 weeks [Titration Period (2 weeks) plus Maintenance Period (12 weeks)]	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The ZX008 0.2 mg/kg/day arm which was part of baseline period was not required for the primary endpoint assessment. Therefore, no data was reported for this arm.

End point values	Study 1: Placebo	Study 1: ZX008 0.8 mg/kg/day	Study 3: Placebo	Study 3: ZX008 0.8 mg/kg/day

Secondary: Change from Baseline to Day 99 in the Quality of Life in Childhood Epilepsy (QOLCE) score to measure quality of life in each ZX008 treatment arm compared to placebo

End point title	Change from Baseline to Day 99 in the Quality of Life in Childhood Epilepsy (QOLCE) score to measure quality of life in each ZX008 treatment arm compared to placebo
-----------------	--

End point description:

QOLCE is a low-burden parent/caregiver completed assessment that evaluates how epilepsy affects day-to-day functioning of the participant in various life areas, including physical activities, well being, cognition, social activities, behavior, and general health. QOLCE scores items on 16 subscales with possible 5-point response for each, where scores of 5 was best possible response and 1 was worst possible response. Item scores were then transformed to a 0-100 scale as follows: 1-0, 2-25, 3-50, 4-75, 5-100. A score for each participant for each subscale was calculated by averaging that participant's responses to each item in the subscale. Subscale scores per participant were averaged to obtain an overall QoL score for each participant. Higher the subscale and overall QoL scores, better the response. The mITT population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available.

Secondary: Change from Baseline to Day 99 in the Overall Quality of Life Score from the Pediatric Quality of Life Inventory™ (PedsQL) score in each ZX008 treatment arm compared to placebo

End point title	Change from Baseline to Day 99 in the Overall Quality of Life Score from the Pediatric Quality of Life Inventory™ (PedsQL) score in each ZX008 treatment arm compared to placebo
-----------------	--

End point description:

The Pediatric Quality of Life Inventory (PedsQL) is a pediatric modular measure of health related quality of life (QoL) completed by the parent/caregiver on behalf of the participant. It consisted of 23 items across 4 core scales that measure physical (8 items), emotional, social, and school functioning (5 items each). Each of the responses to the 23 items is initially scored on a 5-point Likert scale from 0 (Never) to 4 (Almost always). Scores are linearly transformed to a scale of 0 to 100, where 0=100, 1=75, 2=50, 3=25 and 4=0, and higher scores correspond to better health-related QoL. The Overall Quality of Life is the average of all the items over the number of items answered on all the Scales. The mITT population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available.

End point title	Quality of life (QoL) of the Parent/Caregiver using the EQ- 5D-5L scale in each ZX008 treatment arm compared to placebo at Baseline (BL) and Day 99 (D99)
-----------------	---

End point description:

The EuroQOL–5 Dimensions–5 Levels scale produced by European QOL Group (EQ-5D-5L) health questionnaire is health-related QOL instrument with 5 dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. The 5 dimensions of EQ-5D-5L health questionnaire were assessed on a Likert scale with 5 possible levels: no problems (NP), slight problems, moderate problems, severe problems, and extreme problems. The categories “slight problems”, “moderate problems”, “severe problems” and “extreme problems” are collapsed into one response category “problems” (Pb). The QOL of the parent/caregiver was assessed and percentage of participants was reported for each item. mITT population was used for analysis. Here, number of participants analyzed included those participants who were evaluable for the assessment and ‘n’ signifies participants who were evaluable at specified time points.

Secondary: Change from Baseline to Day 99 in affective symptoms of the Parent/Caregiver using the Hospital Anxiety and Depression Scale (HADS) in each ZX008 treatment arm compared to placebo

End point title	Change from Baseline to Day 99 in affective symptoms of the Parent/Caregiver using the Hospital Anxiety and Depression Scale (HADS) in each ZX008 treatment arm compared to placebo
-----------------	---

End point description:

The HADS is a tool that was validated to assess presence of anxiety or depression in an outpatient non-psychiatric population. The HADS a 14-item scale that generates ordinal data for 2 dimensions: 1) Anxiety (7 items), and 2) Depression (7 items). Each item has 4 possible answers rated 0 to 3, of which 0 = No distress and 3 = worst distress. All answers to the items for a dimension with their respective rating are added resulting in a range for each dimension from 0-21, out of which of 0-7 = normal; 8-10=borderline abnormal; 11-21=abnormal. Scores for the entire scale (emotional distress) range from 0 to 42, with higher scores indicating more distress. The mITT population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available. Here, number of participants analyzed included those participants who were evaluable for the assessment.

[10] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The descriptive results were planned to be reported for ZX008 arms only, as no PK parameters are collected for Placebo.

End point values	Study 1: ZX008 0.2 mg/kg/day	Study 1: ZX008 0.8 mg/kg/day	Study 3: ZX008 0.2 mg/kg/day	Study 3: ZX008 0.8 mg/kg/day
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	39	36	45	44
Units: hours (h)				
geometric mean (geometric coefficient of variation)	18.4 (± 32.3)	21.1 (± 51.8)	18.1 (± 32.1)	18.6 (± 42.2)

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Titration Period until the Safety Follow-up Visit (up to Day 113)

Adverse event reporting additional description:

A Treatment emergent adverse event (TEAE) was defined as any AE that based on start date information occurred after the first dose of study drug. The safety population included all randomized participants who received at least 1 dose of ZX008 or placebo.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Study 1: Placebo
-----------------------	------------------

Reporting group description:

Participants received matching placebo as an oral solution, twice a day (bid) in equally divided doses with food for up to approximately 16 weeks. Study 1 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Reporting group title	Study 1: ZX008 0.2 mg/kg/day
-----------------------	------------------------------

Reporting group description:

Participants received ZX008 0.2 milligram per kilogram per day (mg/kg/day) as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 1 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Reporting group title	Study 1: ZX008 0.8 mg/kg/day
-----------------------	------------------------------

Reporting group description:

Participants received ZX008 0.8 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 1 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Reporting group title	Study 3: Placebo
-----------------------	------------------

Reporting group description:

Participants received matching placebo as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 3 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Reporting group title	Study 3: ZX008 0.2 mg/kg/day
-----------------------	------------------------------

Reporting group description:

Participants received ZX008 0.2 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 3 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

Reporting group title	Study 3: ZX008 0.8 mg/kg/day
-----------------------	------------------------------

Reporting group description:

Participants received ZX008 0.8 mg/kg/day as an oral solution, bid, in equally divided doses with food for up to approximately 16 weeks. Study 3 is the merged analysis of 2 identical studies (ZX008-1501 and ZX008-1502).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 December 2015	<p>Protocol 1501 Amendment 1: Clarifications and changes were made to the protocol and included the following:</p> <ul style="list-style-type: none">• Sponsor name change• Added new section of transition for subjects who would be entering the open-label extension study• Removed the following clinical laboratory tests at Visits 1 and 6: luteinizing hormone (LH), follicle-stimulating hormone (FSH), estradiol, testosterone, growth hormone (GH), prolactin, and insulin-like growth factor-1 (IGF-1)• Clarified the maximum dose of ZX008 is 30 mg/day• Clarified the collection duration of prior and concomitant antiepileptic drug (AEDs)• Clarified data to be collected with the use of rescue medication• Moved the BRIEF-P description from the efficacy section to the safety section• Added new section of collection of data for AEs requiring hospitalization <p>Additional clarifications and changes were made, based on feedback received from the US Food and Drug Administration (FDA), and included the following:</p> <ul style="list-style-type: none">• Clarified randomization inclusion criteria, post-treatment cardiac follow-up, and adverse event of special interest (AESI) regarding valve regurgitation seen on echocardiogram (ECHO)• Clarified that the central cardiac reader would provide consultation to the Independent Data and Safety Monitoring Committee (IDSMC) when a subject was removed from the study due to development of signs or symptoms indicative of valvulopathy, regurgitation, or pulmonary hypertension• Clarified expedited reporting of cardiac events other than serious adverse events (SAEs)• Added section on grading of and follow-up for ECHO findings.
11 January 2016	<p>Protocol 1502 Amendment 1: Clarifications and changes were made to the protocol and included the following:</p> <ul style="list-style-type: none">• Sponsor name change• Removed the following clinical laboratory tests at Visits 1 and 6: LH, FSH, estradiol, testosterone, GH, prolactin, and IGF-1• Clarified the maximum dose of ZX008 is 30 mg/day• Clarified the collection duration of prior and concomitant AEDs• Clarified data to be collected with the use of rescue medication• Added new section of collection of data for AEs requiring hospitalization• Replaced CHU9D with PedsQL• Updated statistical analysis section, to be consistent with the separate statistical analysis plan• Clarified study duration for participants• Clarified Inclusion Criterion regarding the requirement for a whole blood sample for a broad epilepsy-related gene panel• Added requirement that subjects qualified for and planned to enroll into the separate open-label extension study at the end of this study should be consented prior to Visit 12• Clarified, for all questionnaires and rating scales, when rater substitution was acceptable for the clinic staff and the parent/caregiver <p>Clarifications and changes were made based on feedback received from the US FDA, and included the following:</p> <ul style="list-style-type: none">• Clarified randomization inclusion criteria, post-treatment cardiac follow-up, and AESI regarding valve regurgitation seen on ECHO• Clarified that the central cardiac reader would provide consultation to the IDSMC when a subject was to be removed from the study due to development of signs or symptoms indicative of valvulopathy, regurgitation, or pulmonary hypertension.

11 January 2016	Continuation of Protocol 1502 Amendment 1 • Clarified expedited reporting of cardiac events other than SAEs • Added section on grading of and follow-up for ECHO findings • Added the assessment of cognition for subjects ≥ 5 years of age, so that all study participants were being assessed for cognition using the BRIEF. The description of the BRIEF was moved from the efficacy section to the safety section. Clarifications and changes were made based on feedback received from the European VHP Clinical Trials Group, and included the following: • Updated contraception requirements for the study • Clarified when subjects must have been discontinued from the study • Clarified that the investigator could discontinue a subject from the study in the case of a medical emergency • Added statistical information regarding sensitivity analyses for concomitant AED medication changes during the study.
18 January 2016	Protocol 1501 Amendment 2: Clarifications and changes were made to the protocol and included the following: <ul style="list-style-type: none"> • Replaced Child Health Utility Instrument (CHU9D) with PedsQL • Updated statistical analysis section, to be consistent with the separate statistical analysis plan • Clarified Inclusion Criterion regarding the requirement for a whole blood sample for a broad epilepsy-related gene panel A change was made based on feedback received from the US FDA, and included the following: • Added the assessment of cognition for subjects ≥ 5 years of age, so that all study participants were assessed for cognition using the BRIEF. The description of the BRIEF was moved from the efficacy section to the safety section. Clarifications and changes were made based on feedback received from the European Voluntary Harmonization Procedure (VHP) Clinical Trials Group, and included the following: • Updated contraception requirements for the study • Clarified when subjects must be discontinued from the study • Clarified that the investigator could discontinue a subject from the study in the case of a medical emergency • Added statistical information regarding sensitivity analyses for concomitant AED medication changes during the study.
31 October 2016	Protocol 1501 Amendment 3: Clarifications and changes were made to the protocol and included the following: <ul style="list-style-type: none"> • Removed atonic seizures from and added tonic-atonic to the types of convulsive seizures in Inclusion Criterion • Removal of Inclusion Criterion, to clarify that participation in the epilepsy-related genetic testing was not required at screening for participation • Updated the preclinical data information and, based on this information, revised the list of prohibited concomitant medications • Clarified that the number of convulsive seizures during the 6-week Baseline period is ≥ 6 versus > 6 as originally stated • Added PedsQL Family Impact module to the efficacy measures as intended • Clarified study days of Screening during the Baseline period and the timing of assessments in that period • Collection of blood sample for epilepsy genotype panel was mandatory but not required at screening. Added the list of countries in which Diacomit® (stiripentol) is approved • Added supporting references to existing citations of data • Clarified the safety objective • Specified that the number of study centers was approximate • Clarified the duration of use of contraception after the last dose of study drug • Removal of social media policy from the reason for removing a subject from therapy or assessment.

31 October 2016	<p>Protocol 1502 Amendment 2: Clarifications and changes were made to the protocol and included the following:</p> <ul style="list-style-type: none"> • Removed atonic seizures and added tonic-atonic from the types of convulsive seizures in Inclusion Criterion • Removal of Inclusion Criterion to clarify that participation in the epilepsy-related genetic testing was not required at screening for participation. • Updated the preclinical data information and, based on this information, revised the list of prohibited concomitant medications. • Clarified that the number of convulsive seizures during the 6-week Baseline period was ≥ 6 versus > 6 as originally stated. • Added PedsQL Family Impact module to the efficacy measures as intended • Clarified study days of Screening during the Baseline period and the timing of assessments in that period • Collection of blood sample for epilepsy genotype panel was mandatory but not required at screening. • Added the list of countries in which Diacomit® (stiripentol) is approved • Added supporting references to existing citations of data • Clarified the safety objective • Specified that the number of study centers was approximate. • Clarified the duration of use of contraception after the last dose of study drug. • Removal of social media policy from the reason for removing a subject from therapy or assessment.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This posting consists of pooled analysis (PA) 1 and 2 of ZX008-1501 and ZX008-1502. PA1 is referenced as Study 1 in SAP and CSR. PA2 is referenced as Study 2 in respective SAP and Study 3 in corresponding CSR due to timing of regulatory submissions.

Notes:
