

Clinical trial results:

A Phase I-II, Randomised, Double-Blind, Placebo Controlled, Safety and Tolerability Study of Intermittent Bilateral Intraputamenal Cerebral Dopamine Neurotrophic Factor (CDNF) Infusions Administered via an Investigational Drug Delivery System to Patients with Idiopathic Parkinson's Disease (PD) of Moderate Severity.

Summary

EudraCT number	2015-004175-73
Trial protocol	FI

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 November 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 December 2019
Global end of trial reached?	Yes
Global end of trial date	19 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the safety and tolerability of

- the investigational medicinal product administered as monthly intermittent bilateral intraputamenal CDNF infusions, and,
- the investigational medical device for the intended use and within the intended patient population during device implantation and follow-up, including the test infusion procedure.

To demonstrate the accuracy of investigational device as implantation accuracy to the target site during implantation surgery.

Protection of trial subjects:

The evening before any off-medication assessments, patients were to stay overnight at the clinic or patient-hotel for safety reasons. In some cases the patient was allowed to stay overnight at home without medication, if their caregiver could bring the patient to the clinic the next morning.

Patients were allowed to take their normal anti-Parkinson medication prior to DAT-PET imaging, to prevent them from having painful cramps while in the scanner.

After the first and second treatment dosing, patients were monitored for safety for 24 hours. After any subsequent treatment dosing, patients were advised not to drive or operate machines for 24 hours.

Background therapy:

Patients were allowed to continue to use their anti-Parkinson's medication as prescribed.

Evidence for comparator: -

Actual start date of recruitment	01 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 10
Country: Number of subjects enrolled	Finland: 7
Worldwide total number of subjects	17
EEA total number of subjects	17

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The first patient first visit of the study was in Sweden on 03 October 2017.

The first patient first visit in Finland was on 20 February 2018, after the DSMB recommended to open two more sites for recruitment and surgery in Finland and Sweden.

The last patient recruited in Sweden was on 19 November 2018 and in Finland on 27 February 2019.

Pre-assignment

Screening details:

Altogether 26 patients were screened of which 19 patients were eligible, but two patients withdrew their consent prior to surgery and randomisation. Three patients met some of the psychiatric exclusion criteria, and three other patients had medical conditions making them unsuitable for inclusion. One patient's motor state was not advanced enough.

Period 1

Period 1 title	Screening
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

patients would be randomised after surgery, meeting the post-surgery inclusion criteria and none of the exclusion criteria.

Arms

Arm title	Eligibility screening
-----------	-----------------------

Arm description:

Screening for eligibility to undergo surgery for implantation of drug delivery system.

Arm type	Eligibility screening
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Eligibility screening
Started	17
Completed	17

Period 2

Period 2 title	Surgery, Baseline and Treatment period
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Vehicle
------------------	---------

Arm description:

artificial cerebrospinal fluid is used as the vehicle.

Arm type	Placebo
Investigational medicinal product name	artificial cerebrospinal fluid
Investigational medicinal product code	
Other name	vehicle
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intracerebral use

Dosage and administration details:

4x 480 micro litre was infused intracerebrally via an implanted drug delivery system.

Arm title	CDNF mid-dose
------------------	---------------

Arm description:

CDNF formulated in artificial cerebrospinal fluid to a final concentration of 0.25 mg/mL

Arm type	Experimental
Investigational medicinal product name	CDNF
Investigational medicinal product code	CDNF
Other name	rhCDNF
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intracerebral use

Dosage and administration details:

4x 400 microlitres of CDFN solution for infusion was infusion via an implanted drug delivery system. The IMP was flushed out by infusing 4x 80 micrometers of artificial cerebrospinal fluid at the end of each infusion.

Arm title	CDNF high-dose
------------------	----------------

Arm description:

CDNF formulated in artificial cerebrospinal fluid to a final concentration of 0.75 mg/mL.

Arm type	Experimental
Investigational medicinal product name	CDNF
Investigational medicinal product code	CDNF
Other name	rhCDNF
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intracerebral use

Dosage and administration details:

4x 400 microlitres of CDFN solution for infusion was infusion via an implanted drug delivery system. The IMP was flushed out by infusing 4x 80 micrometers of artificial cerebrospinal fluid at the end of each infusion.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Period 1 is the screening and surgery period. Baseline assessments for the drug are done 1 week before first dosing, ie. approximately 7 weeks after surgical implantation of the drug delivery system.

Number of subjects in period 2	Vehicle	CDNF mid-dose	CDNF high-dose
Started	6	6	5
Completed	5	5	5
Not completed	1	1	0
Adverse event, non-fatal	1	1	-

Timeframe for reporting adverse events:

From surgery (Week -8) to end of study (Week 24).

In addition, a separate analysis was done from surgery (Week -8) to first dosing (Week 0), and from first dosing (Week 0) to end of study (Week 24).

Adverse event reporting additional description:

All adverse events occurring during the study were reported and collected in the eCRF, starting from obtained Informed Consent and until End of Study visit in the study. AEs/ADEs were collected with non-leading questions at each clinic visit, by direct observation of the patient, or by spontaneous reports by the patient.

Assessment type	Non-systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	20.1

Reporting groups

Reporting group title	Vehicle
-----------------------	---------

Reporting group description:

all patients who underwent surgery and were later randomised to the vehicle treatment group.

Reporting group title	CDNF mid-dose
-----------------------	---------------

Reporting group description:

all patients who underwent surgery and were later randomised to the mid-dose CDFN treatment group.

Reporting group title	CDNF high-dose
-----------------------	----------------

Reporting group description:

all patients who underwent surgery and were later randomised to the high-dose CDFN treatment group.

Serious adverse events	Vehicle	CDNF mid-dose	CDNF high-dose
Total subjects affected by serious adverse events			
subjects affected / exposed	1 / 6 (16.67%)	2 / 6 (33.33%)	2 / 5 (40.00%)
number of deaths (all causes)	0	0	0
number of deaths resulting from adverse events	0	0	0
Injury, poisoning and procedural complications			
Radius fracture	Additional description: A month after surgery, prior to treatment start, the patient fell and fractured their radius. The patient underwent surgery to set the fracture. The patient recovered.		
subjects affected / exposed	0 / 6 (0.00%)	1 / 6 (16.67%)	0 / 5 (0.00%)
occurrences causally related to treatment / all	0 / 0	0 / 1	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
General disorders and administration site conditions			
Implant site necrosis	Additional description: Necrosis of the skin around the port site four weeks after surgery, prior to treatment start. The patient underwent skin graft plastic surgery and fully recovered.		

subjects affected / exposed	0 / 6 (0.00%)	0 / 6 (0.00%)	1 / 5 (20.00%)
occurrences causally related to treatment / all	0 / 0	0 / 0	0 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Psychiatric disorders			
Confusional State / disorientation	Additional description: Post-surgery, prior to treatment start, the patients were hospitalised due to disorientation or confusional state. The patients recovered.		
subjects affected / exposed	0 / 6 (0.00%)	1 / 6 (16.67%)	1 / 5 (20.00%)
occurrences causally related to treatment / all	0 / 0	0 / 1	0 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Infections and infestations			
Implant site infection	Additional description: Two weeks after surgery, prior to treatment start, the patient was hospitalised due to suspected infection of the skin around the port site. The patient was treated with antibiotics and fully recovered.		
subjects affected / exposed	0 / 6 (0.00%)	0 / 6 (0.00%)	1 / 5 (20.00%)
occurrences causally related to treatment / all	0 / 0	0 / 0	0 / 1
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Brain abscess	Additional description: The patient was diagnosed with a brain abscess by MRI after receiving several treatment infusions. The infection likely happened during an infusion.		
subjects affected / exposed	1 / 6 (16.67%)	1 / 6 (16.67%)	0 / 5 (0.00%)
occurrences causally related to treatment / all	0 / 1	0 / 1	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Vehicle	CDNF mid-dose	CDNF high-dose
Total subjects affected by non-serious adverse events			
subjects affected / exposed	6 / 6 (100.00%)	6 / 6 (100.00%)	5 / 5 (100.00%)
Vascular disorders			
Aortic dilatation			
subjects affected / exposed	1 / 6 (16.67%)	0 / 6 (0.00%)	0 / 5 (0.00%)
occurrences (all)	1	0	0
Hypertension			
alternative assessment type: Systematic			
subjects affected / exposed	2 / 6 (33.33%)	0 / 6 (0.00%)	0 / 5 (0.00%)
occurrences (all)	2	0	0
Surgical and medical procedures			

Carpal tunnel decompression subjects affected / exposed	1 / 6 (16.67%)	0 / 6 (0.00%)	0 / 5 (0.00%)
occurrences (all)	1	0	0
Dental operation subjects affected / exposed	0 / 6 (0.00%)	1 / 6 (16.67%)	0 / 5 (0.00%)
occurrences (all)	0	1	0

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 September 2017	Eligibility criteria modified to more clearly define inclusion and discontinuation criteria. Plans for treatment after completion of the study - extension study. Recording of infusion pump pressures. Clarification of the timeframe to conduct the post-infusion MRI. Review timepoints of safety lab and imaging scans for safety clarified.
16 February 2018	Deletion of gadolinium test-infusions. Introduction of an optional CT(A) scan.
16 February 2018	Timepoint correction for PET. Neurological examination. Discontinuation criterion clarifying missing of an infusion. Clarification of follow-up data for the DSMB. Clarification of medication recording during surgery. Instructions for LED calculation. Deletion of thrombin time testing.
18 April 2019	Update of risk mitigation section. Port assessment and instructions when an infusion should be postponed. Silicon cap wearing regime changed. Allowance of anti-Parkinson medication prior to PET scanning.
28 August 2019	Additional exploratory analysis - proteomics biomarkers and alpha-synuclein. Study period was extended by 9 months. MRI scans before and after an infusion. Concomitant medication and use of selegiline. UPDRS off-score rating by same rater. Safety laboratory variables. Reporting of device deficiencies.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
