Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 February 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 February 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This trial is designed to evaluate, in adult participants with Type 2 diabetes mellitus and inadequate glycemic control on sub-maximal metformin mono-therapy (1000 mg/day), the effect of up-titration of metformin plus the addition of sitagliptin compared to up-titration of metformin alone on glycemic control. The primary hypothesis of this study is that up-titration of metformin to 2000 mg/day (1000 mg, twice daily [b.i.d]) plus the addition of sitagliptin 100 mg/day provides greater reduction in hemoglobin A1C (A1C) compared to metformin up-titration alone. Another primary objective of this study is to evaluate the safety and tolerability of this treatment.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy:

Metformin is a well-established treatment for individuals with Type 2 diabetes mellitus which has been used in Europe for ~40 years and in the United States since 1995.

Sitagliptin is an orally active and highly-selective dipeptidyl peptidase intravenous (IV) (DPP-4) inhibitor indicated for the treatment of individuals with Type 2 diabetes mellitus.

Evidence for comparator: -

Actual start date of recruitment	16 June 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 53
Country: Number of subjects enrolled	Brazil: 59
Country: Number of subjects enrolled	Canada: 18
Country: Number of subjects enrolled	Czech Republic: 11
Country: Number of subjects enrolled	Guatemala: 73
Country: Number of subjects enrolled	Mexico: 85
Country: Number of subjects enrolled	Russian Federation: 80
Country: Number of subjects enrolled	United States: 79
Worldwide total number of subjects	458
EEA total number of subjects	11

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	365
From 65 to 84 years	91
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

This trial included male and female adult participants with Type 2 diabetes mellitus and inadequate glycemic control on sub-maximal metformin mono-therapy. Additional criteria applied.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Sitagliptin

Arm description:

Participants received sitagliptin 100 mg once daily for 20 weeks. They also received immediate-release metformin (Met-IR), which was titrated from a baseline dose of 1000 mg/day (500 mg/twice a day [b.i.d]) up to 2000 mg/day (1000 mg/b.i.d.) by Day 15. Participants also received glycemic rescue therapy as needed.

Arm type	Experimental
Investigational medicinal product name	Sitagliptin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Sitagliptin 100 mg once a day for 20 weeks.

Investigational medicinal product name	Metformin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Immediate-release metformin (Met-IR) titrated from a baseline dose of 1000 mg/day (500 mg/b.i.d.) up to 2000 mg/day (1000 mg/b.i.d.) by Day 15 and continued at that dose for remainder of treatment period.

Arm title	Placebo
------------------	---------

Arm description:

Participants received placebo matching sitagliptin once daily for 20 weeks. They also received Met-IR, which was titrated from baseline dose of 1000 mg/day (500 mg/b.i.d.) up to 2000 mg/day (1000 mg/b.i.d.) by Day 15. Participants also received glycemic rescue therapy as needed.

Arm type	Placebo
Investigational medicinal product name	Metformin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Immediate-release metformin (Met-IR) titrated from a baseline dose of 1000 mg/day (500 mg/b.i.d.) up to 2000 mg/day (1000 mg/b.i.d.) by Day 15 and continued at that dose for remainder of treatment period.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo to sitagliptin 100 mg once a day for 20 weeks.

Number of subjects in period 1	Sitagliptin	Placebo
Started	229	229
Completed	226	221
Not completed	3	8
Consent withdrawn by subject	2	6
Lost to follow-up	1	2

End point timeframe:

Up to 20 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No between-group statistical comparison was provided for this primary end point because the statistical analysis plan called for between-group comparisons for only those safety endpoints reported by at least 4 participants in one or both treatment groups.
