

**Clinical trial results:****PhaseOut DMD: A Phase 2 Clinical Study to Assess the Activity and Safety of Utrophin Modulation with SMT C1100 in Ambulatory Paediatric Male Subjects with Duchenne Muscular Dystrophy (C11005)****Summary**

EudraCT number	2015-004333-27
Trial protocol	GB
Global end of trial date	11 September 2018

**Results information**

Result version number	v2 (current)
This version publication date	13 June 2019
First version publication date	25 October 2018
Version creation reason	

**Trial information****Trial identification**

Sponsor protocol code	SMT C11005
-----------------------	------------

**Additional study identifiers**

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02858362
WHO universal trial number (UTN)	-

Notes:

**Sponsors**

Sponsor organisation name	Summit (Oxford) Limited
Sponsor organisation address	136a Eastern Avenue, Milton Park, Abingdon, United Kingdom,
Public contact	Clinical Trial Information, Summit (Oxford) Limited, clinicaltrials@summitplc.com
Scientific contact	Clinical Trial Information, Summit (Oxford) Limited, clinicaltrials@summitplc.com

Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 September 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 April 2018
Global end of trial reached?	Yes
Global end of trial date	11 September 2018
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To investigate changes in leg magnetic resonance imaging (MRI)/magnetic resonance spectroscopy (MRS) in paediatric patients with Duchenne Muscular Dystrophy (DMD), following treatment with SMT C1100 (Cohorts 1 and 2).

To investigate the relationships between changes in leg MRI/MRS with plasma concentrations of SMT C1100 and its metabolites in paediatric patients with DMD, following treatment with SMT C1100 (Cohorts 1 and 2).

To assess the safety and tolerability of SMT C1100 and its metabolites in paediatric patients with DMD.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki, The International Council on Harmonisation of technical requirements for pharmaceuticals for human use (ICH) harmonized tripartite guideline regarding Good Clinical Practice (ICH-GCP E6 (R2) Consolidated Guidance, November 2016), all applicable subject privacy requirements and the ethical principles that are outlined in the Declaration of Helsinki (revised version of Fortaleza, Brazil, 2013). This includes but is not limited to: Independent IRB/EC review and approval of study protocol and any subsequent amendments, subject informed consent, and investigator reporting requirements.

Prior to initiation of a study site, the Sponsor obtained approval from the appropriate regulatory agency to conduct the study in accordance with the ICH GCP and applicable country specific regulatory requirements.

The study was conducted in accordance with all applicable regulatory requirements.

The Investigator was to ensure that this protocol was conducted in full conformance with these principles or with the laws and regulations of the locality in which the research was conducted, whichever afforded the greater protection of the individual.

Written informed consent and assent was obtained from each patient (and their parents/guardian) prior to participation in the study. Written informed consent was collected following a review of the patient information leaflet by the potential patient and their parents/guardian and a discussion between the subject and their parents/guardian and the Investigator or suitably qualified designee.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 June 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Ethical reason
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	United Kingdom: 21
Country: Number of subjects enrolled	United States: 22
Worldwide total number of subjects	43
EEA total number of subjects	21

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	41
Adolescents (12-17 years)	2
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Cohort 1 was conducted in the United Kingdom (UK) and the United States (US). Cohort 2 was conducted in the US. Cohort 3 was conducted in the UK.

### Pre-assignment

Screening details:

40 male patients aged between 5 and 10 years, with a diagnosis of Duchenne Muscular Dystrophy (confirmed by phenotypic and genetic evidence) were enrolled in either Cohort 1 or Cohort 2. An additional 3 patients were enrolled to Cohort 3 who had previously received SMT C1100 in other studies, but were not eligible for Cohorts 1 or 2 in this study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1: Microfluidised Oral Suspension F3

Arm description:

Patients were to receive 2.5 g of SMT C1100 microfluidised aqueous oral suspension formulation (F3) twice-daily (BID) for at least 48 weeks.

Arm type	Experimental
Investigational medicinal product name	SMT C1100
Investigational medicinal product code	Ezutromid
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Patients were to receive 2.5 g of SMT C1100 microfluidised aqueous suspension formulation (F3) BID for at least 48 weeks.

<b>Arm title</b>	Cohort 2: Powder for Oral Suspension F6
------------------	-----------------------------------------

Arm description:

Patients were to receive 1 g of SMT C1100 as a powder for oral suspension (F6) BID for at least 48 weeks.

Arm type	Experimental
Investigational medicinal product name	SMT C1100
Investigational medicinal product code	Ezutromid
Other name	
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Patients were to receive 1 g of SMT C1100 as a powder for oral suspension (F6) BID for at least 48 weeks.

<b>Arm title</b>	Cohort 3: Microfluidised Oral Suspension F3
------------------	---------------------------------------------

Arm description:

Patients were to receive 2.5 g of SMT C1100 microfluidised aqueous oral suspension formulation (F3) twice-daily (BID) for at least 48 weeks. All 3 patients in Cohort 3 discontinued from the study prior to Week 24 due to premature study termination.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	SMT C1100
Investigational medicinal product code	Ezutromid
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Patients were to receive 2.5 g of SMT C1100 microfluidised aqueous suspension formulation (F3) BID for at least 48 weeks.

Number of subjects in period 1	Cohort 1: Microfluidised Oral Suspension F3	Cohort 2: Powder for Oral Suspension F6	Cohort 3: Microfluidised Oral Suspension F3

## End points

### End points reporting groups

Reporting group title	Cohort 1: Microfluidised Oral Suspension F3
Reporting group description: Patients were to receive 2.5 g of SMT C1100 microfluidised aqueous oral suspension formulation (F3) twice-daily (BID) for at least 48 weeks.	
Reporting group title	Cohort 2: Powder for Oral Suspension F6
Reporting group description: Patients were to receive 1 g of SMT C1100 as a powder for oral suspension (F6) BID for at least 48 weeks.	
Reporting group title	Cohort 3: Microfluidised Oral Suspension F3
Reporting group description: Patients were to receive 2.5 g of SMT C1100 microfluidised aqueous oral suspension formulation (F3) twice-daily (BID) for at least 48 weeks. All 3 patients in Cohort 3 discontinued from the study prior to Week 24 due to premature study termination.	
Subject analysis set title	All Patients
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1, Cohort 2 and Cohort 3.	
Subject analysis set title	Baseline (MRS FF Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Baseline for MRS FF vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 12 Change from Baseline (MRS FF Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 12 for MRS FF vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 24 Change from Baseline (MRS FF Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 24 for MRS FF vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 36 Change from Baseline (MRS FF Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 36 for MRS FF vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 48 Change from Baseline (MRS FF Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 48 for MRS FF vastus lateralis leg muscle parameter.	
Subject analysis set title	Baseline (MRS FF Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Baseline for MRS FF soleus leg muscle parameter.	
Subject analysis set title	Week 12 Change from Baseline (MRS FF Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 12 for MRS FF soleus leg muscle parameter.	

Subject analysis set title	Week 24 Change from Baseline (MRS FF Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 24 for MRS FF soleus leg muscle parameter.	
Subject analysis set title	Week 36 Change from Baseline (MRS FF Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 36 for MRS FF soleus leg muscle parameter.	
Subject analysis set title	Week 48 Change from Baseline (MRS FF Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 48 for MRS FF soleus leg muscle parameter.	
Subject analysis set title	Baseline (MRS WTRT Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Baseline for MRS WTRT vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 12 Change from Baseline (MRS WTRT Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 12 for MRS WTRT vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 24 Change from Baseline (MRS WTRT Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to week 24 for MRS WTRT vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 36 Change from Baseline (MRS WTRT Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 36 for MRS WTRT vastus lateralis leg muscle parameter.	
Subject analysis set title	Week 48 Change from Baseline (MRS WTRT Vastus Lateralis)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 48 for MRS WTRT vastus lateralis leg muscle parameter.	
Subject analysis set title	Baseline (MRS WTRT Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Baseline for MRS WTRT soleus leg muscle parameter.	
Subject analysis set title	Week 12 Change from Baseline (MRS WTRT Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 12 for MRS WTRT soleus leg muscle parameter.	
Subject analysis set title	Week 24 Change from Baseline (MRS WTRT Soleus)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 24 for MRS WTRT soleus leg muscle parameter.	
Subject analysis set title	Week 36 Change from Baseline (MRS WTRT Soleus)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Inclusive of Cohort 1 and Cohort 2. Change from baseline to Week 36 for MRS WTRT soleus leg muscle parameter.

## Secondary: Number of Patients Meeting Specific Levels of Changes from Baseline for Electrocardiogram (ECG) Parameters

End point title	Number of Patients Meeting Specific Levels of Changes from Baseline for Electrocardiogram (ECG) Parameters
-----------------	------------------------------------------------------------------------------------------------------------

End point description:

Summary includes data from Cohorts 1 and 2. ECG results included PR interval (PR), heart rate (HR), and heart rate corrected QT interval using Fridericia's formula (QTcF). Cohort 3 patients were a different study population (i.e. different eligibility criteria), and as only limited data was available, their data has been excluded. All three Cohort 3 patients had post-baseline measurements recorded, of which 1 had an increase in HR  $\geq 20\%$  recorded and another had both an increase and decrease in HR  $\geq 20\%$  recorded (means of replicates were all  $< 20\%$  different to baseline).

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

The condition of each patient was monitored throughout the study. All TEAEs to the end of the study are presented. Treatment related events are those considered as at least possibly related to study treatment.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	19.0

### Reporting groups

Reporting group title	All Patients
-----------------------	--------------

Reporting group description: -

Serious adverse events	All Patients		
Total subjects affected by serious adverse events			
subjects affected / exposed	4 / 43 (9.30%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Injury, poisoning and procedural complications			
Spinal compression fracture			
subjects affected / exposed	1 / 43 (2.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Femur fracture			
subjects affected / exposed	1 / 43 (2.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
General disorders and administration site conditions			
Non-cardiac chest pain			
subjects affected / exposed	1 / 43 (2.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Peripheral swelling			

subjects affected / exposed	1 / 43 (2.33%)

subjects affected / exposed	4 / 43 (9.30%)		
occurrences (all)	6		
Viral upper respiratory tract infection			
subjects affected / exposed	2 / 43 (4.65%)		
occurrences (all)	2		
Gastroenteritis viral			
subjects affected / exposed	1 / 43 (2.33%)		
occurrences (all)	1		
Conjunctivitis			
subjects affected / exposed	1 / 43 (2.33%)		
occurrences (all)	1		
Adenovirus infection			
subjects affected / exposed	1 / 43 (2.33%)		
occurrences (all)	1		

Oral candidiasis subjects affected / exposed occurrences (all)	1 / 43 (2.33%) 1		
Metabolism and nutrition disorders			
Decreased appetite subjects affected / exposed occurrences (all)	3 / 43 (6.98%) 3		
Increased appetite subjects affected / exposed occurrences (all)	2 / 43 (4.65%) 3		
Overweight subjects affected / exposed occurrences (all)	1 / 43 (2.33%) 1		
Vitamin D deficiency subjects affected / exposed occurrences (all)	2 / 43 (4.65%) 2		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 December 2015	Amendment 1 (dated 08 December 2015) added additional information on potential interactions of ezutromid with the Cytochrome P-450 pathway, particularly CYP2B6, and introduced the prohibition of taking medications known to be Cytochrome P450 inhibitors, inducers, and substrates during the study.
24 February 2016	Amendment 2 (dated 24 February 2016) resolved minor administrative issues identified after the finalization of the protocol. These issues did not impact the conduct of the study.
07 October 2016	Amendment 3 (dated 07 October 2016) added Cohort 2 (10 subjects) to study a microfluidized aqueous oral suspension at a dose of 1000 mg twice daily. Cohort 2 subjects were only enrolled at US sites. The number of subjects in the original cohort was correspondingly reduced from 40 to 30. The amendment also provided additional information on Summit Study ezutromid, in which the suspension formulation was previously tested, and made various minor administrative changes.
24 February 2017	Amendment 4 (24 February 2017) added Cohort 3 (15 subjects), which consisted of patients who had previously received ezutromid and were not eligible for Cohorts 1 or 2. These patients entered a safety arm and underwent additional cardiac MRI scans and pulmonary function tests. Cohort 3 patients were only enrolled at UK sites. The amendment also added the Extension Phase into the study design. All patients were eligible to continue into the Extension Phase. The amendment also made various minor administrative changes.
