EU Clinical Trials Register

Clinical trial results:
A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Active Comparator, Parallel-Group Study of the Efficacy and Safety of Lemborexant in Subjects 55 Years and Older with Insomnia Disorder

Summary

EudraCT number	2015-004347-39
Trial protocol	GB DE ES IT
Global end of trial date	30 January 2018

Results information

Result version number	v2 (current)
This version publication date	04 January 2025
First version publication date	15 February 2019
Version creation reason

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 November 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 January 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate using polysomnography (PSG) that lemborexant (lemborexant 10 milligram [mg] [LEM 10] and lemborexant 5 mg [LEM 5]) is superior to placebo (PBO) on objective sleep onset as assessed by latency to persisted sleep (LPS) after the last 2 nights of 1 month of treatment in subjects 55 years and older with insomnia disorder.

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following: - Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008) - International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use - Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312 - European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states. - Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 71
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	United States: 843
Country: Number of subjects enrolled	Canada: 20
Country: Number of subjects enrolled	Germany: 68
Country: Number of subjects enrolled	Italy: 2
Worldwide total number of subjects	1006
EEA total number of subjects	141

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	553
From 65 to 84 years	449
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 67 investigative sites in the United States, Spain, Germany, Canada, United Kingdom, and Italy from 31 May 2016 to 30 January 2018.

Pre-assignment

Screening details:

A total of 3537 subjects were screened, of which 1006 subjects were randomized to the treatment period. All subjects who were subsequently randomized completed a Run-in Period before randomization to treatment period.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received lemborexant-matched placebo and zolpidem matched placebo, tablets, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Arm type	Placebo
Investigational medicinal product name	Zolpidem-matched Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received zolpidem-matched placebo, tablets, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Investigational medicinal product name	Lemborexant-matched Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received lemborexant-matched placebo, tablets, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Arm title	Zolpidem Tartrate Extended Release 6.25 mg

Arm description:

Subjects received zolpidem tartrate extended release (ZOL ER) 6.25 mg and lemborexant-matched placebo, tablets, orally, once daily from Day 1 up to Day 30 in the Treatment period.

Arm type	Active comparator
Investigational medicinal product name	Zolpidem Tartrate Extended Release
Investigational medicinal product code	
Other name	Ambien CR
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received zolpidem tartrate extended release 6.25 mg, tablet, orally, once daily from Day 1 up to Day 30 in the Treatment period.

Investigational medicinal product name	Lemborexant-matched Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received lemborexant-matched placebo, tablet, orally, once daily from Day 1 up to Day 30 in the Treatment period.

Arm title	Lemborexant 5 mg

Arm description:

Subjects received Lemborexant 5 mg and zolpidem-matched placebo, tablets, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Arm type	Experimental
Investigational medicinal product name	Lemborexant 5 mg
Investigational medicinal product code	E2006
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received lemborexant 5 mg, tablet, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Investigational medicinal product name	Zolpidem-matched Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received zolpidem-matched placebo, tablet, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Arm title	Lemborexant 10 mg

Arm description:

Subjects received lemborexant 10 mg and zolpidem-matched placebo, tablets, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Arm type	Experimental
Investigational medicinal product name	Lemborexant 10 mg
Investigational medicinal product code	E2006
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received lemborexant 10 mg, tablet, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Investigational medicinal product name	Zolpidem-matched Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received zolpidem-matched placebo, tablet, orally, once daily from Day 1 up to Day 30 in the Treatment Period.

Number of subjects in period 1	Placebo	Zolpidem Tartrate Extended Release 6.25 mg	Lemborexant 5 mg
Started	208	263	266

Sleep Efficiency (SE)			
The baseline values for SE were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.			
Units: minutes			
arithmetic mean	68.89	68.13	68.36
standard deviation	± 9.639	± 11.419	± 11.268
LPS			
The baseline values for LPS were analysed in the full analysis set (FAS) defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.			
Units: minutes			
arithmetic mean	43.89	44.52	44.86
standard deviation	± 33.596	± 38.349	± 36.528
Wake After Sleep Onset (WASO)			
The baseline values for WASO were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.			
Units: minutes			
arithmetic mean	111.75	114.31	113.44
standard deviation	± 37.179	± 39.992	± 38.953
Wake After Sleep Onset in Second Half of Night (WASO2H)			
The baseline values for WASO2H were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.			
Units: minutes			
arithmetic mean	74.44	78.04	76.60
standard deviation	± 30.109	± 33.849	± 32.903
Subjective Sleep Onset Latency (sSOL)			
The baseline values for sSol were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 206, 258, 263, and 269.			
Units: minutes			
arithmetic mean	55.90	60.54	65.79
standard deviation	± 37.389	± 36.350	± 43.530
Total Sleep Time (TST)			
The baseline values for TST were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.			
Units: minutes			
arithmetic mean	330.67	326.99	328.00
standard deviation	± 46.268	± 54.852	± 54.224
Body Sway			
The baseline values for body sway were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 199, 239, 245, and 243.			
Units: one-third degree of angle of arc			
arithmetic mean	23.08	26.96	26.40
standard deviation	± 17.506	± 26.502	± 20.781
Subjective Total Sleep Time (sTST)			

The baseline values for sTST were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 201, 247, 253, and 258.

Units: minutes			
arithmetic mean	276.23	273.07	275.74
standard deviation	± 87.649	± 81.207	± 83.650

Insomnia Severity Index (ISI)			

The baseline values for ISI were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 263, 266, and 269.

Units: score in scale			
arithmetic mean	11.21	11.06	10.91
standard deviation	± 2.436	± 2.508	± 2.419

Fatigue Severity Scale (FSS)			

The baseline values for FSS were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 263, 266, and 269.

Units: score on scale			
arithmetic mean	37.48	37.15	37.47
standard deviation	± 13.602	± 13.788	± 13.518

Subjective Sleep Efficiency (sSE)			

The baseline values for sSE were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 201, 247, 253, and 258.

Units: minutes			
arithmetic mean	56.08	55.49	56.05
standard deviation	± 17.343	± 15.802	± 17.094

Subjective Wake After Sleep Onset (sWASO)			

The baseline values for sWASO were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 206, 259, 264, and 266.

Units: minutes			
arithmetic mean	170.89	173.06	166.76
standard deviation	± 80.676	± 77.212	± 82.047

Power of Attention (POA)			

The baseline values for POA were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 195, 239, 249, and 246.

Units: millisecond			
arithmetic mean	1421.0	1418.7	1452.9
standard deviation	± 210.27	± 195.95	± 263.04

Speed of Memory Retrieval (SOMT)			

The baseline values for SOMT were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 195, 238, 246, and 246.

Units: milliseconds			
arithmetic mean	4507.7	4513.8	4674.3
standard deviation	± 1098.73	± 1097.65	± 1174.74

Quality of Memory (QOM)			

The baseline values for QOM were analysed in the FAS defined as the group of randomized subjects who

received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 195, 239, 248, and 246.

Units: units on scale			
arithmetic mean	342.2	350.0	345.7
standard deviation	± 66.03	± 65.30	± 67.60
Continuity of Attention (COA)			

The baseline values for COA were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 195, 239, 249, and 246.

Units: units on scale			
arithmetic mean	90.7	90.6	91.0
standard deviation	± 4.77	± 6.0	± 5.15

arithmetic mean	67.85		
standard deviation	± 10.849	-	
LPS			

The baseline values for LPS were analysed in the full analysis set (FAS) defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose

primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.

Units: minutes			
arithmetic mean	44.61		
standard deviation	± 32.986	-	

Wake After Sleep Onset (WASO)			

The baseline values for WASO were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.

Units: minutes			
arithmetic mean	114.83		
standard deviation	± 39.997	-	

Wake After Sleep Onset in Second Half of Night (WASO2H)			

The baseline values for WASO2H were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.

Units: minutes			
arithmetic mean	76.88		
standard deviation	± 32.126	-	

Subjective Sleep Onset Latency (sSOL)			

The baseline values for sSol were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 206, 258, 263, and 269.

Units: minutes			
arithmetic mean	60.88		
standard deviation	± 42.514	-	

Total Sleep Time (TST)			

The baseline values for TST were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 262, 266, and 269.

Units: minutes			
arithmetic mean	325.07		
standard deviation	± 52.819	-	

Body Sway			

The baseline values for body sway were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 199, 239, 245, and 243.

Units: one-third degree of angle of arc			
arithmetic mean	36.29		
standard deviation	± 197.282	-	

Subjective Total Sleep Time (sTST)			

The baseline values for sTST were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 201, 247, 253, and 258.

Units: minutes			
arithmetic mean	266.10		
standard deviation	± 92.164	-	

Insomnia Severity Index (ISI)			

The baseline values for ISI were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 263, 266,

and 269.			
Units: score in scale			
arithmetic mean	10.84		
standard deviation	± 2.334	-	
Fatigue Severity Scale (FSS)			
The baseline values for FSS were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 208, 263, 266, and 269.			
Units: score on scale			
arithmetic mean	37.42		
standard deviation	± 13.111	-	
Subjective Sleep Efficiency (sSE)			
The baseline values for sSE were analysed in the FAS defined as the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The baseline characteristic was assessed for the following "n" population: 201, 247, 253, and 258.			
Units: minutes			
arithmetic mean	54.31		
standard deviation	± 18.318	-

End point title	Change From Baseline in Mean LPS of Lemborexant 10 mg and Lemborexant 5 mg Compared to Placebo on Days 29/30[1]
End point description:	
LPS is defined as the time in minutes from lights off to the first epoch of 20 consecutive epochs of non-wakefulness as measured by PSG. Change from baseline to average LPS on Day 29 and 30 was reported. FAS was the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement at given time points.	
End point type	Primary
End point timeframe:	
Baseline, Days 29/30	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The endpoint was only planned to be analyse for the following reporting groups: Placebo, Lemborexant 5 mg, and Lemborexant 10 mg.

End point values	Placebo	Lemborexant 5 mg	Lemborexant 10 mg	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	200	260	260	
Units: minutes				
arithmetic mean (standard deviation)	-7.93 (± 31.946)	-19.53 (± 33.054)	-21.46 (± 32.436)

Other pre-specified: Change from Baseline in Mean Body Sway upon Awakening in the Morning for Lemborexant 5 mg and Lemborexant 10 mg Compared to Zolpidem ER on Days 2/3

End point title	Change from Baseline in Mean Body Sway upon Awakening in the Morning for Lemborexant 5 mg and Lemborexant 10 mg Compared to Zolpidem ER on Days 2/3[26]

End point description:

Body sway is detected through a cable around the subject's waist by the ataxia meter. Body sway is measured in units of 1/3° of the angle of arc. For ease in reporting, these are called arbitrary units, with a higher number indicating more body sway (less postural stability). Change from baseline in mean body sway on Days 2 and 3 was reported. The FAS was the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement at given time points.

End point type	Other pre-specified

End point timeframe:

Baseline, Days 2/3

Notes:

[26] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint was only planned to be analyse for the following reporting groups: Zolpidem ER 6.25 mg, Lemborexant 5 mg, and Lemborexant 10 mg.

Notes:

[28] - Based on MMRM model with factors of age group, region, treatment, visit (Days 2/3), and treatment-by-visit interaction as fixed effect, and the baseline posture stability of body sway as a covariate.

Other pre-specified: Change From Baseline in sSOL, sWASO, sSE, and sTST of Lemborexant 10 mg and Lemborexant 5 mg Compared to Zolpidem ER

End point title	Change From Baseline in sSOL, sWASO, sSE, and sTST of Lemborexant 10 mg and Lemborexant 5 mg Compared to Zolpidem ER[29]

End point description:

sSOL: estimated minutes from time attempted to sleep to sleep onset. sWASO: estimated minutes of wake at night after initial sleep onset to time stopped trying to sleep for the night. sSE: percentage of sTST per subjective time spent in bed (time attempted to sleep to time stopped trying to sleep for the night, and time spent asleep derived from subjective time spent in bed minus sWASO). sTST: minutes of sleep from sleep onset to time stopped trying to sleep for the night. sSOL, sSE, sWASO, sTST were analyzed with diary handling rules (DHR) on an electronic sleep diary. Subjective measures were derived from sleep diaries entries, collected daily and analyzed at appropriate intervals. FAS: group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. "n": subjects who were evaluable for outcome measure at given time points.

End point type	Other pre-specified

End point timeframe:

First 7 nights (approximately Week 1) and Last 7 nights (approximately Week 4)

Notes:

[29] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint was only planned to be analyse for the following reporting groups: Zolpidem ER 6.25 mg, Lemborexant 5 mg, and Lemborexant 10 mg.

Notes:

[60] - Based on MMRM model with factors of age group, region, treatment, visit (Days 29/30), and treatment-by-visit interaction as fixed effect, and the baseline TST as a covariate.

Statistical analysis title	WASO2H: Placebo, Lemborexant 10 mg
Comparison groups	Placebo v Lemborexant 10 mg

Number of subjects included in analysis	460
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 [61]
Method	MMRM
Parameter estimate	LSM Difference
Point estimate	-17.76
Confidence interval	
level	95 %
sides	2-sided
lower limit	-22.57
upper limit	-12.96
Variability estimate	Standard error of the mean
Dispersion value	2.451

Notes:

[61] - Based on MMRM model with factors of age group, region, treatment, visit (Days 29/30), and treatment-by-visit interaction as fixed effect, and the baseline WASO2H as a covariate.

Other pre-specified: Change From Baseline in Mean sSOL, sWASO, sSE, and sTST of Lemborexant 10 mg and Lemborexant 5 mg Compared to Placebo

End point title	Change From Baseline in Mean sSOL, sWASO, sSE, and sTST of Lemborexant 10 mg and Lemborexant 5 mg Compared to Placebo[62]

End point description:

sSOL: estimated minutes from time attempted to sleep to sleep onset. sWASO: estimated minutes of wake at night after initial sleep onset to time stopped trying to sleep for the night. sSE: percentage of sTST per subjective time spent in bed (time attempted to sleep to time stopped trying to sleep for the night, and time spent asleep derived from subjective time spent in bed minus sWASO). sTST: minutes of sleep from sleep onset to time stopped trying to sleep for the night. sSOL, sSE, sWASO, sTST were analyzed with diary handling rules (DHR) on an electronic sleep diary. Subjective measures were derived from sleep diaries entries, collected daily and analyzed at appropriate intervals. FAS: group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. "n": subjects who were evaluable for outcome measure at given time points.

End point type	Other pre-specified

End point timeframe:

First 7 nights (approximately Week 1) and Last 7 nights (approximately Week 4)

Notes:

[62] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint was only planned to be analyse for the following reporting groups: Placebo, Lemborexant 5 mg, and Lemborexant 10 mg.

Other pre-specified: Change From Baseline in Score From Items 4 to 7 on the ISI of Lemborexant 10 mg and Lemborexant 5 mg Compared to Zolpidem ER and Placebo on Day 31

End point title	Change From Baseline in Score From Items 4 to 7 on the ISI of Lemborexant 10 mg and Lemborexant 5 mg Compared to Zolpidem ER and Placebo on Day 31

End point description:

The ISI is a 7-item self-report questionnaire assessing the nature, severity, and impact of insomnia. The dimensions evaluated were: severity of sleep onset; sleep maintenance; early morning awakening problems; sleep dissatisfaction; interference test sleep difficulties with daytime functioning; noticeability of the sleep problems by others; and distress caused by the sleep difficulties. A 5-point Likert scale was used to rate each item (from 0 = no problem to 4 = very severe problem) yielding a total score from 0 to 28. The FAS was the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement at given time points.

Other pre-specified: Change From Baseline in FSS Score of Lemborexant 10 mg and

Lemborexant 5 mg Compared to Zolpidem ER and Placebo on Day 31

End point title	Change From Baseline in FSS Score of Lemborexant 10 mg and Lemborexant 5 mg Compared to Zolpidem ER and Placebo on Day 31

End point description:

The FSS is a self-report scale on which subjects are instructed to choose a number from 1 to 7 that indicates their degree of agreement with each of 9 statements about their fatigue where "1" indicates strongly disagree, and "7" indicates strongly agree. The FSS total score was the sum of all responses to the 9 questions. The FSS average item score was the average of the score for each item. Higher total scores and higher average item scores indicated greater fatigue. The FAS was the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. The FAS was the group of subjects where data was available at given time points.

Other pre-specified: Change From Baseline in Mean POA and SOMT on Days 2/3

End point title	Change From Baseline in Mean POA and SOMT on Days 2/3

End point description:

POA reflects the ability to focus attention and process information. POA is calculated from the sum of simple reaction time, choice reaction time and digit vigilance. SOMT reflects time taken to retrieve information from working and episodic memory. SOMT is a composite score created by combining numerical working memory and spatial working memory and word recognition and picture recognition. Cognitive performance assessment was done by a computerized performance assessment battery (PAB) which was administered on a laptop computer. A positive change from baseline reflects impairment and a lower value of decrease from baseline indicates better performance. Change from baseline to average POA and SOMT on Days 2 and 3 was reported. The FAS was the group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose primary efficacy measurement. Here "n" were subjects who were evaluable for the outcome measure at given time points.

level	95 %
sides	2-sided
lower limit	-33.5
upper limit	12.86
Variability estimate	Standard error of the mean
Dispersion value	11.813

Notes:

[126] - Based on MMRM model with factors of age group, region, treatment, visit (Days 2/3), and treatment-by-visit interaction as fixed effect, and the baseline POA as a covariate.

Other pre-specified: Change From Baseline in Mean QOM and COA on Days 2/3

End point title	Change From Baseline in Mean QOM and COA on Days 2/3

End point description:

QOM: ability to store information in memory and subsequently retrieve it. It is a composite score created by combining accuracy measures from 2 sets of working memory and 4 sets of episodic memory. 2 sets of working memory were included: numerical and spatial working memory, and ranges from -2 to 2. 4 sets of episodic memory were included: immediate and delayed word recall, and word and picture recognition, and ranges from -200 to 400. COA is ability to sustain attention. Number of correct responses (out of 50) for choice reaction time was added to total number of targets correctly identified (out of 45) digit vigilance minus number of false alarms (total score of -45 to 95). Higher values were better. Change from baseline to average QOM and COA on Days 2 and 3 was reported. FAS: group of randomized subjects who received at least 1 dose of randomized study drug and had at least 1 postdose efficacy measurement. "n": subjects who were evaluable for outcome measure at given time points.

End point type	Other pre-specified

End point timeframe:

Baseline, Days 2/3

Adverse events

Adverse events information

Timeframe for reporting adverse events:	
Run-in Phase (Day -7) up to End of treatment (Day 44)	
Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	20.1

Reporting groups

Reporting group title	Zolpidem tartrate

Reporting group description:

Subjects received ZOL ER 6.25 mg and LEM-matched PBO, tablets, orally, once on each night for 30 consecutive nights, immediately before the time the subject intended to try to sleep of treatment period.

Reporting group title	Placebo

Reporting group description:

Subjects received LEM-matched PBO and ZOL ER-matched PBO, tablets, orally once on each night for 30 consecutive nights, immediately before the time the subject intended to try to sleep of treatment period.

Reporting group title	Lemborexant 10 mg

Reporting group description:

Subjects received LEM 10 mg (LEM 10) and ZOL ER-matched PBO, tablets, orally, once on each night for 30 consecutive nights, immediately before the time the subject intended to try to sleep of treatment period.

Reporting group title	Lemborexant 5 mg

Reporting group description:

Subjects received LEM 5 and ZOL ER -matched PBO, tablets, orally, once on each night for 30 consecutive nights, immediately before the time the subject intended to try to sleep of treatment period.

Reporting group title	Run -in Period Placebo

Reporting group description:

Subjects received LEM-matched PBO and ZOL ER-matched PBO, tablets, orally, once on each night for 7 consecutive nights up to Baseline (Day 1), immediately before the time the subject intended to try to sleep of run-in period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 June 2016	Amendment 01: The protocol was amended to update that exclusion criteria include current diagnosis of obstructive sleep apnea, prohibition of strong CYP3A inhibitors from being used any time during study, even if intermittently, added sleep onset latency as a PSG variable and moved analysis of cognitive PAB tasks from exploratory to secondary analyses.
16 February 2017	Amendment 02: The protocol was amended to update screening period from up to -28 days to up to -35 days, inclusion and exclusion criteria, requirement for monitoring of seizures and falls and T-BWSQ assessment description such that scores above 20 will not be considered clinically significant and that the symptoms will no longer be summarized separately from all other AEs.
16 June 2017	Amendment 03: The protocol was amended to update WASO1H as a sleep architecture parameter (efficacy) and age groups for analysis.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

 None reported
