

Clinical trial results:

An Open Label Study to Characterize the Incidence and Severity of Diarrhea in Patients with Early Stage HER2+ Breast Cancer Treated with Neratinib and Intensive Loperamide Prophylaxis

Summary

EudraCT number	2015-004374-15
Trial protocol	ES AT
Global end of trial date	22 April 2021

Results information

Result version number	v1 (current)
This version publication date	28 April 2022
First version publication date	28 April 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 June 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 April 2021
Global end of trial reached?	Yes
Global end of trial date	22 April 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To characterize the incidence and severity of diarrhea in patients with early stage HER2 overexpressed/amplified (HER2+) breast cancer treated with neratinib when administered with intensive loperamide prophylaxis, after prior treatment with trastuzumab.

Protection of trial subjects:

Study commencement required prior written approval of a properly constituted Institutional Review Board (IRB) or Independent Ethics Committee (IEC). Clinical trial data were monitored at regular intervals by the Sponsor or their representative throughout the study to verify compliance to study protocol, completeness, accuracy and consistency of the data and adherence to local regulations on the conduct of clinical research. Patients were discontinued from investigational product(s) (IP) in the following circumstances: disease recurrence (as determined by the Investigator), death, unacceptable toxicity, or other specified withdrawal criterion.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 February 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Austria: 4
Country: Number of subjects enrolled	Spain: 25
Country: Number of subjects enrolled	Australia: 86
Country: Number of subjects enrolled	Canada: 27
Country: Number of subjects enrolled	United States: 413
Worldwide total number of subjects	563
EEA total number of subjects	37

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	487
From 65 to 84 years	75
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

The institutional review board/independent ethics committee must review and approve the protocol and informed consent form (ICF) before any subjects provide consent.

Pre-assignment

Screening details:

Each subject must participate in the informed consent process and sign and date an Informed Consent Form (ICF) for this protocol before any protocol-required procedures are performed.

Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Loperamide

Arm description:

Patients in the Loperamide Arm were enrolled under the original protocol as well as patients enrolled under amendments 1 and 2.

Patients enrolled under Original Protocol received mandatory low dose loperamide prophylaxis for 2 cycles + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Patients enrolled under Amendment 1 or 2 received mandatory high dose loperamide prophylaxis for 2 cycles + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Arm type	Experimental
Investigational medicinal product name	loperamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

For patients enrolled under the Original Protocol:

Initial dose of 4 mg (2 tablets/capsules) with the first dose of neratinib, followed by 2 mg (1 tablet/capsule) every 4 hours for the first 3 days.

After the first 3 days, loperamide 2 mg every 6 to 8 hours through the first 2 cycles of therapy (56 days) from start of neratinib.

For patients enrolled under Amendment 1 and Amendment 2:

For the first 14 days, loperamide 4 mg (2 tablets/capsules) will be self-administered orally by patients 3 times a day (total 12 mg a day). The initial dose of loperamide 4 mg will be self-administered orally with the first dose of neratinib.

After the first 14 days, loperamide 4 mg (2 tablets/capsules) will be self-administered orally twice a day (total 8 mg a day) through the first 2 cycles of therapy (Day 56) from start of neratinib dosing.

Investigational medicinal product name	neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Neratinib (240 mg; provided as six 40-mg tablets) will be self-administered orally by patients on a daily

basis, starting with Cycle 1/Day 1. Neratinib must be taken with food, preferably in the morning; however, neratinib may be taken in the evening. Neratinib will be given continuously for one year (364 days) in thirteen (13) 28-day cycles, with no rest between cycles.

Arm title	Budesonide
------------------	------------

Arm description:

Patients enrolled in the Budesonide Arm (under Amendment 3) received mandatory high dose loperamide prophylaxis for two (2) cycles + budesonide for one (1) cycle + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Arm type	Experimental
Investigational medicinal product name	neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Neratinib (240 mg; provided as six 40-mg tablets) will be self-administered orally by patients on a daily basis, starting with Cycle 1/Day 1. Neratinib must be taken with food, preferably in the morning; however, neratinib may be taken in the evening. Neratinib will be given continuously for one year (364 days) in thirteen (13) 28-day cycles, with no rest between cycles.

Investigational medicinal product name	loperamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

For the first 14 days, loperamide 4 mg (2 tablets/capsules) will be self-administered orally by patients 3 times a day (total 12 mg a day). The initial dose of loperamide 4 mg will be self-administered orally with the first dose of neratinib.

After the first 14 days, loperamide 4 mg (2 tablets/capsules) will be self-administered orally twice a day (total 8 mg a day) through the first 2 cycles of therapy (Day 56) from start of neratinib dosing.

Investigational medicinal product name	budesonide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

For patients enrolled under Amendment 3 and who participate in the initial cohort that will evaluate budesonide, patients will self-administer oral budesonide at a dose of 9 mg once daily with or without food, for the first treatment cycle (28 days), to be taken with neratinib and intensive loperamide prophylaxis.

Arm title	Colestipol
------------------	------------

Arm description:

Patients enrolled in the Colestipol Arm (under amendment 4) received mandatory high dose loperamide prophylaxis + colestipol for one (1) cycle + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Arm type	Experimental
Investigational medicinal product name	neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Neratinib (240 mg; provided as six 40-mg tablets) will be self-administered orally by patients on a daily

basis, starting with Cycle 1/Day 1. Neratinib must be taken with food, preferably in the morning; however, neratinib may be taken in the evening. Neratinib will be given continuously for one year (364 days) in thirteen (13) 28-day cycles, with no rest between cycles.

Investigational medicinal product name	loperamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

For the first 14 days, the initial dose of loperamide 4 mg will be self-administered orally with the first dose of neratinib, followed by loperamide 4 mg (2 tablets/capsules) self-administered orally by patients 3 times a day (total 12 mg a day).

After the first 14 days, loperamide 4 mg (2 tablets/capsules) will be self-administered orally twice a day (total 8 mg a day), for 1 cycle [28 days], and then as needed (PRN) (not to exceed 16 mg per day).

Investigational medicinal product name	colestipol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

For patients who participate in the evaluation of colestipol, patients will self-administer colestipol at a dose of 2 g twice daily for the first treatment cycle, to be taken at least 2 hours after, but at least 4 hours before, neratinib and intensive loperamide prophylaxis.

Arm title	Colestipol + Loperamide PRN
------------------	-----------------------------

Arm description:

Patients enrolled in the Colestipol + Loperamide PRN Arm (under amendment 5) received loperamide as needed + colestipol for 1 cycle + neratinib 240 mg/day all 13 cycles.

Arm type	Experimental
Investigational medicinal product name	neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Neratinib (240 mg; provided as six 40-mg tablets) will be self-administered orally by patients on a daily basis, starting with Cycle 1/Day 1. Neratinib must be taken with food, preferably in the morning; however, neratinib may be taken in the evening. Neratinib will be given continuously for one year (364 days) in thirteen (13) 28-day cycles, with no rest between cycles.

Investigational medicinal product name	loperamide PRN
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Loperamide 4 mg (2 tablets/capsules) will be self-administered orally by patients on a PRN (as needed) basis, from the start of neratinib dosing with a goal of titrating to 1-2 bowel movements a day (not to exceed 16 mg per day).

Investigational medicinal product name	colestipol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

For patients who participate in the evaluation of colestipol, patients will self-administer colestipol at a dose of 2 g twice daily for the first treatment cycle, to be taken at least 2 hours after, but at least 4

hours before, neratinib and loperamide.

Arm title	Neratinib Dose Escalation
------------------	---------------------------

Arm description:

Patients enrolled in the Neratinib Dose Escalation Arm (under Amendments 6 and 6.1) received 120 mg neratinib daily for Week 1 (C1D1 – C1D7), followed by 160 mg neratinib daily for Week 2 (C1D8 – C1D14), followed by 240 mg neratinib daily starting at Week 3 and thereafter (C1D15 to EOT). Loperamide was administered on an as-needed basis only.

Arm type	Experimental
Investigational medicinal product name	loperamide PRN
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Loperamide 4 mg (2 tablets/capsules) will be self-administered orally by patients on a PRN (as needed) basis, from the start of neratinib dosing with a goal of titrating to 1-2 bowel movements a day (not to exceed 16 mg per day).

Investigational medicinal product name	neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients enrolled under Amendment 6 and Amendment 6.1 will receive neratinib at a starting dose of 120 mg/day with dose escalation (ie, total dose 120 mg daily for Week 1, 160 mg daily for the Week 2, and 240 mg daily for Week 3 and thereafter, until End of Treatment, up to 364 days).

Arm title	Neratinib Dose Escalation Scheme 2
------------------	------------------------------------

Arm description:

Patients enrolled in the Neratinib Dose Escalation Scheme 2 Arm (under Amendments 7 and 7.1) received 160 mg neratinib daily for Weeks 1 and 2 (C1D1 – C1D14), followed by 200 mg neratinib daily for Weeks 3 and 4 (C1D15 – C1D28), followed by 240 mg neratinib daily starting at Week 5 and thereafter (C2D1 to EOT). Loperamide was administered on an as-needed basis only.

Arm type	Experimental
Investigational medicinal product name	loperamide PRN
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Loperamide 4 mg (2 tablets/capsules) will be self-administered orally by patients on a PRN (as needed) basis, from the start of neratinib dosing with a goal of titrating to 1-2 bowel movements a day (not to exceed 16 mg per day).

Investigational medicinal product name	neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients enrolled starting with Amendment 7 will receive neratinib 160 mg neratinib for the first 2 weeks (Cycle 1, Day 1 through – Cycle 1 Day 14), followed by 200 mg neratinib for the next 2 weeks (Cycle 1 Day 15 through Cycle 1 Day 28), followed by 240 mg neratinib thereafter (Cycle 2 Day 1 to End of

Treatment, up to 364 days). Daily dosing should continue until a criterion for treatment withdrawal is met.

Baseline characteristics

Reporting groups

Reporting group title	Loperamide
-----------------------	------------

Reporting group description:

Patients in the Loperamide Arm were enrolled under the original protocol as well as patients enrolled under amendments 1 and 2.

Patients enrolled under Original Protocol received mandatory low dose loperamide prophylaxis for 2 cycles + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Patients enrolled under Amendment 1 or 2 received mandatory high dose loperamide prophylaxis for 2 cycles + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Reporting group title	Budesonide
-----------------------	------------

Reporting group description:

Patients enrolled in the Budesonide Arm (under Amendment 3) received mandatory high dose loperamide prophylaxis for two (2) cycles + budesonide for one (1) cycle + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Reporting group title	Colestipol
-----------------------	------------

Reporting group description:

Patients enrolled in the Colestipol Arm (under amendment 4) received mandatory high dose loperamide prophylaxis + colestipol for one (1) cycle + neratinib 240 mg/day for all thirteen (13) 28-day cycles.

Reporting group title	Colestipol + Loperamide PRN
-----------------------	-----------------------------

Reporting group description:

Patients enrolled in the Colestipol + Loperamide PRN Arm (under amendment 5) received loperamide as needed + colestipol for 1 cycle + neratinib 240 mg/day all 13 cycles.

Reporting group title	Neratinib Dose Escalation
-----------------------	---------------------------

Reporting group description:

Patients enrolled in the Neratinib Dose Escalation Arm (under Amendments 6 and 6.1) received 120 mg neratinib daily for Week 1 (C1D1 – C1D7), followed by 160 mg neratinib daily for Week 2 (C1D8 – C1D14), followed by 240 mg neratinib daily starting at Week 3 and thereafter (C1D15 to EOT). Loperamide was administered on an as-needed basis only.

Reporting group title	Neratinib Dose Escalation Scheme 2
-----------------------	------------------------------------

Reporting group description:

Patients enrolled in the Neratinib Dose Escalation Scheme 2 Arm (under Amendments 7 and 7.1) received 160 mg neratinib daily for Weeks 1 and 2 (C1D1 – C1D14), followed by 200 mg neratinib daily for Weeks 3 and 4 (C1D15 – C1D28), followed by 240 mg neratinib daily starting at Week 5 and thereafter (C2D1 to EOT). Loperamide was administered on an as-needed basis only.

Loperamide was administered on an as-needed basis only.	

Primary: Percentage of Patients with Grade 3 or Higher Diarrhoea

End point title	Percentage of Patients with Grade 3 or Higher Diarrhoea ^[1]
End point description:	
The primary objective of this study is to characterize the percentage of patients with Grade 3 or higher diarrhoea in patients with early-stage HER2 overexpressed/amplified (HER2+) breast cancer treated with neratinib when administered with intensive loperamide prophylaxis, after prior treatment with trastuzumab. Grade 3: Increase of ≥ 7 stools per day over baseline; incontinence; hospitalization indicated; severe increase in ostomy output compared to baseline; limiting self care ADL. Grade 4: Life-threatening consequences; urgent intervention indicated. Grade 5: Death.	
End point type	Primary
End point timeframe:	
From first dose through 28 days after last dose, up to 15.5 months.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal comparisons between treatment groups were specified by the protocol.

Secondary: Percentage of Patients With Serious Adverse Events and Other Adverse Events of Special Interest

End point title	Percentage of Patients With Serious Adverse Events and Other Adverse Events of Special Interest
-----------------	---

End point description:

Assess the percentage of patients with serious adverse events (SAEs) and other adverse events of special interest (AESI). AESIs were selected based on the known safety profile of neratinib as well as typical key body system toxicity concerns generally reviewed for any new drug. These AESIs were grouped into the following categories: gastrointestinal toxicity (diarrhea and stomatitis), hepatotoxicity, pulmonary toxicity (interstitial lung disease), cardiac toxicity (LVEF decreased), and dermatologic toxicity (rash and nail disorders). The AESIs were analyzed by searching the clinical database for all TEAEs and SAEs using either Standardized MedDRA Queries (SMQs) or, if an applicable SMQ did not exist, a Sponsor-defined list of MedDRA Preferred Terms.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 May 2015	Amendment 1 changed the loperamide dosing schedule to regular daytime intervals of three times a day, with the intent of improving patient compliance.
06 November 2015	Amendment 2 added patient reported outcomes to the data collection performed. The number of assessments of left ventricular ejection fraction (LVEF) with ECHO or MUGA evaluations was also decreased from 6 to 2 (Screening Visit and End of Treatment Visit), based on echocardiogram results from study 3144A2-3004-WW, A Randomized, Double-Blind, Placebo-Controlled Trial of Neratinib (HKI-272) after Trastuzumab in Women with Early-Stage HER-2/neu Overexpressed/Amplified Breast Cancer, showing no LVEF change from baseline to Month 12. Patients enrolled under the Original Protocol, Amendment 1, and Amendment 2 comprised the Loperamide (L) cohort.
24 March 2016	Amendment 3 added anti-inflammatory treatment to neratinib and loperamide prophylaxis. Budesonide XR 9 mg tablets administered once daily for 1 cycle was added to the 2 cycles of loperamide prophylaxis during neratinib therapy. Two additional anti-inflammatory medication cohorts, mesalamine and bismuth subsalicylate, were also added by Amendment 3, but these cohorts were subsequently terminated in Amendment 5 without enrollment (new information was reviewed by the Sponsor, in addition to the availability of results from recent sets of preclinical data which were discussed with external expert consultants, which indicated that the bile acid sequestrant colestipol would be more effective in mitigating diarrhea than either bismuth subsalicylate or mesalamine). Patients enrolled under Amendment 3 comprised the Budesonide+Loperamide (BL) cohort.
19 August 2016	Amendment 4 added colestipol (a bile acid sequestrant), using a regimen of two 1 g tablets administered twice daily to neratinib and intensive loperamide prophylaxis for 1 cycle based on the results of preclinical rat model studies, which suggested the possible implication of bile acid malabsorption. Patients enrolled under Amendment 4 comprised the Colestipol+Loperamide (CL) cohort.
19 September 2017	Amendment 5 used the same colestipol treatment regimen as Amendment 4, but loperamide was to be taken on a PRN basis only. Patients enrolled under Amendment 5 comprised the Colestipol+Loperamide PRN (CL-PRN) cohort.
26 October 2017	Amendment 6 introduced a design to evaluate the effects of a more gradual neratinib titration regimen (ie, 120 mg daily from C1D1-C1D7, to 160 mg daily from C1D8-C1D14, then 240 mg daily on C1D15 thereafter) on the incidence of severe diarrhea. Amendment 6.1 (30-APR-2018) added another patient reported outcome to the data collection. Patients enrolled under Amendment 6 and 6.1 comprised the Dose Escalation (DE) cohort.
08 October 2018	Amendment 7 was designed to investigate the effect of a second dose escalation scheme on the incidence and severity of diarrhea. Patients in this cohort were started at 160 mg daily neratinib for the first 2 weeks of treatment followed by 200 mg daily neratinib for the subsequent 2 weeks of dosing, then reaching the full 240 mg daily dose of neratinib from Cycle 2 onwards. An inclusion criteria requirement was also added by this amendment to require documented hormone receptor (HR)-positive disease, defined as estrogen receptor (ER) positive and/or progesterone receptor (PR) positive disease; however, this requirement was later removed for North America and Australia in regional Amendment 7.1 (25-JUL-2019). Patients enrolled under Amendment 7 and 7.1 comprised the Dose Escalation 2 (DE2) cohort.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
23 March 2020	The study indefinitely paused screening and enrollment of new patients on 23-Mar-2020 in response to the global COVID-19 pandemic. In September 2020, enrollment was formally closed due to the study having achieved its scientific objective. There were sufficient data to analyze the primary endpoint of the study and other key variables. All remaining active ongoing patients continued to receive per protocol treatment and care according to study protocol, and relevant country and/or institutional COVID-19 pandemic guidelines.	-

Notes:

Limitations and caveats

None reported
