

Clinical trial results:

A Phase IIa, Double-Blind, Mechanistic Study of GSK3196165 in Combination with Methotrexate Therapy in Subjects with Active Rheumatoid Arthritis Despite Treatment with DMARDs

Summary

EudraCT number	2015-004386-91
Trial protocol	DE PL
Global end of trial date	30 October 2017

Results information

Result version number	v1 (current)
This version publication date	13 November 2018
First version publication date	13 November 2018

Trial information

Trial identification

Sponsor protocol code	205180
-----------------------	--------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Sponsors

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom,
Public contact	GSK Response Center, GlaxoSmithKline, 1 8664357343,
Scientific contact	GSK Response Center, GlaxoSmithKline, 1 8664357343,

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 January 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 October 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objectives of this study are to explore the activity of Granulocyte-macrophage colony-stimulating factor (GM-CSF) signaling pathway characterized by exploratory biomarkers in participants with rheumatoid arthritis, the impact of GSK3196165 therapy, and whether there are any differences in this GM-CSF signaling pathway between participants with early RA or established RA.

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 June 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 32
Country: Number of subjects enrolled	Poland: 6
Country: Number of subjects enrolled	Germany: 1
Worldwide total number of subjects	39
EEA total number of subjects	7

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	30
From 65 to 84 years	9

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

A total of 39 participants with active early/established Rheumatoid arthritis were randomized across 9 centers in 3 countries from 15 June 2016 to 30 October 2017.

Pre-assignment

Screening details:

Out of the 88 participants screened for this study, 49 participants were screen failures and 39 participants were randomized and received treatment in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Eligible participants received matching placebo subcutaneously (SC) into thigh or abdomen once weekly for 5 weeks, and then every other week until Week 10. In addition to placebo, participants also received methotrexate (MTX) 7.5–25 mg/week and folic (or folinic) acid ≥ 5 mg/week during the combination treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Sterile 0.9% weight by volume (w/v) sodium chloride solution to be administered as subcutaneous injection into thigh or abdomen once weekly for 5 weeks

Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Tablet
Routes of administration	Subcutaneous use, Oral use

Dosage and administration details:

Tablet or liquid administered orally or subcutaneously

Investigational medicinal product name	Folic acid or folinic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Tablet, Oral liquid
Routes of administration	Oral use

Dosage and administration details:

Capsule, tablet or liquid taken orally

Arm title	GSK3196165 180 mg
------------------	-------------------

Arm description:

Eligible participants received GSK3196165 180 milligrams (mg) SC into thigh or abdomen once weekly for 5 weeks, and then every other week until Week 10. In addition to GSK3196165, participants also

received MTX 7.5–5 mg/week and folic (or folinic) acid ≥ 5 mg/week during the combination treatment period.

Arm type	Experimental
Investigational medicinal product name	GSK3196165
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

GSK3196165 is available as sterile solution to be administered as subcutaneous injection into thigh or abdomen once weekly for 5 weeks.

Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Tablet
Routes of administration	Subcutaneous use, Oral use

Dosage and administration details:

Tablet or liquid administered orally or subcutaneously.

Investigational medicinal product name	Folic acid or folinic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule, Oral liquid
Routes of administration	Oral use

Dosage and administration details:

Capsule, table or liquid taken orally

Number of subjects in period 1	Placebo	GSK3196165 180 mg
Started	11	28
Completed	7	23
Not completed	4	5
Consent withdrawn by subject	2	4
Lost to follow-up	-	1
Lack of efficacy	2	-

In addition to GSK3196165, participants also received MTX 7.5–5 mg/week and folic (or folinic) acid ≥ 5 mg/week during the combination treatment period.	

Primary: Change from Baseline in Target Engagement biomarkers- soluble Granulocyte-macrophage colony-stimulating factor (GM-CSF) complexed to GSK3196165

End point title	Change from Baseline in Target Engagement biomarkers- soluble Granulocyte-macrophage colony-stimulating factor (GM-CSF) complexed to GSK3196165
End point description:	
Blood samples were collected for markers which may influence rheumatoid arthritis. Target engagement biomarkers included soluble GM-CSF complexed to GSK3196165. Baseline was defined at Day 1. Change from Baseline was calculated as ratio of Baseline value to post-dose value. Analysis was performed using repeated measures analysis adjusted for GM-CSF - Complex log(Baseline value), treatment group, disease duration (≤ 2 or > 2 years), visit and treatment group by visit interaction. Analysis was performed on Intent-to-Treat (ITT) Population which consisted of all participants who were randomized to treatment and who received at least one dose of study treatment. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).	
End point type	Primary
End point timeframe:	
Baseline and Weeks 1, 2, 4, 6, 8, 12, 12-Week follow-up (FU) (Week 22)	

End point values	Placebo	GSK3196165 180 mg

End point description:	
Blood samples were collected and analyzed for markers which may be predictive of rheumatoid arthritis disease activity. Predictive biomarkers included analysis of Chemokine (C-C Motif) Ligand 17 (CL17), Chemokine (C-X-C Motif) Ligand 13 (CL13), Interleukin 6, Macrophage-Derived Chemokine (MDC). Baseline was defined at Day 1. Change from Baseline was calculated as ratio of Baseline value to post-dose value. Analysis was performed using repeated measures analysis adjusted for CL17, CL13, Interleukin 6, MDC log(Baseline value), treatment group, disease duration (<=2 or >2 years), visit and treatment group by visit interaction. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles). Data has been presented for only those time points at which the samples were collected.

Primary: Change from Baseline in Cartilage Biomarkers

End point title	Change from Baseline in Cartilage Biomarkers
End point description:	
<p>Blood samples were collected and analyzed for markers that may be predictive of rheumatoid arthritis disease activity. Cartilage biomarkers included analysis of ARGS Neo-Epitope, Citrullinated MMP-Degraded Vimentin (CMDV), MMP-Degraded C Reactive Protein (CRP), MMP-Degraded Type I Collagen (MD1C), MMP-Degraded Type II Collagen (MD2C), MMP-Degraded Type III Collagen (MD3C). Baseline was defined at Day 1. Change from Baseline was calculated as ratio of Baseline value to post-dose value. Analysis was performed using repeated measures analysis adjusted for ARGS Neo-Epitope, Citrullinated MMP-Degraded Vimentin, MMP-Degraded CRP, MMP-Degraded Type I Collagen, MMP-Degraded Type II Collagen and MMP-Degraded Type III Collagen log(Baseline value), treatment group, disease duration (<=2 or >2 years), visit and treatment group by visit interaction. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).</p>	
End point type	Primary

Primary: Change from Baseline in Flow Cytometry: T Reg Cell Foxp3: CD3+CD4+CD25+CD127-, CD3+CD4+foxP3+CD25+CD127-

End point title	Change from Baseline in Flow Cytometry: T Reg Cell Foxp3: CD3+CD4+CD25+CD127-, CD3+CD4+foxP3+CD25+CD127-
-----------------	--

End point description:

Whole blood samples were collected and analyzed for markers which may be predictive of rheumatoid arthritis disease activity. Flow cytometry assessment included assessment of CD3+CD4+CD25+CD127- and CD3+CD4+foxP3+CD25+CD127-. Baseline was defined at Day 1. Change from Baseline was calculated by subtracting the post-dose value from the Baseline value. Analysis was performed using repeated measures analysis adjusted for CD3+CD4+CD25+CD127- and CD3+CD4+foxP3+CD25+CD127-Number of Cells (10^6 cells/L) log(Baseline value), treatment group, disease duration (≤ 2 or > 2 years), visit and treatment group by visit interaction. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

Primary: Change from Baseline in Flow Cytometry: CD16+ Monocyte Panel: CD14-HLA-DR+CD11cbr+CD123-, CD14br+CD16+, CD14br+CD16-, CD14lo+CD16br+

End point title	Change from Baseline in Flow Cytometry: CD16+ Monocyte Panel: CD14-HLA-DR+CD11cbr+CD123-, CD14br+CD16+, CD14br+CD16-, CD14lo+CD16br+
End point description:	
Whole blood samples were collected and analyzed for markers which may be predictive of rheumatoid arthritis disease activity. Flow cytometry assessment included assessment of CD14-HLA-DR+CD11cbr+CD123-, CD14br+CD16+, CD14br+CD16- and CD14lo+CD16br+. Baseline was defined at Day 1. Change from Baseline was calculated by subtracting the post-dose value from the Baseline value. Analysis was performed using repeated measures analysis adjusted for CD14-HLA-DR+CD11cbr+CD123-, CD14br+CD16+, CD14br+CD16- and CD14lo+CD16br+ (10 ³ /Liter) baseline value, treatment group, disease duration (<=2 or >2 years), visit and treatment group by visit interaction. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

Secondary: Change from Baseline in synovitis as assessed by Outcome Measures in Rheumatology (OMERACT) rheumatoid arthritis magnetic resonance imaging scoring system (RAMRIS) in the most affected hand/wrist

End point title	Change from Baseline in synovitis as assessed by Outcome Measures in Rheumatology (OMERACT) rheumatoid arthritis magnetic resonance imaging scoring system (RAMRIS) in the most affected hand/wrist
-----------------	---

End point description:

For synovitis a total of 8 joints were evaluated. Individual joint scores range from 0-3, where 0= normal, 1=mild, 2=moderate and 3=severe. The final synovitis score is the sum of the individual joint scores. Total score range from 0 (best) to 24 (worst). If an individual location is scored either 'Not Visible' or 'Surgically Modified' then the score for that location was set to missing. Missing joint scores was imputed as the mean of the non-missing joint scores. Baseline was defined at Day 1. Change from Baseline was calculated by subtracting the post-dose value from the Baseline value. Repeated measures analysis adjusted for synovitis score baseline value, treatment group, disease duration (≤ 2 or > 2 years), visit and treatment group by visit interaction. Data has been presented for Median and 95% credible interval. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

Secondary: Change from Baseline in osteitis as assessed by OMERACT RAMRI scoring system in the most affected hand/wrist

End point title	Change from Baseline in osteitis as assessed by OMERACT RAMRI scoring system in the most affected hand/wrist
-----------------	--

End point description:

For bone edema/osteitis a total of 25 locations was evaluated. Individual location scores ranged from 0-3, where, 0: no edema; 1: 1-33% of bone edematous; 2: 34-66% of bone edematous; 3: 67-100% of bone edematous. Final bone edema/osteitis score is sum of individual location scores. Total score ranged from 0 (best) to 75 (worst). Baseline was defined at Day 1. Change from Baseline was calculated by subtracting post-dose value from Baseline value. If an individual location was scored either 'Not Visible' or 'Surgically Modified' or 'Not Assessable' then the score for that location was set to be missing. Missing joint scores was imputed as mean of non-missing location scores. Repeated measures analysis adjusted for Bone Edema/Osteitis Score baseline value, treatment group, disease duration (<=2 or >2 years), visit and treatment group by visit interaction. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

End point type	Secondary

Secondary: Change from Baseline in erosion as assessed by OMERACT RAMRI scoring system in the most affected hand/wrist

End point title	Change from Baseline in erosion as assessed by OMERACT RAMRI scoring system in the most affected hand/wrist
-----------------	---

End point description:

For bone erosion a total of 25 locations were evaluated. Individual location scores range from 0-10, where, 0: no erosion; 1: 1-10% of bone eroded and 10: 91-100% of bone eroded. The final bone erosion score is the sum of the individual location scores. The total score ranged from 0 (best) to 250 (worst). If an individual location was scored either 'Not Visible' or 'Surgically Modified' or 'Not Assessable' then the score for that location was set to be missing. Missing joint scores was imputed as the mean of the non-missing location scores. Baseline was defined at Day 1. Change from Baseline was calculated by subtracting the post-dose value from the Baseline value. Analysis was performed using repeated measures analysis adjusted for Bone Erosion Score baseline value, treatment group, disease duration (≤ 2 or > 2 years), visit and treatment group. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

Secondary: Change from Baseline in synovitis as assessed by rheumatoid arthritis MRI quantitative (RAMRIQ) assessment in the most affected hand/wrist

End point title	Change from Baseline in synovitis as assessed by rheumatoid arthritis MRI quantitative (RAMRIQ) assessment in the most affected hand/wrist
-----------------	--

End point description:

RAMRIQ is an automated volume quantification assessment. RAMRIQ assessed same pathologies and joints (except metacarpophalangeal joint [MCP1]) as RAMRIS allowing for direct comparison of results obtained using the two methods. Bones were automatically identified in pre-contrast, coronal T1 images using active appearance modelling (AAMs). Joint capsules and soft tissues were also segmented with AAMs, providing consistent 3D regions of interest (ROI) for synovial enhancement across all time points. Synovial volume was calculated as voxels that enhance within each ROI. Baseline was defined at Day 1. Change from Baseline was calculated by subtracting the post-dose value from the Baseline value. Repeated measures analysis adjusted for Synovitis baseline value, treatment group, disease duration (≤ 2 or > 2 years), visit and treatment group by visit interaction. Only those participants with data available at the specified data points were analyzed (represented by $n = X$ in the category titles).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 March 2016	This amendment includes classification of primary and secondary objectives and endpoints in Section 1 and Section 3; extension of the screening window to six weeks in Section 1, Section 4.1, Section 5.3.1, Section 7.1, and Section 7.2; correction of several typographical errors; clarification of likely numbers of participants screened in Section 4.3; correction of >15% relative decrease in DLCO as a trigger point in Section 4.6.1; clarification of DLCO testing in Section 5.1, Section 5.3.2.2, Section 7.1, Section 7.2, and Section 7.6.12; addition of Day 1 joint count and correction of mandatory chest HRCT if DLCO $\geq 60\%$ - <70% predicted in Section 5.1; revision that participants must have passed all screening assessments (including laboratory tests) prior to undertaking MRI scanning, and that whole blood flow cytometry is scheduled on Day 1 in Section 7.1; an additional Exclusion Criterion for MRI in Section 5.2; correction that re-screening is permitted in Section 5.3.1; correction that RNA analysis is not part of the pharmacogenetics substudy in Section 7.1 and Section 7.2; clarification of the RA Symptom and Impact Diary in Section 7.5.2; clarification of PK sample in Section 7.2; clarification of MRI image processing in Section 7.9; clarification of abbreviations in Appendix 12.1; revision of contraception guidance in Appendix 12.2; and clarification of data recording in Appendix 12.7.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
