

Clinical trial results:

A Multicenter, Open-label, Single-dose Study to Evaluate the Pharmacokinetics of Valsartan in Japanese Pediatric Patients 6 to 14 Years of Age

Summary

EudraCT number	2015-004445-10
Trial protocol	Outside EU/EEA
Global end of trial date	08 October 2011

Results information

Result version number	v1 (current)
This version publication date	18 November 2016
First version publication date	18 November 2016

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 October 2011
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	08 October 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to determine the single-dose Pharmacokinetics (PK) of valsartan 20 mg or 40 mg in Japanese pediatric subjects from 6 to 14 years of age.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 August 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 12
Worldwide total number of subjects	12
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	9
Adolescents (12-17 years)	3
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at three centers in Japan.

Pre-assignment

Screening details:

A total of 12 subjects were enrolled and completed the study.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The study was open label study, hence no blinding was performed.

Arms

Are arms mutually exclusive?	Yes
Arm title	Valsartan 20 mg

Arm description:

Subjects with body weight <35 kilograms (kg) were administered with a single dose of valsartan 20 milligram (mg) orally.

Arm type	Experimental
Investigational medicinal product name	Valsartan
Investigational medicinal product code	VAL489
Other name	Diovan
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects with body weight <35 kg were administered with a single dose of valsartan 20 mg orally.

Arm title	Valsartan 40 mg
------------------	-----------------

Arm description:

Subjects with body weight ≥ 35 kg were administered with a single dose of valsartan 40 mg orally.

Arm type	Experimental
Investigational medicinal product name	Valsartan
Investigational medicinal product code	VAL489
Other name	Diovan
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects with body weight ≥ 35 kg were administered with a single dose of valsartan 40 mg orally.

Number of subjects in period 1	Valsartan 20 mg	Valsartan 40 mg
Started	6	6
Completed	6	6

Baseline characteristics

Reporting groups

Reporting group description: Subjects with body weight ≥35 kg were administered with a single dose of valsartan 40 mg orally.	

Primary: Maximum plasma concentration (C_{max}) of Valsartan

End point title	Maximum plasma concentration (C _{max}) of Valsartan ^[1]
End point description: C _{max} was defined as the observed maximum plasma concentration following drug administration [mass / volume]. It was determined using non-compartmental method using WinNonlin Pro (Version 5.2). Plasma concentrations of valsartan were determined using a validated LC-MS/MS method. The lower limit of quantification (LLOQ) of valsartan was 5 nanograms (ng)/millilitre (mL). The analysis was performed in pharmacokinetic analysis set (PAS) population, defined as all dosed subjects with evaluable PK data.	
End point type	Primary
End point timeframe: Pre-dose, 2, 4, 6, 8 and 24 hours (hr) post-dose	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics was planned for this primary end point.

End point values	Valsartan 20 mg	Valsartan 40 mg

Secondary: Number of subjects with Adverse Events (AEs), Serious Adverse Events (SAEs), AEs leading to discontinuation, Drug-Related AEs and who died

End point title	Number of subjects with Adverse Events (AEs), Serious Adverse Events (SAEs), AEs leading to discontinuation, Drug-Related AEs and who died
-----------------	--

End point description:

AEs were defined as any unfavorable and unintended diagnosis, symptom, sign (including an abnormal laboratory finding), syndrome or disease which either occurs during study, having been absent at baseline, or, if present at baseline, appears to worsen. Serious adverse events were any untoward medical occurrences that result in death, are life threatening, require (or prolong) hospitalization, cause persistent or significant disability/incapacity, result in congenital anomalies or birth defects, or are other

conditions which in judgment of investigator represent significant hazards. AEs suspected to be related to study drug were determined by the investigator. The analysis was performed on safety population, defined as all subjects who received the study drug.
