

Clinical trial results:

A multicenter, open-label, randomized, parallel-group, active-controlled study comparing the efficacy and safety of Levetiracetam to Carbamazepine used as monotherapy in subjects (16 years) newly or recently diagnosed as suffering from epilepsy and experiencing partial seizures

Summary

EudraCT number	2015-004586-84
Trial protocol	Outside EU/EEA

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 October 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 September 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to demonstrate the noninferiority of the efficacy of Levetiracetam (LEV 1000 mg/day) versus Carbamazepine immediate-release (CBZ-IR 400 mg/day) used as monotherapy for at least 6 months. Efficacy will be measured as a primary variable by 6-month seizure freedom in adult subjects (≥ 16 years of age) who are newly or recently diagnosed with epilepsy and are experiencing Partial Onset Seizures (POS) with or without secondarily generalized seizures.

Protection of trial subjects:

None, population from 16 year-old

Background therapy:

Not applicable

Evidence for comparator:

Active Comparator=carbamazepine. Rationale: golden standard in epilepsy.

Actual start date of recruitment	26 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 436
Worldwide total number of subjects	436
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	28
Adults (18-64 years)	387
From 65 to 84 years	21

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

This study started to enroll subjects in China in September 2013.

Pre-assignment

Screening details:

Participant Flow refers to the Randomized Set which consists of all subjects who were randomized in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Levetiracetam

Arm description:

During the Up-Titration period (2 weeks), subjects initiated treatment at half the randomized target dose with Levetiracetam (LEV) 250 mg bid. During Stabilization and Evaluation Period (27 weeks) LEV was taken bid 500 mg.

Arm type	Experimental
Investigational medicinal product name	Keppra
Investigational medicinal product code	LEV
Other name	Levetiracetam
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

250 mg and 500 mg levetiracetam tablets

Arm title	Carbamazepine-IR
------------------	------------------

Arm description:

During the Up-Titration period (2 weeks), subjects initiated treatment at half the randomized target dose with Carbamazepine immediate-release (CBZ-IR) 200 mg qd. During Stabilization and Evaluation (27 weeks) Period CBZ-IR was taken bid 200 mg.

Arm type	Active comparator
Investigational medicinal product name	Carbamazepine immediate-release
Investigational medicinal product code	CBZ-IR
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg carbamazepine immediate-release tablets

Number of subjects in period 1	Levetiracetam	Carbamazepine-IR
Started	220	216

Statistical analyses

Statistical analysis title	Stastical Analysis 1
Statistical analysis description:	
The adjusted absolute difference in treatment group seizure-free proportions (referenced as 'Adjusted difference in proportions' in 'Method of Estimation' below) was derived from the adjusted treatment group proportions of seizure-free subjects. The adjusted proportions were derived from a logistic regression model of seizure freedom using treatment and the categories for the number of seizures in the 3-month period prior to Visit 1 (≤ 2 seizures and > 2 seizures) as covariates.	
Comparison groups	Levetiracetam (Per Protocol Set) v Carbamazepine-IR (Per Protocol Set)
Number of subjects included in analysis	357
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	adjusted difference in proportions
Point estimate	-22.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	-33.1
upper limit	-12.6

Notes:

[1] - The non-inferiority margin for the adjusted difference in seizure free proportion in the LEV minus the seizure free proportion in the CBZ-IR group was set to absolute -20% points.

Secondary: Proportion of subjects retained in the study for the duration of the period covering the Up Titration Period, Stabilization Period, and Evaluation Period

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events (AEs) were collected from Visit 1 (Week 0) until Safety Follow Up Visit (Week 35).

Adverse event reporting additional description:

Adverse Events refer to the Safety Set (SS), which is a subset of the Randomized Set and consisted of all subjects who received at least 1 dose of study medication after randomization, either Levetiracetam or Carbamazepine immediate-release.

Assessment type	Non-systematic
