

Clinical trial results:

A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel Group Study Comparing the Efficacy and Safety of 2 Dose Regimens of Subcutaneous Administration of TEV-48125 Versus Placebo for the Preventive Treatment of Episodic Migraine

Summary

EudraCT number	2015-004598-34
Trial protocol	DE CZ ES FI DK
Global end of trial date	10 April 2017

Results information

Result version number	v1 (current)
This version publication date	16 June 2018
First version publication date	16 June 2018

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 September 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- to demonstrate the efficacy 2 dose regimens of TEV-48125, as assessed by the decrease in the monthly average number of migraine days during 12-week period after the 1st dose of study drug relative to the baseline period
- to evaluate the safety and tolerability of 2 dose regimens TEV-48125 in the preventive treatment of episodic migraine (EM)

Protection of trial subjects:

This study was conducted in full accordance with the International Council on Harmonisation (ICH) Good Clinical Practice (GCP) Consolidated Guideline (E6) and any applicable national and local laws and regulations (eg, Code of Federal Regulations Title 21, Parts 50, 54, 56, 312, and 314; European Union Directive 2001/20/EC on the approximation of the laws, regulations, and administrative provisions of the Member States relating to the implementation of GCP in the conduct of clinical trials on medicinal products for human use).

Each investigator was responsible for performing the study in accordance with the protocol, ICH guidelines, and GCP, and for collecting, recording, and reporting the data accurately and properly. Agreement of each investigator to conduct and administer this study in accordance with the protocol was documented in separate study agreements with the sponsor and other forms as required by national authorities in the country where the study center is located.

Written and/or oral information about the study was provided to all patients in a language understandable by the patients. The information included an adequate explanation of the aims, methods, anticipated benefits, potential hazards, and insurance arrangements in force. Written informed consent was obtained from each patient before any study procedures or assessments were done. It was explained to the patients that they were free to refuse entry into the study and free to withdraw from the study at any time without prejudice to future treatment.

Each patient's willingness to participate in the study was documented in writing in a consent form that was signed by the patient with the date of that signature indicated. Each investigator kept the original consent forms, and copies were given to the patients.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 February 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 20
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Czech Republic: 37

Country: Number of subjects enrolled	Finland: 7
Country: Number of subjects enrolled	Canada: 14
Country: Number of subjects enrolled	Israel: 13
Country: Number of subjects enrolled	Japan: 75
Country: Number of subjects enrolled	Russian Federation: 25
Country: Number of subjects enrolled	United States: 679
Worldwide total number of subjects	875
EEA total number of subjects	69

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	853
From 65 to 84 years	22
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 2995 patients with migraine provided written informed consent. Of the 2995 patients screened, 875 met entry criteria, including diagnostic criteria for episodic migraine (EM) and diary compliance during the run-in period, and were randomized into this study from 123 study centers by 123 investigators.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

The sponsor, investigators, study staff (except for staff involved in bioanalytical analyses), and patients were blinded to treatment assignment.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Patients randomized to receive placebo received three 1.5-mL placebo injections on Day 0, and a single 1.5-mL placebo injection on Days 28 and 56.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo 2.25-mL pre-filled syringes identical in appearance to active intervention. Patients were dosed once approximately every 28 days for a total of 3 times. Study drug was administered at the clinical site.

Arm title	Fremanezumab 675 mg/placebo/placebo
------------------	-------------------------------------

Arm description:

Patients who were randomized to receive fremanezumab 675 mg/placebo/placebo received 675 mg of fremanezumab as 3 injections (225 mg/1.5 mL) on Day 0, and placebo as a single 1.5-mL injection on Days 28 and 56.

Arm type	Experimental
Investigational medicinal product name	Fremanezumab
Investigational medicinal product code	
Other name	TEV-48125, anti-calcitonin gene-related peptide (anti-CGRP)
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Fremanezumab was provided as a sterile, unpreserved, aqueous solution for injection, supplied in a 2.25-mL pre-filled syringe for single-use administration. The initial dose of 675 mg on Day 0 was given as 3 injections. Study drug was administered at the clinical site.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo 2.25-mL pre-filled syringes identical in appearance to active intervention. Patients were dosed with placebo on Days 28 and 56. Study drug was administered at the clinical site.

Arm title	Fremanezumab 225/225/225 mg
------------------	-----------------------------

Arm description:

Patients who were randomized to receive fremanezumab 225/225/225 mg received 1 active injection (225 mg/1.5 mL) on Days 0, 28 and 56.

Arm type	Experimental
Investigational medicinal product name	Fremanezumab
Investigational medicinal product code	
Other name	TEV-48125, anti-calcitonin gene-related peptide (anti-CGRP)
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Fremanezumab was provided as a sterile, unpreserved, aqueous solution for injection, supplied in a 2.25-mL pre-filled syringe for single-use administration. The initial dose of 275 mg on Day 0 was repeated on Days 28 and 56. Study drug was administered at the clinical site.

Primary: Change from Baseline in the Monthly Average Number of Migraine Days During the 12-Week Period After the First Dose of Study Drug

End point title	Change from Baseline in the Monthly Average Number of Migraine Days During the 12-Week Period After the First Dose of Study Drug
End point description: A migraine day was defined as when at least 1 of the following situations occurred: - a calendar day (0:00 to 23:59) demonstrating at least 4 consecutive hours of a headache endorsing criteria for migraine with or without aura - a calendar day (0:00 to 23:59) demonstrating at least 4 consecutive hours of a headache endorsing criteria for probable migraine, a migraine subtype where only 1 migraine criterion is missing - a calendar day (0:00 to 23:59) demonstrating a headache of any duration that was treated with migraine-specific medications (triptans and ergot compounds) Monthly averages are derived and normalized to 28 days equivalent by the following formula: (# days of efficacy variable over relevant period / # days with assessments recorded in the e-diary over the relevant period) * 28. The change is calculated as postbaseline value – baseline value.	
End point type	Primary
End point timeframe: Baseline (Days -28 to Day -1), Treatment (Days 1 – Week 12)

Primary: Participants with Adverse Events

End point title	Participants with Adverse Events ^[6]
End point description:	
An adverse event was defined as any untoward medical occurrence that develops or worsens in severity during the conduct of a clinical study and does not necessarily have a causal relationship to the study drug. Severity was rated by the investigator on a scale of mild, moderate and severe, with severe= an AE which prevents usual activities. Relationship of AE to treatment was determined by the investigator. Serious AEs include death, a life-threatening adverse event, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, a congenital anomaly or birth defect, OR an important medical event that jeopardized the patient and required medical intervention to prevent the previously listed serious outcomes.	
End point type	Primary
End point timeframe:	
Day 1 to Week 12	

Notes:

[6] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No intention to make inference based on stat analysis; the intent is to support clinical judgement.

Secondary: Percentage of Participants With At Least 50% Reduction In Monthly Average Number of Migraine Days During the 12-Week Period After the First Dose of Study Drug

End point title	Percentage of Participants With At Least 50% Reduction In Monthly Average Number of Migraine Days During the 12-Week Period After the First Dose of Study Drug
-----------------	--

End point description:

Responder rates were defined as the percentage of total subjects who reached at least a 50% reduction in the monthly average of headache days (as subjectively reported by participants in the study diary) of at least moderate severity relative to the baseline period.

For the overall analysis (Month 1-3), patients who discontinued early were considered nonresponders.

Monthly averages are derived and normalized to 28 days equivalent by the following formula: (# days of efficacy variable over relevant period / # days with assessments recorded in the e-diary over the relevant period) * 28.

The percentage reduction in monthly average is calculated as: ((baseline value - postbaseline value) / baseline value) * 100

Secondary: Change from Baseline in the Monthly Average Number of Days of Use of Any Acute Headache Medicine During the 12 Week Period After the First Dose of Study Drug

End point title	Change from Baseline in the Monthly Average Number of Days of Use of Any Acute Headache Medicine During the 12 Week Period After the First Dose of Study Drug
-----------------	---

End point description:

Patients recorded any migraine medications (name of drug, number of tablets/capsules, and the dose in milligrams per tablet/capsule) taken on each day in their electronic headache diary device. Acute migraine-specific medication included triptans or ergots.

Monthly averages are derived and normalized to 28 days equivalent by the following formula: (# days of efficacy variable over relevant period / # days with assessments recorded in the e-diary over the relevant period) * 28.

The change is calculated as postbaseline value – baseline value.

End point type	Secondary

Secondary: Change from Baseline in the Number of Migraine Days During the 4 Week Period After the First Dose of Study Drug

End point title	Change from Baseline in the Number of Migraine Days During the 4 Week Period After the First Dose of Study Drug
-----------------	---

End point description:

A migraine day was defined as when at least 1 of the following situations occurred:

- a calendar day (0:00 to 23:59) demonstrating at least 4 consecutive hours of a headache endorsing criteria for migraine with or without aura
- a calendar day (0:00 to 23:59) demonstrating at least 4 consecutive hours of a headache endorsing criteria for probable migraine, a migraine subtype where only 1 migraine criterion is missing
- a calendar day (0:00 to 23:59) demonstrating a headache of any duration that was treated with migraine-specific medications (triptans and ergot compounds)

Monthly averages are derived and normalized to 28 days equivalent by the following formula: (# days of efficacy variable over relevant period / # days with assessments recorded in the e-diary over the relevant period) * 28.

The change is calculated as postbaseline value – baseline value.

Secondary: Change from Baseline in Migraine-Related Disability Score (MIDAS), As Measured by the Migraine Disability Assessment At 4 Weeks After the Last (3rd) Dose of Study Drug

End point title	Change from Baseline in Migraine-Related Disability Score (MIDAS), As Measured by the Migraine Disability Assessment At 4 Weeks After the Last (3rd) Dose of Study Drug
-----------------	---

End point description:

The MIDAS questionnaire is a 5-item instrument developed to assess headache-related disability based on lost days of activity in 3 domains (work, household work, and nonwork) over the previous 3 months. The total score, ie, the sum of the # lost days answered for the first 5 questions, is used for grading of disability, with scores of 0-5 lost days = grade 1 (little or no disability), 6-10 lost days = grade 2 (mild disability), 11-20 lost days = grade 3 (moderate disability), and ≥ 21 lost days interpreted as grade 4 (severe disability). Negative change from baseline scores indicate a reduction (improvement) in headache-related disability.

Secondary: Electrocardiogram Finding Shifts From Baseline to Overall

End point title	Electrocardiogram Finding Shifts From Baseline to Overall
-----------------	---

End point description:

12-lead ECGs were performed before other assessments (eg, blood draws and administration of questionnaires) and performed in triplicate. The worst postbaseline finding for the patient is summarized. Only patients with both baseline and postbaseline ECGs are included. The ECG was evaluated by the investigator at the time of recording (signed and dated), and the printout was kept in the source documentation file. When potentially clinically significant findings were detected by the investigator, a cardiologist at a central diagnostic center was consulted for a definitive interpretation. Any ECG finding that was judged by the investigator as a potentially clinically significant change (worsening) compared with a baseline value was considered an adverse event.

NCS = abnormal, not clinically significant
