

## Clinical trial results:

### A DOSE FREQUENCY OPTIMIZATION, PHASE IIIB/IV TRIAL OF NIVOLUMAB 240 MG EVERY 2 WEEKS VS NIVOLUMAB 480 MG EVERY 4 WEEKS IN SUBJECTS WITH ADVANCED OR METASTATIC NON-SMALL CELL LUNG CANCER WHO RECEIVED UP TO 12 MONTHS OF NIVOLUMAB AT 3 MG/KG OR 240 MG EVERY 2 WEEKS

#### Summary

EudraCT number	2015-004633-27
Trial protocol	DE IE AT ES IT FR
Global end of trial date	18 February 2022

#### Results information

Result version number	v1 (current)
This version publication date	03 February 2023
First version publication date	03 February 2023

#### Trial information

##### Trial identification

Sponsor protocol code	CA209-384
-----------------------	-----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02713867
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Bristol-Myers Squibb
Sponsor organisation address	Chaussée de la Hulpe 185, Brussels, Belgium, 1170
Public contact	EU Study Start-Up Unit, Bristol-Myers Squibb International Corporation, Clinical.Trials@bms.com
Scientific contact	Bristol-Myers Squibb Study Director, Bristol-Myers Squibb, Clinical.Trials@bms.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 February 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 February 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The coprimary objectives are to compare the PFS rate at 6 months after randomization and PFS rate at 1 year after randomization, as measured by investigator-assessed response using Response Evaluation Criteria in Solid Tumor (RECIST) 1.1 criteria, of nivolumab 3 mg/kg every 2 weeks (Arm 1) and nivolumab 6 mg/kg every 4 weeks (Arm 2) in subjects with advanced/metastatic (Stage IIIb/IV) NSCLC (non-Sq and Sq).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 April 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 21
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	France: 108
Country: Number of subjects enrolled	Germany: 44
Country: Number of subjects enrolled	Italy: 25
Country: Number of subjects enrolled	Spain: 31
Country: Number of subjects enrolled	United States: 127
Worldwide total number of subjects	363
EEA total number of subjects	208

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	143
From 65 to 84 years	213
85 years and over	7

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

363 Randomized, 358 Treated

### Period 1

Period 1 title	Randomization
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Nivolumab 480mg
------------------	-----------------

Arm description:

Nivolumab 480mg Q4W

Arm type	Experimental
Investigational medicinal product name	nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravascular use

Dosage and administration details:

480mg Q4W

<b>Arm title</b>	Nivolumab 240mg
------------------	-----------------

Arm description:

Nivolumab 240mg Q2W

Arm type	Experimental
Investigational medicinal product name	nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravascular use

Dosage and administration details:

240mg Q2W

Number of subjects in period 1	Nivolumab 480mg	Nivolumab 240mg
Started	180	183
Completed	178	180
Not completed	2	3

### Primary: Progression Free Survival Rate (PFSR) at 12 Months

End point title	Progression Free Survival Rate (PFSR) at 12 Months <sup>[1]</sup>
End point description: The proportion of participants remaining progression free and surviving at 6 months. Participants who did not progress or die will be censored on the date of their last evaluable tumor assessment. Progression is defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (this includes the baseline sum if that is the smallest on study). In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm. Note: the appearance of one or more new lesions is also considered progression.	
End point type	Primary
End point timeframe: At 12 Months	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No Statistical Analysis done for this endpoint

End point values	Nivolumab 480mg	Nivolumab 240mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	180	183		
Units: Proportion of Participants				
number (confidence interval 95%)	0.53 (0.46 to 0.61)	0.55 (0.47 to 0.62)		

### Statistical analyses

No statistical analyses for this end point

### Primary: Progression Free Survival Rate (PFSR) at 6 Months

End point title	Progression Free Survival Rate (PFSR) at 6 Months <sup>[2]</sup>
-----------------	------------------------------------------------------------------

**End point description:**

The proportion of participants remaining progression free and surviving at 6 months. Participants who did not progress or die will be censored on the date of their last evaluable tumor assessment. Progression is defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (this includes the baseline sum if that is the smallest on study). In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm. Note: the appearance of one or more new lesions is also considered progression.

End point type	Primary
----------------	---------

**End point timeframe:**

At 6 Months

**Notes:**

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No Statistical Analysis done for this endpoint

End point values	Nivolumab 480mg	Nivolumab 240mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	180	183		
Units: Proportion of Participants				
number (confidence interval 95%)	0.76 (0.70 to 0.83)	0.79 (0.73 to 0.85)		

**Statistical analyses**

No statistical analyses for this end point

**Secondary: Percentage of Participants with an Adverse Events (AEs)**

End point title	Percentage of Participants with an Adverse Events (AEs)
-----------------	---------------------------------------------------------

**End point description:**

Percentage of participants with an Adverse Event due to any cause

An Adverse Event (AE) is defined as any new untoward medical occurrence or worsening of a preexisting medical condition in a clinical investigation participant administered study drug and that does not necessarily have a causal relationship with this treatment.

End point type	Secondary
----------------	-----------

**End point timeframe:**

Between first dose and 100 days after last dose of study therapy (Approximately Up to 16 months)

End point values	Nivolumab 480mg	Nivolumab 240mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	178	180		
Units: Percentage of Participants				
number (not applicable)	91.6	97.8		

**Statistical analyses**

No statistical analyses for this end point

### Secondary: Percentage of Participants with an Serious Adverse Events (SAEs)

End point title	Percentage of Participants with an Serious Adverse Events (SAEs)
-----------------	------------------------------------------------------------------

End point description:

Percentage of participants with an Serious Adverse Event due to any cause.

A Serious Adverse Event (SAE) is any untoward medical occurrence that at any dose:

- 1) results in death
- 2) is life-threatening (defined as an event in which the subject was at risk of death at the time of the event; it does not refer to an event which hypothetically might have caused death if it were more severe)
- 3) requires inpatient hospitalization or causes prolongation of existing hospitalization
- 4) results in persistent or significant disability/incapacity
- 5) is a congenital anomaly/birth defect
- 6) is an important medical event (defined as a medical event(s) that may not be immediately life-threatening or result in death or hospitalization but, based upon appropriate medical and scientific judgment, may jeopardize the participant or may require intervention [eg, medical, surgical] to prevent one of the other serious outcomes listed in the definition above.)

End point type	Secondary
----------------	-----------

End point timeframe:

Between first dose and 100 days after last dose of study therapy (Approximately Up to 16 months)

End point values	Nivolumab 480mg	Nivolumab 240mg

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events and SAEs: between first dose and 100 days after last dose of study therapy (Approximately 16 months up to 56 months).

All Cause Mortality, from randomization to study completion.: Approximately 5 years and 8 months.

Adverse event reporting additional description:

The number at Risk for All-Cause Mortality represents all Randomized Participants to study completion.

The number at Risk for Serious Adverse Events and Other (Not Including Serious) Adverse Events represents all participants that received at least 1 dose of study medication" or similar.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	24.1

### Reporting groups

Reporting group title	NIVOLUMAB 240 mg Q2W
-----------------------	----------------------

Reporting group description:

Nivolumab 240mg Q2W

Reporting group title	NIVOLUMAB 480 mg Q4W
-----------------------	----------------------

Reporting group description:

Nivolumab 480mg Q4W

Serious adverse events	NIVOLUMAB 240 mg Q2W	NIVOLUMAB 480 mg Q4W	
Total subjects affected by serious adverse events			
subjects affected / exposed	78 / 180 (43.33%)	80 / 178 (44.94%)	
number of deaths (all causes)	79	88	
number of deaths resulting from adverse events	15	21	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Laryngeal cancer			
subjects affected / exposed	1 / 180 (0.56%)	0 / 178 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Glottis carcinoma			
subjects affected / exposed	1 / 180 (0.56%)	0 / 178 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Lung neoplasm malignant

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 December 2015	Allows enrollment of subjects who are ineligible for or refuse chemotherapy in the first-line advanced non-small cell lung cancer setting Allows use of flat dose in the pre-study period and during the investigational period. Added HIV testing as a screening test
12 February 2016	Change the Human Immunodeficiency Virus criterion to reflect the language that is used across the nivolumab clinical development program and adjusted the frequency of magnetic resonance imaging scans in those with a history of brain metastasis to align with study assessments.
12 August 2016	To change the pre-study nivolumab requirement Add a small increase to the sample size Add immunogenicity as an endpoint Make small changes to the laboratory and tumor assessments and duration of contraception use to align the protocol with updates to the nivolumab clinical development program.
09 February 2018	Included additional language for nivolumab program level updates Added information for interim analysis
18 June 2018	Reduced sample size and modified primary endpoint from noninferiority to one-sided confidence interval around the differences of PFS rates Modified follow-up for overall survival for 3 years Added rationale for maximum treatment duration with nivolumab of 2 years

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No formal statistical analyses were conducted. Median OS was not reached in either arm.

Notes:
