

## Clinical trial results:

### Phase IV Study to Evaluate the Safety and Efficacy of the Treatment of Hyperglycemia with Gla-300 in Basal-Bolus Regimen in Hospitalised Type 2 Diabetes Mellitus (T2D) Patients Poorly Controlled with Basal Insulin and/or Non-Insulin Treatments and Therapy Intensification at Discharge with Basal Insulin

#### Summary

EudraCT number	2015-004715-20
Trial protocol	ES
Global end of trial date	17 July 2018

#### Results information

Result version number	v1 (current)
This version publication date	01 August 2019
First version publication date	01 August 2019

#### Trial information

##### Trial identification

Sponsor protocol code	GLARGL07710
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-
Other trial identifiers	STUDY NAME: COBALTA

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 October 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 July 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the efficacy of therapy intensification on discharge with basal insulin in hospitalized type 2 diabetes subjects poorly controlled with basal insulin and/or non-insulin antidiabetic agents (glycated hemoglobin [HbA1c]  $\geq$  8.0% on admission) measured by the decrease in HbA1c at 6 months post-discharge.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

During hospitalization, the treatment regimen consisted of a basal-bolus-correction (BBC) insulin therapy. The initial total daily insulin dose was calculated according to the site protocol and distributed 50% as bolus insulin and 50% as basal insulin (Gla-300). Both insulins were titrated according to a pre-defined titration algorithm. Non-insulin antidiabetic drugs (NIADs) were retired during hospitalization and re-established at hospital discharge according to clinical criteria.

Evidence for comparator: -

Actual start date of recruitment	10 June 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 112
Worldwide total number of subjects	112
EEA total number of subjects	112

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	27
From 65 to 84 years	71
85 years and over	14

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 15 sites in Spain. A total of 115 subjects were screened between 10 June 2016 and 20 December 2017, of which 3 subjects were screening failure. Screen failures were mainly due to exclusion criteria met.

### Pre-assignment

Screening details:

A total of 112 subjects were included in the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Insulin glargine 300 U/mL
-----------	---------------------------

Arm description:

Subjects received Insulin glargine 300 U/mL once daily for around 26 weeks (maximum 2 weeks hospitalization and 6 months follow-up).

Arm type	Experimental
Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	HOE901
Other name	Toujeo®
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

HOE901-U300 was administered by subcutaneous injection once daily in the evening using a pre-filled pen. The dose was self-titrated every 3-4 days to achieve fasting blood glucose levels in the target range of 90-140mg/dL.

<b>Number of subjects in period 1</b>	Insulin glargine 300 U/mL
Started	112
Completed	93
Not completed	19
Death	6
Discontinuation of study treatment	1
Adverse event	2
Not allowed concomitant medication	1
Revocation of informed consent	2
Lost to follow-up	4
Posterior diagnose of cancer	1
Exclusion criteria	1

Protocol deviation	1
--------------------	---

## Baseline characteristics

### Reporting groups

Reporting group title	Overall Study
-----------------------	---------------

Reporting group description:

Subjects received Insulin glargine 300 U/mL once daily for around 26 weeks (maximum 2 weeks hospitalization and 6 months follow-up).

Reporting group values	Overall Study	Total	
Number of subjects	112	112	
Age categorical			
Units: Subjects			
Age continuous			
Units: years			
arithmetic mean	72.3		
standard deviation	± 10.8	-	
Gender categorical			
Units: Subjects			
Female	44	44	
Male	68	68	
Body Weight			
Units: kilogram (kg)			
arithmetic mean	80.1		
standard deviation	± 16.6	-	
Body Mass Index			
Units: kilogram per square meter (kg/m <sup>2</sup> )			
arithmetic mean	30.1

Hemoglobin A1C (HbA1C)			
Units: percentage of hemoglobin			
arithmetic mean	8.9		
standard deviation	± 0.7	-	
Fasting Blood Glucose			
Units: milligrams per deciliter (mg/dL)			
arithmetic mean	205.4		
standard deviation	± 83.9	-	

## End points

### End points reporting groups

Reporting group title	Insulin glargine 300 U/mL
Reporting group description: Subjects received Insulin glargine 300 U/mL once daily for around 26 weeks (maximum 2 weeks hospitalization and 6 months follow-up).	

### Primary: Change From Discharge in Glycated Hemoglobin (HbA1c) to Month 6

End point title	Change From Discharge in Glycated Hemoglobin (HbA1c) to Month 6 <sup>[1]</sup>
-----------------	--

End point description:

Change in HbA1c was calculated by subtracting discharge value from Month 6 value. Analysis was performed on intent-to-treat (ITT) population that included all subjects who received at least one dose of Gla-300 study insulin and had a primary or secondary measure of effectiveness evaluation both at baseline and in at least one follow-up visit.

End point type	Primary
----------------	---------

End point timeframe:

Discharge, Month 6 (post discharge)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint contains single arm, no statistical analysis is provided.

<b>End point values</b>	Insulin glargine 300 U/mL			
Subject group type	Reporting group			
Number of subjects analysed	94			
Units: percentage of HbA1c				
arithmetic mean (standard deviation)	1.6 (± 1.1)			

### Statistical analyses

No statistical analyses for this end point

### Secondary: Mean Change From Hospital Admission in 7-Point Capillary Glycaemia to Hospital Discharge

End point title	Mean Change From Hospital Admission in 7-Point Capillary Glycaemia to Hospital Discharge
-----------------	--

End point description:

7-Point Capillary blood glucose were measured at the following 7 time points at baseline (hospital admission) and hospital discharge: before breakfast, 2 hours after breakfast, before lunch, 2 hours after lunch, before dinner, 2 hours after dinner, at bedtime. Analysis was performed on ITT population. Here, "n" signifies number of subjects with available data for specified category.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (hospital admission), discharge

End point values	Insulin glargine 300 U/mL			
Subject group type	Reporting group			
Number of subjects analysed	94			
Units: mg/dL				
arithmetic mean (standard deviation)				
Glycaemia before breakfast (n= 87)	25.1 (± 66.6)			
Glycaemia 2 hours after breakfast (n=61)	44.0 (± 87.3)			
Food glucose before lunch (n=90)	43.6 (± 70.6)			
Glycaemia 2 hours after lunch (n= 68)	63.0 (± 85.4)			
Glycaemia before dinner (n= 91)	53.8 (± 83.4)			
Glycaemia 2 hours after dinner (n= 66)	43.4 (± 81.1)			
Glycaemia at bedtime (n= 76)	47.9 (± 78.5)			

### Statistical analyses

No statistical analyses for this end point

### Secondary: Mean Change From Hospital Admission in Fasting Plasma Glucose (FPG) to Discharge, Month 3 and Month 6

End point title	Mean Change From Hospital Admission in Fasting Plasma Glucose (FPG) to Discharge, Month 3 and Month 6
End point description: Mean Change in FPG was calculated by subtracting baseline (hospital admission) value from hospital discharge value, Month 3 value and Month 6 value. Analysis was performed on ITT population. Here, 'n' signifies number of subjects with available data for each specified category.	
End point type	Secondary
End point timeframe: Baseline (hospital admission), discharge, Month 3, Month 6 (post discharge)	

End point values	Insulin glargine 300 U/mL			
Subject group type	Reporting group			
Number of subjects analysed	94			
Units: mg/dL				
arithmetic mean (standard deviation)				
Discharge (n= 94)	51.5 (± 90.9)			
Month 3 (n=92)	68.2 (± 96.0)			
Month 6 (n=93)	77.6 (± 86.4)			

## Statistical analyses

No statistical analyses for this end point

### Secondary: Diabetes Treatment Satisfaction Questionnaire (DTSQ) Mean Score at Month 6

End point title	Diabetes Treatment Satisfaction Questionnaire (DTSQ) Mean Score at Month 6
-----------------	--

End point description:

The DTSQs is a validated questionnaire to assess subject's satisfaction with their diabetes treatment. Total DTSQ score consists of the sum of 6 items (Q1 and Q4 - Q8), each rated on a 7-point scale (from 0 to 6). Total DTSQ score ranged from 0 (very dissatisfied) to 36 (very satisfied); higher score = more satisfaction. Analysis was performed on ITT population. Here, subjects analysed signifies subjects with available data for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Month 6 (post discharge)

<b>End point values</b>	Insulin glargine 300 U/mL			
Subject group type	Reporting group			
Number of subjects analysed	91			
Units: score on a scale				
arithmetic mean (standard deviation)	31.0 (± 4.5)			

## Statistical analyses

No statistical analyses for this end point

### Secondary: Change in Body Weight From Discharge to Month 6

End point title	Change in Body Weight From Discharge to Month 6
-----------------	---

End point description:

Change in body weight was calculated by subtracting discharge value from Month 6 value. Analysis was performed on safety population that consisted of all included all subjects who received at least one dose of the Gla-300 study insulin. Here, subjects analysed signifies number of subjects with available data for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Discharge, Month 6 (post discharge)

<b>End point values</b>	Insulin glargine 300 U/mL			
Subject group type	Reporting group			
Number of subjects analysed	86			
Units: kilogram (Kg)				
arithmetic mean (standard deviation)	0.0 (± 6.2)			

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Subjects With Confirmed or Severe Hypoglycemia During Hospitalisation and at Month 6 After Discharge

End point title	Number of Subjects With Confirmed or Severe Hypoglycemia During Hospitalisation and at Month 6 After Discharge
-----------------	--

End point description:

Severe hypoglycemia was an event in which the subject required the assistance of another person to actively administer carbohydrate, glucagon, or other resuscitative actions. Analysis was performed on safety population. Here, 'n' = subjects with available data for each specified category.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline to discharge, Month 6 (post discharge)

<b>End point values</b>	Insulin glargine 300 U/mL			
Subject group type	Reporting group			
Number of subjects analysed	112			
Units: subjects				
number (not applicable)				
During hospitalization (n=112)	28			
Month 6 (n=93)	55			

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Re-hospitalisations or Emergency Visits at Month 6 After Discharge

End point title	Number of Re-hospitalisations or Emergency Visits at Month 6 After Discharge
-----------------	--

End point description:

Analysis was performed on safety population. Here, subjects analysed signifies number of subjects with available data for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Month 6 (post discharge)

<b>End point values</b>	Insulin glargine 300 U/mL			
Subject group type	Reporting group			
Number of subjects analysed	45			
Units: number of visits				
number (not applicable)				
Re-hospitalization	46			
Emergency visits	64			

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All adverse events (AEs) were collected from signature of the informed consent form up to the final visit (Month 6) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported AEs and deaths are treatment-emergent AEs that developed/worsened and deaths that occurred during the time from first study drug intake up to Month 6. Analysis was performed on safety population.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 January 2016	Following changes were made: Change in exclusion criteria: Following criteria added: - Subjects that required intensification with rapid-acting insulin at discharge. - Pregnant, lactating women or fertile women not using contraceptive methods during study. - Subjects unable or unwilling to sign informed consent.
04 October 2016	- Change in inclusion criteria: -Minimum expected hospitalization length moved from 7 to 5 days. - Criteria removed: Maximum age of 75 years. - Change in exclusion criteria:- Criteria added: subjects who were unable to titrate or manage correctly the insulin treatment due to their medical condition. - Non-allowed treatments: -Corticosteroid treatment limitations were clarified: Oral or parenteral corticosteroids were not allowed.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
