Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000353-PIP02-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 July 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 July 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study is to compare the efficacy of maribavir to valganciclovir in CMV viremia clearance at the end of Study Week 8 in asymptomatic CMV infection in Hematopoietic Stem Cell Transplant (HSCT) recipients.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 April 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 32
Country: Number of subjects enrolled	China: 18
Country: Number of subjects enrolled	Korea, Republic of: 5
Country: Number of subjects enrolled	New Zealand: 17
Country: Number of subjects enrolled	Singapore: 18
Country: Number of subjects enrolled	Belgium: 61
Country: Number of subjects enrolled	Switzerland: 6
Country: Number of subjects enrolled	Czechia: 2
Country: Number of subjects enrolled	Germany: 20
Country: Number of subjects enrolled	Spain: 130
Country: Number of subjects enrolled	France: 48
Country: Number of subjects enrolled	United Kingdom: 28
Country: Number of subjects enrolled	Greece: 1
Country: Number of subjects enrolled	Croatia: 8
Country: Number of subjects enrolled	Hungary: 3
Country: Number of subjects enrolled	Israel: 4
Country: Number of subjects enrolled	Italy: 11
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Russian Federation: 1
Country: Number of subjects enrolled	Turkey: 11
Country: Number of subjects enrolled	Canada: 15

Country: Number of subjects enrolled	United States: 111
Worldwide total number of subjects	553
EEA total number of subjects	287

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	4
Adults (18-64 years)	421
From 65 to 84 years	128
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were randomized at 97 sites in United States, Spain, France, Germany, United Kingdom, Belgium, China, Italy, Israel, Australia, Canada, Singapore, Croatia, Czech Republic, Greece, Hungary, Korea, New Zealand, Poland, Russia, Switzerland, and Turkey from 14 April 2017 (first participant first visit) to 01 July 2022 (last participant last visit).

Pre-assignment

Screening details:

Participants who were hematopoietic stem cell transplant (HSCT) recipients with a diagnosis of asymptomatic cytomegalovirus (CMV) infection were enrolled then randomized in a 1:1 ratio to receive either maribavir or valganciclovir (along with placebo matched to comparator) in each arm in a double-blind, double-dummy fashion.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Valganciclovir 900 mg BID

Arm description:

Participants received 900 milligrams (mg) of valganciclovir along with a placebo matched to maribavir, twice daily (BID) orally for 8 weeks. Valganciclovir dose was allowed to be adjusted to 450 mg BID or 450 mg QD based on renal function impairment assessed at baseline or development of neutropenia during the study.

Arm type	Active comparator
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablets matched to maribavir.

Investigational medicinal product name	Valganciclovir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Valganciclovir 900 mg, BID. Dose was adjusted to 450 mg BID or 450 mg QD during the study for renal function impairment or neutropenia.

Arm title	Maribavir 400 mg BID
------------------	----------------------

Arm description:

Participants received 400 mg of maribavir along with a placebo matched to valganciclovir, BID orally for 8 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Placebo tablets matched to valganciclovir.	
Investigational medicinal product name	Maribavir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Maribavir 400 mg BID.	

Number of subjects in period 1	Valganciclovir 900 mg BID	Maribavir 400 mg BID
Started	277	276
Treated Participants	274	273
Participants Received 8 Weeks Treatment	140 ^[1]	179 ^[2]
Completed	217	215
Not completed	60	61
Adverse event, serious fatal	18	31
Adverse event, non-fatal	13	10
Withdrawn Consent	20	12
Reason not Specified	4	6
Noncompliance	5	2

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Participants who received 8 weeks of treatment include the participants who completed study drug treatment.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Treated participants (full analysis set) included the participants from the randomized set who took at least one dose of assigned study drug and were analyzed for efficacy and safety evaluations.

Baseline characteristics

Reporting groups

Reporting group title	Valganciclovir 900 mg BID

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Comparison groups	Maribavir 400 mg BID v Valganciclovir 900 mg BID
Number of subjects included in analysis	547
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	Difference in Percentage of Responders
Point estimate	-7.7

Confidence interval	
level	95 %
sides	2-sided
lower limit	-14.98
upper limit	-0.36

Notes:

[1] - The non-inferiority (NI) margin of the primary efficacy endpoint was 7%. If the lower limit of the 95% confidence interval (CI) was greater than -7%, then NI was assumed. Assuming 68% (maribavir) and 60% (valganciclovir) subjects achieve confirmed viremia clearance, 494 subjects (247 per group) will yield >90% power to declare NI based on 2-group test of equivalence in proportions (nQuery Advisor 7.0). Considering 10% dropout, 550 subjects (275 subjects per group) were enrolled and randomized.

Secondary: Number of Participants who Achieved Confirmed CMV Viremia Clearance and CMV Infection Symptom Control at the end of Week 8, Followed by Maintenance of Treatment Effect at Week 16

End point title	Number of Participants who Achieved Confirmed CMV Viremia Clearance and CMV Infection Symptom Control at the end of Week 8, Followed by Maintenance of Treatment Effect at Week 16
-----------------	--

End point description:

Confirmed CMV viremia clearance is defined as plasma CMV DNA concentrations less than lower limit of quantification (LLOQ; i.e. <137 International units per milliliter [IU/mL]), when assessed by COBAS® AmpliPrep/COBAS® TaqMan® CMV Test in 2 consecutive post baseline samples separated by at least 5 days. To be considered a responder for this key secondary endpoint, the participant must have received exclusively study-assigned treatment (regardless of whether study-assigned treatment was completed).

Statistical analyses

No statistical analyses for this end point

Secondary: Incidence of Grade 3 or 4 (Shift from Baseline Grade <3) and Grade 4 Neutropenia (Shift from Baseline Grade <4) While on Study Treatment

End point title	Incidence of Grade 3 or 4 (Shift from Baseline Grade <3) and Grade 4 Neutropenia (Shift from Baseline Grade <4) While on Study Treatment
-----------------	--

End point description:

Grade 3 and grade 4 neutropenia are defined as absolute neutrophil count (ANC) <1000 per cubic millimeter (/mm³) and ANC <500/mm³ respectively. Incidence of Grade 3 or 4 neutropenia represents the percentage of participants with Grade <3 (or missing) neutropenia at baseline, but Grade 3 or 4 while on study treatment. Incidence of Grade 4 neutropenia represents the number of participants with Grade <4 (or missing) neutropenia at baseline, but Grade 4 while on study treatment.

End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With Treatment-Emergent Adverse Events During the on-Treatment Period

End point title	Number of Participants With Treatment-Emergent Adverse Events During the on-Treatment Period
-----------------	--

End point description:

An adverse event (AE) is any untoward medical occurrence in a clinical investigation participants administered a pharmaceutical product and that does not necessarily have a causal relationship with this treatment. An AE that has a start date on or after the first dose of study treatment, or that has a start date before the date of first dose of study treatment but increases in severity after the first dose of study treatment, will be considered a treatment-emergent AE (TEAE).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality: From start of study drug up to end of the study (up to Week 20); Serious and Other Adverse Events: From the start of the study drug to 7 days after the last dose of study treatment (up to approximately Week 9)

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study treatment.

Assessment type	Systematic

Reporting groups

Reporting group title	Maribavir 400 mg BID
-----------------------	----------------------

Reporting group description:

Participants received 400 mg of maribavir along with a placebo matched to valganciclovir, BID orally for 8 weeks.

Reporting group title	Valganciclovir 900 mg BID
-----------------------	---------------------------

Reporting group description:

Participants received 900 mg of valganciclovir along with a placebo matched to maribavir, twice daily (BID) orally for 8 weeks. Valganciclovir dose was allowed to be adjusted to 450 mg BID or 450 mg QD based on renal function impairment assessed at baseline or development of neutropenia during the study.

Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all)	20 / 273 (7.33%) 20	26 / 274 (9.49%) 28	
Dyspnoea subjects affected / exposed occurrences (all)	2 / 273 (0.73%) 2	14 / 274 (5.11%) 16	
Skin and subcutaneous tissue disorders Pruritus subjects affected / exposed occurrences (all)	10 / 273 (3.66%) 10	17 / 274 (6.20%) 19	
Renal and urinary disorders Renal impairment subjects affected / exposed occurrences (all)	24 / 273 (8.79%) 27	15 / 274 (5.47%) 19	
Metabolism and nutrition disorders Decreased appetite subjects affected / exposed occurrences (all)	18 / 273 (6.59%) 19	16 / 274 (5.84%) 16	
Hypokalaemia subjects affected / exposed occurrences (all)	23 / 273 (8.42%) 28	22 / 274 (8.03%) 23	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 March 2017	-Modification of primary, key secondary, and secondary objectives to include participants who discontinue study treatment early and meet the criteria of confirmed CMV viremia clearance as responders in the primary efficacy analysis. - Modified Inclusion Criterion 5 to indicate that the current CMV infection must be the first episode of CMV viremia after HSCT, either primary or reactivation. - Clarified Inclusion Criterion 8 to indicate that urine pregnancy tests may be done per institutional requirements in addition to serum; however, they are not sufficient for eligibility determination. -Added a new Exclusion Criterion 3 to exclude participants with recurrent CMV infection. -Amended Exclusion Criterion 6 to indicate that participants must not be on treatment with anti-CMV agents (ganciclovir, valganciclovir, foscarnet or cidofovir) for the current CMV infection for longer than 72 hours. -Clarified Inclusion Criterion 13 that subjects who have received an unapproved agent or device within 30 days before initiation of study treatment were not eligible. -Clarified Exclusion Criterion 16 indicating that known (previously documented) HIV historical results were accepted and no additional study testing was required. -Added an intensive PK sampling schedule for adolescents. -An additional pregnancy test at 4 weeks (Visit 6/Week 4) to obtain a monthly testing interval. -Addition of highly effective method of female and male contraception per the recommendations related to contraception and pregnancy testing in clinical trials by clinical trial facilitation group. -Addition recommendation for careful monitoring of concentration levels of concomitant medications that are substrates of CYP2C19 and P-gp both after initiation of maribavir (when substrate levels may increase) and after discontinuation of maribavir (when substrate levels may decrease), in alignment with the guidance to the investigators provided in the maribavir investigator's brochure.
01 June 2017	- Added "CMV CNS infection" as one of the reasons for discontinuation and/or withdrawal. -Added basic descriptive statistics generally for all endpoints. -Added sensitivity analysis for investigation of homogeneity of treatment effect across centers/regions. -Added rules for conducting the interim population PK analysis.
01 September 2017	-Revised storage conditions of investigational product.
04 February 2019	-Expanded eligibility criteria for viral load and creatinine clearance (CrCl). -Added a third viral-load stratum for participants with very low viral load and high-risk infection, in addition to the existing low viral-load and high viral-load strata. - Added a study visit at Study Day 4 (± 1) for participants taking a narrow therapeutic index immunosuppressive agent at baseline. -Added a visit 4 days after starting new therapy with a narrow therapeutic index immunosuppressive agent for participants who begin new therapy during the course of the treatment period to align the protocol with a recent recommendation from the DMC for Study SHP620-303. -Updated contact list, including removal of contacts for sites in Latin America. -Updated safety reporting contacts to a single Global Safety e-mail and fax contact per revised safety reporting procedures. -Added exclusion for concomitant letermovir and specified required washout period. -Clarified end of period for collecting nonserious AEs as up to 30 days after the last dose of study medication. -Modified the definition of overall study AEs to include events during the overall study period through the end of study, regardless of initiation of alternative anti-CMV treatment. -Modified criteria for reporting of CMV as an AE or SAE to harmonize with the reporting format used in Study SHP620-303. -Updated Table 12 Assessments of Responders for Key Secondary Endpoint (confirmed CMV viremia clearance at the end of Study Week 8 through Week 16) to ensure assessment of responder rates consistent with assessment specified in Study SHP620-303. -Eliminated the Hematopoietic Cell Transplant Comorbidity Index (HCT-CI) assessment and deleted Appendix 5 containing the index. -Clarified language regarding starting dosage regimens, as updated entry criteria require expansion of starting doses. -Added Graft Versus Host Disease (GVHD) assessment criteria forms and added tables for GVHD diagnosis criteria.

11 February 2020	-Added Modified Randomized Set, consisting of all participants in Randomized Set who take at least 1 dose of assigned study treatment. -Revised the exploratory efficacy endpoint of duration between the first confirmed CMV viremia clearance to viremia recurrence in all participants within 8 weeks of the study and through the end of study to time from the CMV viremia clearance at Week 8 to CMV viremia recurrence requiring alternative treatment. -Updated comorbidity status evaluation. -To align with the investigator's brochure, updated the Cmax and AUC values for the increased tacrolimus when concomitantly administered with maribavir and changed 2D6 substrate to CYP2C19 substrate. -Updated number of completed for Phase 1 studies. -Removed references to an electronic diary (e-diary) due to the introduction of paper back-up diaries. -Updated the versions of the Valcyte Prescribing Information and Summary of Product Characteristics (SmPC) to specify the current version as documented in the Study Pharmacy Manual. -Corrected the unit of measure for hemoglobin. -Clarified that timing of comorbidity status evaluation is at Visit 6/Week 4 and Visit 10/Week 8. -Clarified follow-up to closure of unresolved SAEs rather than AEs at end of study. -Corrected pregnancy reporting information to indicate that it is the investigator's responsibility to obtain pregnancy outcome/infant condition information within approximately 30 calendar days and 1 year postpartum. Removed requirement for a copy of the Investigational and Marketed Products Pregnancy Report Form being sent to the CRO/ sponsor medical monitor using details specified in the emergency contact information section of protocol. -Corrected information regarding reporting of SAEs. -Removed CIs from 3 secondary efficacy endpoints as they are not clinically meaningful for these analyses.
06 December 2020	-The protocol was amended to maintain participants safety, confidentiality, and study integrity in the context of healthcare delivery challenges presented by the COVID-19 pandemic. Amendment 6 provided flexibility to subjects to opt for home healthcare solutions as permitted by local regulations. This "hybrid study design" would offer subjects the option of in clinic or home healthcare for all study visits in the treatment phase. -Guidance was provided regarding changes to the study procedures that could be implemented for subjects or study sites affected by the COVID 19 Public Health Emergency. The guidance took references from the Food and Drug Administration Guidance on Conduct of Clinical Trials of Medical Products during COVID-19 Public Health Emergency - Guidance for Industry, Investigators, and Institutional Review Boards, March 2020, updated 03 June 2020, and the European Medicines Agency (EMA) Guidance on the Management of Clinical Trials During the COVID 19 (Coronavirus) Pandemic, Version 3 (28 Apr 2020).
24 March 2021	-Removed language extending measures to other situations beyond the COVID-19 pandemic ("or other future similar unexpected public health concerns" as this section applies only to the current COVID 19 pandemic. -Updated the guidance on management of clinical trials during the COVID 19 pandemic. Clarified that the site must contact the sponsor for approval of the alternative method for obtaining informed consent prior to implementation. -Clarified the recording of abuse, misuse, overdose, and medication errors on the AE CRF.
02 July 2021	The main purpose of Amendment 8 was to update the sponsor name and address from Shire ViroPharma, Inc (Shire) to Takeda Development Center Americas, Inc (TDC Americas; Takeda) and to clarify the secondary endpoints.
15 September 2021	The main purpose of Amendment 9 was to update description of drug interactions consistent with the latest Investigator's Brochure.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
