

## Clinical trial results:

### Equimolar Mixture of Oxygen and Nitrous Oxide (EMONO) for the Treatment of Peripheral Neuropathic Pain: a Randomised, International, Multicentre, Placebo-Controlled, Phenotype-stratified Phase IIa Study Summary

EudraCT number	2015-004779-64
Trial protocol	DE FR
Global end of trial date	30 August 2018

#### Results information

Result version number	v1 (current)
This version publication date	14 November 2019
First version publication date	14 November 2019

#### Trial information

##### Trial identification

Sponsor protocol code	ALMED-15-C2-054
-----------------------	-----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02957851
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 October 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 August 2018
Global end of trial reached?	Yes
Global end of trial date	30 August 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the effect of 3 consecutive days of one-hour administration of Nitrous Oxide/Oxygen 50%/50% (EMONO) versus placebo as Oxygen/Nitrogen 22%/78% (synthetic medical air), in add-on therapy to chronic analgesic treatments, on average pain intensity in patients with chronic peripheral neuropathic pain.

Protection of trial subjects:

The study was conducted in compliance with Good Clinical Practice (GCP) guidelines, and in keeping with the most recent revised version of the Declaration of Helsinki and in the European Directive 2001/20/CE on 4th April 2001 on the approximation of the laws, regulations and administrative provisions of the member states relating to the implementation of GCP in the conduct of the clinical trials on medicinal products for human use.

The Protocol and Substantial Amendments were submitted to the Independent Ethics Committee (IEC) and national Competent Authority (CA) for approval in each participating country.

The enrolment of the patients in the study started only after the written approvals of the corresponding IEC and national CA.

Background therapy:

Drugs with anti-NMDA mechanism of action such as ketamine were not allowed during the study and within the 4 weeks before the Selection visit (V0).

All treatments for chronic neuropathic pain and non drugs therapies such as hypnosis being currently used by the patients at the entry into the study were allowed throughout the study providing these treatments were stable since at least 4 weeks prior the Selection visit V0.

Other concomitant treatments prescribed for co-morbidities (hypertension, dyslipidemia...) or associated chronic diseases (such as diabetes, cardiovascular disease, respiratory diseases...) were allowed.

Rescue therapy limited to paracetamol was authorised in case the pain intensity increased too much according to the patient during the study.

Evidence for comparator:

The comparator is a placebo, here synthetic medical air (Oxygen/Nitrogen 22%/78%).

Actual start date of recruitment	21 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	France: 270
Country: Number of subjects enrolled	Germany: 17
Worldwide total number of subjects	287
EEA total number of subjects	287

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	213
From 65 to 84 years	72
85 years and over	2

## Subject disposition

### Recruitment

Recruitment details:

A total of 287 patients were enrolled (240 met the inclusion criteria) from 22 centres in 2 countries; 2 in Germany and 20 in France

First Patient Enrolled: 21 November 2016

Last Patient Completed: 30 August 2018

### Pre-assignment

Screening details:

Adult patients with chronic peripheral neuropathic pain. Diagnosis based on DN4 questionnaire (score  $\geq 4$ ) and NeuPSIG criteria ("definite" or "probable" levels). Baseline pain intensity between 4 and 9 on NRS. Analgesic medications had to be stable since at least 4 weeks prior to the study.

### Pre-assignment period milestones

Number of subjects started	287
Number of subjects completed	240

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	At least one selection/inclusion criterion not met: 39
Reason: Number of subjects	Consent withdrawn by subject: 5
Reason: Number of subjects	Adverse event, non-fatal: 1
Reason: Number of subjects	Protocol deviation: 1
Reason: Number of subjects	Subject not available: 1

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Blinding implementation details:

Patient and the physician (Investigator 1) who performed selection, inclusion, stratification and follow-ups visits (including study end) remained blinded as to the nature of study treatment. Only caregiver (Investigator 2) who performed randomisation according to stratification and administered the treatment was unblinded. All information regarding randomisation and administration have been collected in a separate source document.

### Arms

Are arms mutually exclusive?	Yes
Arm title	EMONO

Arm description:

Equimolar gases mixture of medicinal nitrous oxide 50% and medicinal oxygen 50% (EMONO) from Air Liquide Santé International.

Arm type	Experimental
Investigational medicinal product name	EMONO
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Medicinal gas, compressed
Routes of administration	Inhalation use

Dosage and administration details:

60 min per day during 3 consecutive days.

<b>Arm title</b>	Placebo
Arm description:	
Oxygen/Nitrogen 22%/78% (synthetic medical air)	
Arm type	Placebo
Investigational medicinal product name	Medical Air
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Medicinal gas, compressed
Routes of administration	Inhalation use

Dosage and administration details:

60 min per day during 3 consecutive days.

<b>Number of subjects in period 1<sup>[1]</sup></b>	EMONO	Placebo
Started	120	120
Completed	112	117
Not completed	8	3
Subject decided not to participate anymore	1	-
Consent withdrawn by subject	3	1
Adverse event, non-fatal	1	-
Subject decision	1	-
Subject non available	-	1
Unavailability of the subject	1	-
Subject could not come on site (personal reason)	-	1
Lost to follow-up	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 287 subjects signed an informed consent. 240 subjects received at least one administration of investigational medicinal product.

## Baseline characteristics

### Reporting groups

Reporting group title	EMONO
Reporting group description: Equimolar gases mixture of medicinal nitrous oxide 50% and medicinal oxygen 50% (EMONO) from Air Liquide Santé International.

Day 10=104; Day 17=108; Day 24=106; Day 31=106

### Statistical analyses

<b>Statistical analysis title</b>	ANCOVA Day 10 - mFAS
Statistical analysis description:	
ANCOVA comparing EMONO and Placebo at Day 10 in the mFAS, with baseline score, sensory phenotype at baseline (presence or absence of evoked pain) and treatment group as factors.	
Number of subjects included in analysis = 194	
Comparison groups	EMONO - mFAS v Placebo - mFAS

Number of subjects included in analysis	221
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.4149
Method	ANCOVA
Parameter estimate	LS-mean difference
Point estimate	-4.17
Confidence interval	
level	95 %
sides	2-sided
lower limit	-14.24
upper limit	5.9

<b>Statistical analysis title</b>	ANCOVA Day 17 - mFAS
-----------------------------------	----------------------

Statistical analysis description:

ANCOVA comparing EMONO and Placebo at Day 17 in the mFAS, with baseline score, sensory phenotype at baseline (presence or absence of evoked pain) and treatment group as factors.

Number of subjects included in analysis = 200

Comparison groups	EMONO - mFAS v Placebo - mFAS
Number of subjects included in analysis	221
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0795
Method	ANCOVA
Parameter estimate	LS-mean difference
Point estimate	-7.55
Confidence interval	
level	95 %
sides	2-sided
lower limit	-15.99
upper limit	0.9

<b>Statistical analysis title</b>	ANCOVA Day 24 - mFAS
-----------------------------------	----------------------

Statistical analysis description:

ANCOVA comparing EMONO and Placebo at Day 24 in the mFAS, with baseline score, sensory phenotype at baseline (presence or absence of evoked pain) and treatment group as factors.

Number of subjects included in analysis = 199

Comparison groups	EMONO - mFAS v Placebo - mFAS
Number of subjects included in analysis	221
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0985
Method	ANCOVA
Parameter estimate	LS-mean difference
Point estimate	-8.06

Confidence interval	
level	95 %
sides	2-sided
lower limit	-17.64
upper limit	1.52

<b>Statistical analysis title</b>	ANCOVA Day 31 - mFAS
-----------------------------------	----------------------

Statistical analysis description:

ANCOVA comparing EMONO and Placebo at Day 31 in the mFAS, with baseline score, sensory phenotype at baseline (presence or absence of evoked pain) and treatment group as factors.

Number of subjects included in analysis = 195

Comparison groups	EMONO - mFAS v Placebo - mFAS
Number of subjects included in analysis	221
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.2808
Method	ANCOVA
Parameter estimate	LS-mean difference
Point estimate	-5.8

Confidence interval

level	95 %
sides	2-sided
lower limit	-16.37
upper limit	4.78

## Secondary: Weekly Evolution of NPSI Evoked Pain Score up to 28 days

End point title	Weekly Evolution of NPSI Evoked Pain Score up to 28 days
-----------------	--

End point description:

Evolution assessed using percent change score from baseline. For patients with a baseline score of 0, no percent change was calculable.

End point type	Secondary
----------------	-----------

End point timeframe:

Between baseline and the end of each week after the last administration of treatment (Day 10, Day 17, Day 24, Day 31).

End point values	EMONO - mFAS	Placebo - mFAS		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	103 <sup>[7]</sup>	118 <sup>[8]</sup>		
Units: units on a scale				
arithmetic mean (standard deviation)

## Post-hoc: Total number of adverse events by timing of occurrence

End point title	Total number of adverse events by timing of occurrence
-----------------	--

End point description:

Treatment Emergent Adverse Events (TEAEs) were categorised according to their timing of occurrence:

\*Category 1: TEAEs started and ended on or before Study Day 3

\*Category 2: TEAEs started or ended after Study Day 3

In case of multiple occurrences of a same preferred term for a same patient, one in category 1 (TEAEs started and ended on or before Study Day 3) and one in category 2 (TEAEs started or ended after Study Day 3), the TEAE was counted in category 2.

If study day of start of adverse event was between Day 1 and Day 3 and study day of end of adverse event was missing or if study day of start of adverse event was missing then the TEAE was classified as category 2.

End point type	Post-hoc
----------------	----------

End point timeframe:

Between the start of first study treatment administration and study end.

End point values	EMONO	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	120	120		
Units: adverse event				
Treatment-emergent adverse events (TEAE)	984	414		
TEAEs started and ended on or before Study Day 3	812	318		
TEAEs started or ended after Study Day 3	172	96		

## Statistical analyses

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events observed from the start of study treatment until end of follow-up.

Assessment type	Systematic
-----------------	------------
