

Clinical trial results: Bilastine and Montelukast in patients with Seasonal Allergic Rhinoconjunctivitis and Asthma: Efficacy of Concomitant Administration - the SKY Study Summary

EudraCT number	2015-004806-40
Trial protocol	SK CZ PL LV HR IT
Global end of trial date	23 November 2016

Results information

Result version number	v1 (current)
This version publication date	07 March 2018
First version publication date	07 March 2018

Trial information

Trial identification

Sponsor protocol code	MEIN/15/Bil-ARC/001
-----------------------	---------------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 April 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 November 2016
Global end of trial reached?	Yes
Global end of trial date	23 November 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that concomitant administration of montelukast and bilastine is superior to bilastine monotherapy in SARC symptoms, as assessed by Total Symptoms Scores (TSS) after 4 weeks of treatment

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki, Good Clinical Practice (GCP) guidelines and local law requirements

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 March 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 295
Country: Number of subjects enrolled	Slovakia: 21
Country: Number of subjects enrolled	Croatia: 5
Country: Number of subjects enrolled	Czech Republic: 72
Country: Number of subjects enrolled	Latvia: 23
Country: Number of subjects enrolled	Italy: 4
Worldwide total number of subjects	420
EEA total number of subjects	420

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	420
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The recruitment started on 13 April 2016 and terminated on 23 November 2016.
454 patients with SARC and mild to moderate asthma as comorbidity were screened.
420 patients were randomised of which 388 patients completed the study.

Pre-assignment

Screening details:

454 patients with SARC and mild to moderate asthma as comorbidity were screened.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Subject, Data analyst

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Bilastine Monotherapy
------------------	-----------------------

Arm description:

Bilastine 20 mg tablets + placebo tablets

Arm type	Experimental
Investigational medicinal product name	bilastine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

20 mg/die

Arm title	Montelukast Monotherapy
------------------	-------------------------

Arm description:

Montelukast 10 mg tablets + placebo tablets

Arm type	Experimental
Investigational medicinal product name	Montelukast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

10 mg/die

Arm title	Bilastine + Montelukast
------------------	-------------------------

Arm description:

bilastine 20 mg tablets + montelukast 10 mg tablets

Arm type	Experimental

Primary: Montelukast+Bilastine is superior to Bilastine Monotherapy in SARC symptoms

End point title	Montelukast+Bilastine is superior to Bilastine Monotherapy in SARC symptoms
End point description: The primary objective of the study was to demonstrate that concomitant administration of Montelukast and Bilastine is superior to Bilastine monotherapy in SARC symptoms, assessed by total Symptoms Scores after 4 weeks of treatment.	
End point type	Primary
End point timeframe: 4 weeks of treatment (from baseline to 4 weeks of treatment)	

End point values	Bilastine Monotherapy	Bilastine + Montelukast		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	140	143		
Units: TSS score				
number (confidence interval 95%)	-3.4462 (-4.0708 to -2.8217)	-3.2522 (-3.8718 to -2.6327)		

Statistical analyses

Statistical analysis title	Montelukast+Bilastine vs Bilastine in TSS -4 weeks
Statistical analysis description:	
Considering the ITT patients, the primary efficacy endpoint (i.e. the TSS) was assessed by analysis of covariance (ANCOVA) with the TSS change from baseline to after 4 weeks of treatment (calculated as difference in average post-baseline TSS to baseline TSS) as the dependent variable, treatment as fixed effect, centre as random effect, and baseline TSS as covariate.	
Comparison groups	Bilastine Monotherapy v Bilastine + Montelukast
Number of subjects included in analysis	283
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.5721
Method	ANCOVA
Parameter estimate	Mean difference (final values)
Point estimate	-0.194
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.8693
upper limit	0.4813
Variability estimate	Standard error of the mean
Dispersion value	0.3429

Secondary: Montelukast+Bilastine compared with Montelukast and Bilastine monotherapies in asthma control

End point title	Montelukast+Bilastine compared with Montelukast and Bilastine monotherapies in asthma control
End point description:	
To evaluate the efficacy of concomitant montelukast and bilastine compared with montelukast and bilastine monotherapies in asthma control, as assessed by Asthma Quality of Life Questionnaire (AQLQ) after 4 weeks and at the end of treatment.	
End point type	Secondary
End point timeframe:	
After 4 weeks of treatments and in the end of study (from baseline)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Entire treatment period (85 days, 12 weeks).

Adverse event reporting additional description:

The tolerability was excellent with overall low rates of TEAEs, patient reporting TEAEs and TEAEs recorded as related to study medication during an entire treatment period of 85 days.

Assessment type	Systematic
