Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 October 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 September 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and efficacy of treatment with VX-371 in hypertonic saline (HS) compared to HS alone in subjects with cystic fibrosis (CF) who are greater than or equal to (\geq) 12 years of age, homozygous for the F508del-cystic fibrosis transmembrane conductance regulator (CFTR) mutation, and being treated with Orkambi.

Protection of trial subjects:

The study was conducted in accordance with the ethical principles stated in the Declaration of Helsinki and the International Council on Harmonization (ICH) Guideline for Good Clinical Practice (GCP).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 February 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 30
Country: Number of subjects enrolled	United States: 92
Country: Number of subjects enrolled	Czech Republic: 5
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Ireland: 12
Worldwide total number of subjects	142
EEA total number of subjects	50

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	55

Adults (18-64 years)	87
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Subjects were randomized to 1 of 4 treatment sequences, each of which included 2 treatment periods. Treatment periods were separated by 28 day washout period.

Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence 1 (VX-371 + HS, Then HS): VX-371 + HS

Arm description:

Subjects received VX-371 in combination with 3 milliliter (mL) 4.2% hypertonic saline (HS) in treatment period 1 followed by HS alone in treatment period 2.

Arm type	Experimental
Investigational medicinal product name	VX-371
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

VX-371 administered twice daily for 28 days in treatment period 1.

Investigational medicinal product name	Hypertonic saline (HS)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

HS administered twice daily for 28 days in treatment period 1.

Arm title	Sequence 2 (HS, Then VX-371 + HS): HS
------------------	---------------------------------------

Arm description:

Subjects received 3 mL 4.2% HS in treatment period 1 followed by VX-371 in combination with 3 mL 4.2% HS in treatment period 2.

Arm type	Experimental
Investigational medicinal product name	Hypertonic saline (HS)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

HS administered twice daily for 28 days in treatment period 1.

Arm title	Sequence 3 (VX-371 + placebo, then placebo): VX-371 + placebo
------------------	---

Arm description:

Subjects received VX-371 in combination with placebo (0.17% saline) in treatment period 1 followed by placebo (0.17% saline) alone in treatment period 2.

Arm type	Experimental
Investigational medicinal product name	VX-371
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

VX-371 administered twice daily for 28 days in treatment period 1.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Placebo (0.17% saline) administered twice daily for 28 days in treatment period 1.

Arm title	Sequence 4 (Placebo, Then VX-371 + placebo): Placebo
------------------	--

Arm description:

Subjects received placebo (0.17% saline) in treatment period 1 followed by VX-371 in combination with placebo (0.17% saline) in treatment period 2.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Placebo (0.17% saline) administered twice daily for 28 days in treatment period 1.

Number of subjects in period 1	Sequence 1 (VX-371 + HS, Then HS): VX-371 + HS	Sequence 2 (HS, Then VX-371 + HS): HS	Sequence 3 (VX-371 + placebo, then placebo): VX-371 + placebo
Started	49	47	22
Completed	45	42	21
Not completed	4	5	1
Subject refused further dosing (not due to AE)	-	2	-
Adverse event	3	3	1

Subject refused further dosing (not due to AE)	-
Adverse event	-
Noncompliance with study drug	-

Period 2

Period 2 title	Treatment Period 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence 1 (VX-371 + HS, Then HS): HS

Arm description:

Subjects received VX-371 in combination with 3 mL 4.2% HS in treatment period 1 followed by HS alone in treatment period 2.

Arm type	Experimental
Investigational medicinal product name	Hypertonic saline (HS)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

HS administered twice daily for 28 days in treatment period 2.

Arm title	Sequence 2 (HS, Then VX-371 + HS): VX-371 + HS
------------------	--

Arm description:

Subjects received 3 mL 4.2% HS in treatment period 1 followed by VX-371 in combination with 3 mL 4.2% HS in treatment period 2.

Arm type	Experimental
Investigational medicinal product name	Hypertonic saline (HS)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

HS administered twice daily for 28 days in treatment period 2.

Investigational medicinal product name	VX-371
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

VX-371 administered twice daily for 28 days in treatment period 2.

Arm title	Sequence 3 (VX-371 + placebo, then placebo): Placebo
------------------	--

Arm description:

Subjects received VX-371 in combination with placebo (0.17% saline) in treatment period 1 followed by placebo (0.17% saline) alone in treatment period 2.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Placebo (0.17% saline) administered twice daily for 28 days in treatment period 2.

Arm title	Sequence 4 (Placebo, Then VX-371 + placebo): VX-371 + placebo
------------------	---

Arm description:

Subjects received placebo (0.17% saline) in treatment period 1 followed by VX-371 in combination with placebo (0.17% saline) in treatment period 2.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Placebo (0.17% saline) administered twice daily for 28 days in treatment period 2.

Investigational medicinal product name	VX-371
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

VX-371 administered twice daily for 28 days in treatment period 2.

Number of subjects in period 2 ^[1]	Sequence 1 (VX-371 + HS, Then HS): HS	Sequence 2 (HS, Then VX-371 + HS): VX-371 + HS	Sequence 3 (VX-371 + placebo, then placebo): Placebo
Started	43	40	18
Completed	41	36	15
Not completed	2	4	3
Other noncompliance	-	1	1
Requires prohibited medication	-	-	1
Adverse event	2	3	-
Unspecified	-	-	1

Number of subjects in period 2 ^[1]	Sequence 4 (Placebo, Then VX-371 + placebo): VX-371 + placebo
Started	24
Completed	24
Not completed	0

Other noncompliance	-
Requires prohibited medication	-
Adverse event	-
Unspecified	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Not all the subjects who completed treatment period 1 entered treatment period 2. That is why the number of subjects starting treatment period 2 is not consistent with the number of subjects completing the treatment period 1

Primary: Safety and Tolerability as Assessed by Number of Subjects With Treatment Emergent Adverse Events (TEAEs) and Serious TEAEs

End point title	Safety and Tolerability as Assessed by Number of Subjects With Treatment Emergent Adverse Events (TEAEs) and Serious TEAEs ^[1]
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. AEs included abnormal clinically significant findings for spirometry, clinical laboratory parameters, standard 12-lead electrocardiograms (ECGs), vital signs and ophthalmologic examinations. Serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent were events between first dose of study drug and up to 112 days (up to 28 days after last dose) that were absent before treatment or that worsened relative to pretreatment state. TEAEs included both serious and non-serious TEAEs. Safety set included all subjects who received at least 1 dose of inhaled study drug.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day 1) up to 28 days post last administration of study drug (up to 112 days)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint is descriptive in nature, no statistical analysis is provided.

Primary: Absolute Change From Study Baseline in Percent Predicted Forced Expiratory Volume in 1 Second (ppFEV1) at Day 28

End point title	Absolute Change From Study Baseline in Percent Predicted Forced Expiratory Volume in 1 Second (ppFEV1) at Day 28
-----------------	--

End point description:

FEV1 is the volume of air that can forcibly be blown out in one second, after full inspiration. Study Baseline was defined as the most recent non-missing measurement before the first dose of inhaled study drug in the study. Day 28 measurements after treatment discontinuation from the treatment period in which discontinuation occurred were included in the analysis. The full analysis set (FAS) included all randomised subjects who carried the intended homozygous F508del-cystic fibrosis transmembrane conductance regulator (CFTR) mutation and received at least 1 dose of inhaled study drug. Here, "Number of subjects analysed" signifies subjects evaluable for this endpoint.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 September 2016	<ul style="list-style-type: none">- Corrected the study restrictions for diuretics and renin-angiotensive drugs- Contraception language changed to align with regulatory requirements

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
