Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 July 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 July 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To compare the disease free survival (DFS) of ADXS11-001 to placebo administered in the adjuvant setting following concurrent chemotherapy and radiotherapy (CCRT) administered with curative intent to subjects with high-risk locally advanced squamous, adenosquamous, or adenocarcinoma of the cervix (HRLACC).

Protection of trial subjects:

1. Nausea and vomiting should be treated aggressively with prophylactic antiemetic therapy prior to each infusion and every 8 hours as needed. Subjects should also be strongly encouraged to maintain liberal oral fluid intake.
2. Close monitoring of blood pressure at baseline and during the post-infusion period to prevent grade 3 and 4 hypotension.
3. The study treatment dose will not be modified (i.e., reduced or increased). However, treatment may be delayed or discontinued for drug related severe and life-threatening toxicities.
4. Treatment may be delayed at the discretion of the investigator for adverse events that are not drug-related, but which would either put the subject at risk from treatment, adversely affect the efficacy of study treatment, confound the interpretation of study results, or prevent the assessment of study results.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 2
Country: Number of subjects enrolled	Brazil: 11
Country: Number of subjects enrolled	United States: 20
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Malaysia: 3
Country: Number of subjects enrolled	Mexico: 3
Country: Number of subjects enrolled	Russian Federation: 17
Country: Number of subjects enrolled	Serbia: 11
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 2
Country: Number of subjects enrolled	Spain: 12
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	Ukraine: 23

Worldwide total number of subjects	110
EEA total number of subjects	12

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	102
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants completed cisplatin-based combination chemotherapy and radiation (CCRT) before enrollment into the study.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants with locally advanced cervical cancer at higher risk for recurrence (HRLACC) received ADXS11-001 matching placebo by intravenous infusion for approximately 60 minutes every 3 weeks for 3 doses (Weeks 1, 4 and 7) and thereafter, every 8 weeks for 5 doses (Weeks 15, 23, 31, 39, and 47) during treatment phase or until disease recurrence. Participants received a 7-day course placebo matching to either trimethoprim/sulfamethoxazole or ampicillin starting 72 hours post treatment in prime and maintenance phase.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

intravenous infusion for approximately 60 minutes every 3 weeks for 3 doses (Weeks 1, 4 and 7) and thereafter, every 8 weeks for 5 doses (Weeks 15, 23, 31, 39, and 47) during treatment phase or until disease recurrence. Participants received a 7-day course placebo matching to either trimethoprim/sulfamethoxazole or ampicillin starting 72 hours post treatment in prime and maintenance phase.

Arm title	ADXS11-001
------------------	------------

Arm description:

Participants with HRLACC received ADXS11-001 at a dose of 1×10^9 colony forming units (CFU) by intravenous infusion for approximately 60 minutes every 3 weeks for 3 doses (Weeks 1, 4 and 7) and thereafter, every 8 weeks for 5 doses (Weeks 15, 23, 31, 39, and 47) during treatment phase or until disease recurrence. Participants received a 7-day course of either trimethoprim/sulfamethoxazole or ampicillin starting 72 hours post treatment in prime and maintenance phase.

Primary: Disease Free Survival (DFS)

End point title	Disease Free Survival (DFS) ^[1]
End point description: DFS was defined as the time from randomization until death or recurrence. The date of recurrence was defined as the date of the first time point when recurrence of disease was determined. The determination of recurrence should occur by definitive pathologic tissue confirmation (e.g., biopsy/fine needle aspirate). However, in those cases where it was not medically feasible to obtain a tissue sample then radiographic evidence, when confirmed by independent radiology review, was used to determine recurrence.	
End point type	Primary
End point timeframe: From the time of randomization to recurrence or death (Maximum duration: 44.7 months)	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The Sponsor terminated the study early based on a business decision (not related to safety or efficacy reasons). Upon early study termination, all subjects randomized in the study were moved to the End of Treatment visit. Therefore, efficacy evaluations including disease-free survival (DFS) and overall survival were not performed on any subject.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 May 2018	1. Subjects with a history of hysterectomy following neoadjuvant chemotherapy were excluded. 2. Antibiotic requirement during Lm surveillance consisted of a 3-week course of trimethoprim/sulfamethoxazole, ampicillin or placebo (reduced from 6 months) and 35 months of follow-up with blood testing. 3, Use of PET/CT was an acceptable method, in addition to MRI, for baseline and post-treatment assessment of the pelvis. 4. Cervical and vaginal cytology was to be performed only at screening unless necessary by the treating physician.
19 February 2019	1. Sensitivity or allergy to ampicillin was removed as an exclusion criterion. 2. Premedication regimen (antihistamine, NSAIDs, antiemetics, histamine H2-receptor antagonist) was to be given one hour prior to the procedure. 3. Patients who discontinued early for reasons other than disease occurrence were to immediately enter the follow-up period of the study. 4. Grading and management guidelines for hypotension, hypoxia, encephalopathy, organ toxicity, fever, and constitutional symptoms were added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
