

Clinical trial results:

LEO 32731 for the treatment of moderate to severe psoriasis vulgaris
A phase 2a proof of concept study comparing an oral tablet formulation of LEO 32731 with a corresponding placebo tablet in patients with moderate to severe psoriasis vulgaris.

A multi-centre, prospective, randomized, double-blind, 2-arm, placebo-controlled, parallel-group study with 16 weeks twice times daily oral treatment.

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 February 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 July 2017
Global end of trial reached?	Yes
Global end of trial date	06 July 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the efficacy of LEO 32731 30 mg compared with that of placebo after 16 weeks of oral treatment of psoriasis vulgaris.

Protection of trial subjects:

This clinical trial was conducted to conform to the principles of the Declaration of Helsinki as adopted by the 18th World Medical Association General Assembly, 1964, and the amendment from Somerset West, South Africa, October 1996. All subjects received written and verbal information concerning the clinical trial. Subjects were asked to consent that their personal data were recorded, collected, processed and could be transferred to other countries in accordance with any national legislation regulating privacy and data protection.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 July 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 36
Worldwide total number of subjects	36
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	36
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

50 subjects were screened and 14 subjects were screening failures. 36 subjects were randomised: 18 to each treatment. The randomised subjects were enrolled at 7 trial sites in Germany.

Pre-assignment

Screening details:

Key inclusion criteria:

Moderate to severe psoriasis vulgaris with or without psoriatic arthritis (maximum 4 joints with active arthritis) for ≥ 6 months prior to screening.

Men, or women of non-childbearing potential.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Blinding implementation details:

The packaging and labelling of the IMPs contained no evidence of their identity. It was not considered possible to differentiate between the IMPs solely by sensory evaluation.

Arms

Are arms mutually exclusive?	Yes
Arm title	LEO 32731 30 mg

Arm description:

Subjects received twice daily treatment for 16 weeks: a 1-week dose escalation followed by 15 weeks of full dose treatment.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Each dose consisted of 3 tablets, including 1 or 2 placebo tablets in combination with 1 or 2 LEO 32731 tablets, supplied at a strength of 10 mg or 30 mg.

Subjects were dosed twice daily as follows: Days 1–3: 1 tablet LEO 32731 10 mg + 2 placebo tablets; Days 4–6: 2 tablets LEO 32731 10 mg + 1 placebo tablet; Day 7–Week 16 : 1 tablet LEO 32731 30 mg + 2 placebo tablets.

Investigational medicinal product name	LEO 32731
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

upper limit	-2

Secondary: PGA treatment success at Week 16

End point title	PGA treatment success at Week 16
End point description:	
Physician's Global Assessment of disease severity (PGA) is done on a 5-point ordinal scale and represents the average lesion severity on the trunk, limbs, and scalp. The assessment is based on the condition of the disease at the time of evaluation. Treatment success according to PGA is defined as reaching either of the 2 lowest points on the ordinal scale: 'clear' or 'almost clear'

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 June 2016	Before any subjects were screened, the protocol was amended to address objections from the regulatory authority and the central IEC, and to take into account new findings on the tolerability of LEO 32731 that emerged from another phase 1 trial. The trial design was changed as follows: The maximum dose of LEO 32731 was reduced from 50 mg twice daily to 30 mg twice daily, and the number of trial arms was reduced from 4 to 2. According the original protocol, subjects were to be randomised to twice daily doses of 30 mg, 40 mg, or 50 mg LEO 32731 or placebo in a 1:1:1:1 ratio. According to the amended protocol, subjects were randomised to twice daily doses of 30 mg LEO 32731 or placebo in a 1:1 ratio. As a consequence, the number of subjects to be randomised was reduced from 72 to 36, and the percentage of subjects to be treated with LEO 32731 was reduced from 75% to 50%.
21 December 2016	<p>During the trial conduct, the protocol was amended to allow trial sites to include more subjects. The maximum number of subjects per trial site was increased from 8 subjects to approximately one third of the total number of subjects to be randomised (that is, approximately one third of 36). This change was based on the following considerations:</p> <ul style="list-style-type: none">- Evaluation of the recruitment estimates for each trial site did not indicate that one site would be dominating the recruitment.- The planned analysis method for the primary endpoint, PASI at Week 16, allowed for low subject numbers per trial site (should this happen as a result of some sites recruiting more than 8 subjects), as long as each treatment arm was represented at each site, which was expected to be fulfilled.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
