Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 January 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 January 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the dose-response relationship of up to 3 doses of seltorexant (20, and 40 milligram [mg], with 10 mg added at the interim analysis [IA]) compared with placebo as adjunctive therapy to an antidepressant drug in improving depressive symptoms in subjects with major depressive disorder (MDD) who have had an inadequate response to current antidepressant therapy with a selective serotonin reuptake inhibitor (SSRI) or serotonin-norepinephrine reuptake inhibitor (SNRI). This study also assessed the safety and tolerability of seltorexant compared with placebo as adjunctive therapy to an antidepressant in subjects with MDD.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. The informed consent form (ICF) was performed for all subjects and the ICFs were all approved by local/country Independent Review Boards (IRBs) or Ethics Committees (ECs). Safety evaluations were based upon the adverse events (AEs), vital sign measurements, clinical laboratory test results, physical examinations. Electrocardiogram (ECG), Physician Withdrawal Checklist (PWC)-20, Columbia Suicide Severity Rating Scale (C-SSRS), Arizona Sexual Experiences Scale (ASEX).

Background therapy:

All subjects needed to be on an selective serotonin reuptake inhibitor (SSRI) or serotonin-norepinephrine reuptake inhibitor (SNRI) to participate though the Sponsor did not supply this.

Evidence for comparator: -

Actual start date of recruitment	31 August 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 66
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Finland: 10
Country: Number of subjects enrolled	Japan: 37
Country: Number of subjects enrolled	Russian Federation: 45
Country: Number of subjects enrolled	Ukraine: 39
Country: Number of subjects enrolled	United States: 83
Worldwide total number of subjects	283
EEA total number of subjects	79

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	270
From 65 to 84 years	13
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 434 subjects were screened of which 287 subjects were randomly assigned to receive study treatment. Of the 287 subjects randomly assigned to treatment, 251 subjects completed the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received JNJ-42847922 matching placebo capsule once daily orally from Day 1 to Day 41 (Week 6).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received JNJ-42847922 matching placebo capsules once daily orally from Day 1 to Day 41 (Week 6).

Arm title	JNJ-42847922 10 milligram (mg)
------------------	--------------------------------

Arm description:

Subjects received JNJ-42847922 10 mg capsules once daily orally from Day 1 to Day 41 (Week 6).

Arm type	Experimental
Investigational medicinal product name	JNJ-42847922 10 mg
Investigational medicinal product code	
Other name	Seltorexant, MIN-202
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received JNJ-42847922 10 mg capsules once daily orally from Day 1 to Day 41 (Week 6).

Arm title	JNJ-42847922 20 mg
------------------	--------------------

Arm description:

Subjects received JNJ-42847922 20 mg capsules once daily orally from Day 1 to Day 41 (Week 6).

Arm type	Experimental
Investigational medicinal product name	JNJ-42847922 20 mg
Investigational medicinal product code	
Other name	Seltorexant, MIN-202
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received JNJ-42847922 20 mg capsules once daily orally from Day 1 to Day 41 (Week 6).

Arm title	JNJ-42847922 40 mg
Arm description:	
Subjects received JNJ-42847922 40 mg capsules (2*20 mg capsules) once daily orally from Day 1 to Day 41 (Week 6).	
Arm type	Experimental
Investigational medicinal product name	JNJ-42847922 40 mg
Investigational medicinal product code	
Other name	Seltorexant, MIN-202
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received JNJ-42847922 40 mg capsules once daily orally from Day 1 to Day 41 (Week 6).

Primary: Change From Baseline to Week 6 in Montgomery-Asberg Depression Rating Scale (MADRS) Total Score at Day 42

End point title	Change From Baseline to Week 6 in Montgomery-Asberg Depression Rating Scale (MADRS) Total Score at Day 42
End point description: MADRS is a clinician-administered scale designed to measure depression severity and detects changes due to antidepressant treatment. The MADRS evaluates the following 10 items: apparent sadness, reported sadness, inner tension, reduced sleep, reduced appetite, concentration difficulties, lassitude, inability to feel, pessimistic thoughts, and suicidal thoughts. Each item is scored from 0 (item not present or normal) to 6 (severe or continuous presence of the symptoms), for a total possible score of 60. Higher scores represent a more severe condition. Full analysis set included all subjects who were randomly assigned to study drug and received at least 1 dose of study drug. Here N (numbers of subjects analysed) signifies numbers of subjects evaluable for this endpoint.

Primary: Percentage of Subjects With Treatment-emergent Adverse Events as a Measure of Safety and Tolerability

End point title	Percentage of Subjects With Treatment-emergent Adverse Events as a Measure of Safety and Tolerability ^[1]
-----------------	----------------------------------------------------------------------------------------------------------------------

End point description:

An adverse event (AE) was any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. Treatment-emergent were events between administration of study drug and up to Week 8 that were absent before treatment or that worsened relative to pre-treatment state. Safety analyses set included all subjects who were randomly assigned to study drug and received at least 1 dose of study drug.

End point title	Change From Baseline in the Sheehan Disability Scale (SDS) at Day 42
-----------------	----------------------------------------------------------------------

End point description:

The SDS is a 5-item questionnaire which has been widely used and accepted for assessment of functional impairment and associated disability. The first 3 items assess disruption of (1) work/school, (2) social life, and (3) family life/home responsibilities using a 0-10 rating scale. The scores for the first 3 items are summed to create a total score of 0-30 where a higher score indicates greater impairment. It also has 1 item on days lost from school or work and 1 item on days when underproductive. Negative

change in score indicates improvement. Full analysis set included subjects who were randomly assigned to study drug and received at least 1 dose of study drug. Here, 'N' (number of subjects analyzed) signifies those subjects who were evaluable for this endpoint.

Secondary: Change From Baseline in the MADRS Total Score at Day 42 in Subjects With Major Depressive Disorder (MDD) With Anxious Distress Versus Subjects With MDD Without Anxious Distress

End point title	Change From Baseline in the MADRS Total Score at Day 42 in Subjects With Major Depressive Disorder (MDD) With Anxious Distress Versus Subjects With MDD Without Anxious Distress
-----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

MADRS is a clinician-administered scale designed to measure depression severity and detects changes due to antidepressant treatment. The MADRS evaluates the following 10 items: apparent sadness, reported sadness, inner tension, reduced sleep, reduced appetite, concentration difficulties, lassitude, inability to feel, pessimistic thoughts, and suicidal thoughts. Each item is scored from 0 (item not present or normal) to 6 (severe or continuous presence of the symptoms), for a total possible score of 60. Higher scores represent a more severe condition. Full analysis set included subjects who were randomly assigned to study drug and received at least 1 dose of study drug. Here, 'N' (number of subjects analyzed) signifies those subjects who were evaluable for this endpoint. Here, 'n' (number of subjects analyzed) signifies those subjects who were evaluable for specific categories.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 July 2016	The key reasons for this amendment were: 1) to add a 3rd dosage arm of JNJ-42847922 to Stage 1; 2) to include population pharmacokinetic (PK) and exposure-response analyses at interim analysis; 3) to add the Insomnia Severity Index (ISI) as a continuous variable to be a specific endpoint; 4) to include diagnostic measures of major depressive disorder (MDD) capable of evaluating associated specifiers, such as anxious distress; 5) to update and/or clarify eligibility criteria; and 6) to provide the latest clinical information regarding JNJ-42847922. This amendment was issued before first patient enrolled.
12 October 2016	The key reasons for this amendment were: 1) to clarify timing of evening dosing to occur at bedtime and at least 3 hours after the last meal; 2) to clarify that pharmacogenomic sampling is optional and to include a separate informed consent form (ICF) for pharmacogenomic sampling; 3) to update and/or clarify eligibility criteria; 4) to update and/or clarify the description of the placebo capsule; 5) to clarify that anticipated events were not designated in Japan; and 6) to provide the latest clinical information regarding JNJ-42847922. This amendment was issued before first patient enrolled.
27 February 2017	The key reasons for this amendment were to simplify the dose-finding strategy and reduce the sample size by: 1) removing Stage 2 from the original study design; 2) removing the active comparator (quetiapine) arm from the study; 3) reducing the number of JNJ-42847922 treatment arms. This amendment was issued before first patient enrolled.
21 July 2017	The key reasons for this amendment were to report preclinical safety data from a 9-month study in dogs, to add instructions to investigators to ensure awareness of preclinical data regarding seizures/convulsions, to increase the sample size of this study, and to prohibit use of ketamine or esketamine for depression prior to or during the study. This amendment was issued before first patient enrolled.
24 April 2018	To add results of the male and female rat fertility studies. To exclude further enrollment of women of childbearing potential (WOCBP). In addition, other minor changes and clarifications related to study procedures were made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

During interim analysis, number of subjects with baseline ISI score ≥ 15 was nearing limits. so seltorexant 10 mg was introduced and seltorexant 40 mg was removed from randomization after IA, dose-groups were not balanced when based on ISI score.

Notes:
