

## Clinical trial results:

### **A Randomized, Double-Blind, Parallel-Group, Placebo-Controlled, Multicenter Phase III Study of the Efficacy and Safety of Olokizumab in Subjects with Moderately to Severely Active Rheumatoid Arthritis Inadequately Controlled by Tumor Necrosis Factor Alpha (TNF-) Inhibitor Therapy**

#### **Summary**

EudraCT number	2015-005308-27
Trial protocol	CZ HU DE
Global end of trial date	01 October 2019

#### **Results information**

Result version number	v1 (current)
This version publication date	31 December 2020
First version publication date	31 December 2020

#### **Trial information**

##### **Trial identification**

Sponsor protocol code	CL04041025
-----------------------	------------

##### **Additional study identifiers**

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02760433
WHO universal trial number (UTN)	-
Other trial identifiers	IND No: 104933

Scientific contact	Medical Department, R-Pharm International, +7 495 956 7937,

Notes:

##### **Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 October 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 October 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the efficacy of Olokizumab (OKZ) 64 milligram (mg) administered subcutaneously (SC) once every 2 weeks (q2w) or once every 4 weeks (q4w) relative to placebo in subjects with moderately to severely active rheumatoid arthritis (RA) inadequately controlled by tumor necrosis factor alpha (TNF- $\alpha$ ) therapy.

Protection of trial subjects:

The study was conducted in accordance with the protocol, the ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences International Ethical Guidelines, applicable International Council for Harmonisation Good Clinical Practice Guidelines, and applicable laws and regulations.

Background therapy:

Stable methotrexate (MTX) dose was continued during the study. Folic acid  $\geq 5$  mg per week or equivalent was required during the study.

Evidence for comparator: -

Actual start date of recruitment	25 January 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 28
Country: Number of subjects enrolled	Brazil: 24
Country: Number of subjects enrolled	Colombia: 13
Country: Number of subjects enrolled	Czechia: 36
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Hungary: 24
Country: Number of subjects enrolled	Korea, Republic of: 4
Country: Number of subjects enrolled	Mexico: 73
Country: Number of subjects enrolled	Poland: 13
Country: Number of subjects enrolled	Russian Federation: 21
Country: Number of subjects enrolled	United States: 128
Worldwide total number of subjects	368
EEA total number of subjects	77

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	300
From 65 to 84 years	68
85 years and over	0

## Subject disposition

### Recruitment

#### Recruitment details:

This was a randomized, double-blind, parallel-group, placebo-controlled, multicenter Phase III study conducted at 123 study centers in 11 countries between 25 January 2017 and 01 October 2019. A total of 718 subjects were screened, of which 350 subjects were screen failures and 368 subjects were randomized in the study.

### Pre-assignment

#### Screening details:

Subjects with moderately to severely active RA with an inadequate response to TNF- $\alpha$  inhibitor therapy for at least 12 weeks prior to Screening with  $\geq 1$  licensed TNF- $\alpha$  inhibitor were assessed for eligibility. Eligible subjects were randomized in 2:2:1 ratio to receive OKZ 64 mg q4w, OKZ 64 mg q2w, or placebo in 24-week double-blind Treatment Period.

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Assessor, Subject

#### Blinding implementation details:

Since the study treatments were distinguishable, they were prepared by the unblinded pharmacist (or their unblinded designee) out of sight of the subject and any blinded study team members. The study treatments were provided to blinded site staff in blinded syringes that were identical in appearance.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	OKZ 64 mg q4w

#### Arm description:

Subjects received an SC injection of OKZ 64 mg q4w alternating with SC injections of placebo q4w to maintain blinding and stable dose of MTX. The last dose of study treatment was at Week 20 of the Treatment Period from Week 0 to Week 24. After completion of the double-blind Treatment Period at Week 24, subjects were offered the opportunity to enter the optional open-label extension (OLE) study. Subjects who did not consent to participate in the OLE study attended the End of Treatment (EoT) Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44.

Arm type	Experimental
Investigational medicinal product name	Olokizumab
Investigational medicinal product code	
Other name	OKZ, CDP6038, L04041
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

#### Dosage and administration details:

Subjects received 64 mg q4w OKZ by SC injection in either abdomen or thigh, prepared in blinded syringes of 0.4 milliliter (mL).

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

#### Dosage and administration details:

Subjects received placebo (sodium chloride 0.9%) q4w by SC injection in either abdomen or thigh, prepared in blinded syringes of 0.4 mL.

<b>Arm title</b>	OKZ 64 mg q2w
Arm description: Subjects received an SC injection of OKZ 64 mg q2w and stable dose of MTX. The last dose of study treatment was at Week 22 of the Treatment Period from Week 0 to Week 24. After completion of the double-blind Treatment Period at Week 24, subjects were offered the opportunity to enter the optional OLE study. Subjects who did not consent to participate in the OLE study attended the EoT Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44.	
Arm type	Experimental
Investigational medicinal product name	Olokizumab
Investigational medicinal product code	
Other name	OKZ, CDP6038, L04041
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details: Subjects received 64 mg q2w OKZ by SC injection in either abdomen or thigh, prepared in blinded syringes of 0.4 mL.	
<b>Arm title</b>	Placebo

Arm description: Subjects received an SC injection of Placebo q2w and stable dose of MTX. The last dose of placebo was at Week 14 of the Treatment Period from Week 0 to Week 24. Subjects were re-randomized in a blinded fashion to receive either OKZ 64 mg q4w alternating with placebo q4w or OKZ 64 mg q2w starting at Week 16 and continuing for the remainder of the double-blind Treatment Period. After completion of the double-blind Treatment Period at Week 24, subjects were offered the opportunity to enter the optional OLE study. Subjects who did not consent to participate in the OLE study attended the EoT Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details: Subjects received placebo (sodium chloride 0.9%) q2w or q4w by SC injection in either abdomen or thigh, prepared in blinded syringes of 0.4 mL.	
Investigational medicinal product name	Olokizumab
Investigational medicinal product code	
Other name	OKZ, CDP6038, L04041
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details: Subjects received 64 mg q4w or q2w OKZ by SC injection in either abdomen or thigh, prepared in blinded syringes of 0.4 mL.	

<b>Number of subjects in period 1</b>	OKZ 64 mg q4w	OKZ 64 mg q2w	Placebo
Started	161	138	69
Received Treatment	161	138	69

Continued into Safety Follow-Up Period	14 <sup>[2]</sup>	9 <sup>[3]</sup>	8 <sup>[4]</sup>

Enrolled in OLE	127 <sup>[5]</sup>	124 <sup>[6]</sup>	51 <sup>[7]</sup>
Completed	134	128	56
Not completed	27	10	13
Consent withdrawn by subject	23	9	11
Other	3	1	1
Lost to follow-up	1	-	1

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The subjects who discontinued treatment early and entered the safety follow-up period were considered completers for the whole study if they performed all 3 follow-up visits. Therefore, the number of subjects who completed study can be higher than number of treatment completers.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The subjects who discontinued treatment early had to enter the safety follow-up period as well as subjects who completed treatment period; therefore, the numbers subjects enrolled in OLE and continued to the safety follow-up period are higher than those who completed treatment period.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The subjects who discontinued treatment early had to enter the safety follow-up period as well as subjects who completed treatment period; therefore, the numbers subjects enrolled in OLE and continued to the safety follow-up period are higher than those who completed treatment period.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The subjects who discontinued treatment early had to enter the safety follow-up period as well as subjects who completed treatment period; therefore, the numbers subjects enrolled in OLE and continued to the safety follow-up period are higher than those who completed treatment period.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The subjects who discontinued treatment early had to enter the safety follow-up period as well as subjects who completed treatment period; therefore, the numbers subjects enrolled in OLE and continued to the safety follow-up period are higher than those who completed treatment period.

[6] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The subjects who discontinued treatment early had to enter the safety follow-up period as well as subjects who completed treatment period; therefore, the numbers subjects enrolled in OLE and continued to the safety follow-up period are higher than those who completed treatment period.

[7] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The subjects who discontinued treatment early had to enter the safety follow-up period as well as subjects who completed treatment period; therefore, the numbers subjects enrolled in OLE and continued to the safety follow-up period are higher than those who completed treatment period.

## Baseline characteristics

### Reporting groups

Reporting group title	OKZ 64 mg q4w

### Primary: Percentage of Subjects Meeting the American College of Rheumatology 20% Response Criteria (ACR20) at Week 12

End point title	Percentage of Subjects Meeting the American College of Rheumatology 20% Response Criteria (ACR20) at Week 12
End point description:	
To meet ACR20 response criteria at Week 12, a subject must have had at least 20% improvement from baseline in the following ACR Core Set values:	
<ul style="list-style-type: none"><li>• Tender joint count (TJC) (68 joint count)</li><li>• Swollen joint count (SJC) (66 joint count)</li></ul>	
An improvement of at least 20% from baseline in at least 3 of the following 5 components: 1) Patient Global Assessment of Disease Activity (Visual Analog Scale [VAS]); 2) Subject Assessment of Pain (VAS); 3) Health Assessment Questionnaire - Disability Index (HAQ-DI); 4) Physician Global Assessment (VAS); 5) Level of acute phase reactant (C-reactive protein [CRP]).	
A responder was a subject meeting the ACR20 criteria and remaining on randomized treatment and in the study at Week 12. Analysis was performed on the intent-to-treat (ITT) population, which included all randomized subjects.

[2] - P-values are 1-sided p-values from 2x2 chi-square test, assessed for statistical significance at the alfa level of 0.0125. Confidence interval was calculated using Newcombe hybrid score method.

## Secondary: Percentage of Subjects Achieving Low Disease Activity, Defined as Disease Activity Score 28-Joint Count CRP (DAS 28 [CRP]) <3.2 at Week 12

End point title	Percentage of Subjects Achieving Low Disease Activity, Defined as Disease Activity Score 28-Joint Count CRP (DAS 28 [CRP]) <3.2 at Week 12
-----------------	--

**End point description:**

The DAS28 (CRP) was calculated using the SJC (28 joints), TJC (28 joints), CRP level (mg/mL), and the Patient Global Assessment of Disease Activity (VAS) (in millimeters) according to the formula:  
$$\text{DAS28 (CRP)} = 0.56 \times \sqrt{\text{TJC}} + 0.28 \times \sqrt{\text{SJC}} + 0.36 \times \ln(\text{CRP} + 1) + 0.014 \times \text{Patient Global Assessment of Disease Activity (VAS)} + 0.96.$$

The 28 joints evaluated for the SJC and TJC were: shoulders, elbows, wrists, interphalangeal on digit 1, proximal interphalangeals on digits 2 to 5, metacarpophalangeal on digits 1 to 5, and knees. A subject classed as having low disease activity who remained on randomized treatment and who were in the study at Week 12 and had a DAS28 (CRP) <3.2. Analysis was performed on the ITT population which included all randomized subjects.

## Secondary: Mean Change From Baseline to Week 12 in HAQ-DI

End point title	Mean Change From Baseline to Week 12 in HAQ-DI
End point description:	
<p>The HAQ-DI is a patient reported questionnaire that provided an assessment of impact of disease and its treatment on physical function. HAQ-DI assessed degree of difficulty experienced in 8 domains of daily living activities using 20 questions. For each question, level of difficulty was scored from 0 to 3 where 0= without any difficulty, 1= with some difficulty, 2= much difficulty, and 3= unable to do. Each category was scored by taking maximum score of each question. HAQ-DI was calculated by dividing sum of category scores by number of categories with at least 1 question answered. If fewer than 6 categories had responses, no disability score was calculated. A decrease from baseline indicated an improvement in physical ability. Analysis of covariance (ANCOVA) with treatment as fixed effect and baseline value as covariate was used to determine Least Square Mean (LSM) change from baseline for ITT population, which included all randomized subjects with Baseline and Week 12 HAQ-DI values.</p>

Analysis specification	Pre-specified
Analysis type	superiority <sup>[9]</sup>
P-value	= 0.0054 <sup>[10]</sup>
Method	Chi-squared
Parameter estimate	Risk difference (RD)
Point estimate	0.164
Confidence interval	
level	Other: 97.5 %
sides	2-sided
lower limit	0.02
upper limit	0.278

Notes:

[9] - Due to the hierarchy in the statistical gate-keeping strategy, the p-value cannot be used for formal inference because superiority was not shown for the HAQ-DI Improvement at Week 12 secondary endpoint.

[10] - P-values are 1-sided p-values from 2x2 chi-square test. Confidence interval was calculated using Newcombe hybrid score method.

<b>Statistical analysis title</b>	Comparison of OKZ 64 mg q2w Vs Placebo
Comparison groups	OKZ 64 mg q2w v Placebo
Number of subjects included in analysis	207
Analysis specification	Pre-specified
Analysis type	superiority <sup>[11]</sup>
P-value	= 0.0041 <sup>[12]</sup>
Method	Chi-squared
Parameter estimate	Risk difference (RD)
Point estimate	0.174
Confidence interval	
level	Other: 97.5 %
sides	2-sided
lower limit	0.027
upper limit	0.294

Notes:

[11] - Due to the hierarchy in the statistical gate-keeping strategy, the p-value cannot be used for formal inference because superiority was not shown for the HAQ-DI Improvement at Week 12 secondary endpoint.

[12] - P-values are 1-sided p-values from 2x2 chi-square test. Confidence interval was calculated using Newcombe hybrid score method.

### Secondary: Percentage of Subjects Achieving Remission, Defined as Clinical Disease Activity Index (CDAI) $\leq 2.8$ (Remission) at Week 12

End point title	Percentage of Subjects Achieving Remission, Defined as Clinical Disease Activity Index (CDAI) $\leq 2.8$ (Remission) at Week 12
-----------------	---

End point description:

The CDAI was calculated using the SJC (28 joints), TJC (28 joints), the Patient Global Assessment of Disease Activity (VAS) [in centimeters (cm)], and the Physician Global Assessment (VAS) (in cm) according to the formula:

$CDAI = SJC + TJC + \text{Patient Global Assessment of Disease Activity (VAS)} + \text{Physician Global Assessment (VAS)}$ .

Subjects were classed as in remission if they remained on randomized treatment and in the study at Week 12 and with a CDAI of  $\leq 2.8$ . Analysis was performed on the ITT population, which included all randomized subjects.

End point type	Secondary
----------------	-----------

End point timeframe:

At Week 12

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment emergent adverse events (TEAEs) were recorded after the first dose of the study treatment until the last visit of the subject in the study (up to 44 weeks in total) regardless of relationship to study treatment.

Adverse event reporting additional description:

The safety population included all subjects who received at least 1 dose of study treatment. Data for TEAEs were reported below. A TEAE was defined as an adverse event that first occurred or worsened in severity after the first dose of the study treatment.

Assessment type	Systematic

### Reporting groups

Reporting group title	OKZ 64 mg q4w
-----------------------	---------------

Reporting group description:

Subjects received an SC injection of OKZ 64 mg q4w alternating with SC injections of placebo q4w to maintain blinding and stable dose of MTX. The last dose of study treatment was at Week 20 of the Treatment Period from Week 0 to Week 24. After completion of the double-blind Treatment Period at Week 24, subjects were offered the opportunity to enter the optional OLE study. Subjects who did not consent to participate in the OLE study attended the EoT Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44.

Reporting group title	OKZ 64 mg q2w
-----------------------	---------------

Reporting group description:

Subjects received an SC injection of OKZ 64 mg q2w and stable dose of MTX. The last dose of study treatment was at Week 22 of the Treatment Period from Week 0 to Week 24. After completion of the double-blind Treatment Period at Week 24, subjects were offered the opportunity to enter the optional OLE study. Subjects who did not consent to participate in the OLE study attended the EoT Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received an SC injection of Placebo q2w and stable dose of MTX. The last dose of placebo was at Week 14 of the Treatment Period from Week 0 to Week 24. Subjects were re-randomized in a blinded fashion to receive either OKZ 64 mg q4w alternating with placebo q4w or OKZ 64 mg q2w starting at Week 16 and continuing for the remainder of the double-blind Treatment Period. After completion of the double-blind Treatment Period at Week 24, subjects were offered the opportunity to enter the optional OLE study. Subjects who did not consent to participate in the OLE study attended the EoT Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44. TEAEs that occur after the first administration of placebo and prior to any administration of OKZ at or after Week 16 are summarized as a TEAE under placebo reporting group.

Reporting group title	Placebo - OKZ 64 mg q4w
-----------------------	-------------------------

Reporting group description:

Subjects received an SC injection of Placebo q2w and stable dose of MTX. The last dose of placebo was at Week 14 of the Treatment Period from Week 0 to Week 24. Subjects were re-randomized in a blinded fashion to receive OKZ 64 mg q4w alternating with placebo q4w starting at Week 16 and continuing for the remainder of the double-blind Treatment Period. After completion of the double-blind Treatment Period at Week 24, subjects were offered the opportunity to enter the optional OLE study. Subjects who did not consent to participate in the OLE study attended the EoT Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44. TEAEs that occur after the first administration of OKZ 64 mg q4w at or after Week 16 are summarized as a TEAE under Placebo-OKZ 64 mg q4w reporting group.

Reporting group title	Placebo - OKZ 64 mg q2w
-----------------------	-------------------------

Reporting group description:

Subjects received an SC injection of Placebo q2w and stable dose of MTX. The last dose of placebo was at Week 14 of the Treatment Period from Week 0 to Week 24. Subjects were re-randomized in a blinded fashion to receive OKZ 64 mg q2w starting at Week 16 and continuing for the remainder of the double-blind Treatment Period. After completion of the double-blind Treatment Period at Week 24, subjects

were offered the opportunity to enter the optional OLE study. Subjects who did not consent to participate in the OLE study attended the EoT Visit at Week 24. After the EoT Visit, these subjects were scheduled for 3 Safety Follow-Up Visits up to Week 44. TEAEs that occur after the first administration of OKZ 64 mg q2w at or after Week 16 are summarized as a TEAE under Placebo-OKZ 64 mg q2w reporting group.
