

Clinical trial results:

Immunogenicity and Safety of the DTacP-IPV//PRP~T Combined Vaccine (PENTAXIM™) Given as a Three-Dose Primary Vaccination at 2, 3 and 4 Months of Age or 3, 4 and 5 Months of Age and followed by a Booster Dose at 18 to 20 Months, as compared to commercially available DTacP, Hib conjugate (Act-HIB™) and IPV (IMOVAX Polio™) monovalent vaccines in infants in People's Republic of China

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 August 2009
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 January 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the non-inferiority in terms of seroprotection rates (Diphtheria, Tetanus, Polio types 1, 2 and 3, PRP) and seroconversion/vaccine response rates to Pertussis antigens (PT, FHA) of sanofi pasteur's DTacP-IPV//PRP~T combined vaccine (PENTAXIM™) administered at 2, 3 and 4 months of age or administered at 3, 4 and 5 months of age versus commercially available Wuhan's DTacP vaccine and sanofi pasteur's Hib tetanus conjugate (Act-HIB™) and IPV (IMOVAX Polio™) monovalent vaccines, one month after the three-dose primary vaccination of the combined vaccine.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were randomized and vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment was also available on site in case of any immediate allergic reactions.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	16 March 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 792
Worldwide total number of subjects	792
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	792

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study subjects were enrolled from 16 March 2007 to 24 July 2007 at 3 clinic centers in China.

Pre-assignment

Screening details:

A total of 792 subjects who met all inclusion and none of the exclusion criteria were randomized and vaccinated in the study.

Period 1

Period 1 title	Primary phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Are arms mutually exclusive?	Yes
Arm title	Group A

Arm description:

Subjects received Sanofi Pasteur's DTacP-IPV//PRP~T combined vaccine (PENTAXIM™) at 2, 3, and 4 months of age.

Arm type	Experimental
Investigational medicinal product name	DTacP-IPV//PRP~T combined vaccine (PENTAXIM™)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular into the anterolateral aspect of the right thigh, 1 injection each at 2, 3, and 4 months of age and a booster at 18 to 20 months of age.

Arm title	Group B
------------------	---------

Arm description:

Subjects received Sanofi Pasteur's DTacP-IPV//PRP~T combined vaccine (PENTAXIM™) at 3, 4, and 5 months of age.

Arm type	Experimental
Investigational medicinal product name	DTacP-IPV//PRP~T combined vaccine (PENTAXIM™)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular into the anterolateral aspect of the right thigh, 1 injection each at 3, 4, and 5 months of age and a booster at 18 to 20 months of age.

Arm title	Group C
------------------	---------

Arm description:

Subjects received the control vaccine (Wuhan's DTacP, Act-HIB™ and IMOVAX Polio™) at 3, 4, and 5 months of age.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	DTacP combined vaccine (Diphtheria, Tetanus and Acellular Pertussis Combined Vaccine, Absorbed)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular into the right deltoid, 1 injection each at 3, 4, and 5 months of age and a booster at 18 to 20 months of age.

Investigational medicinal product name	PRP-Tetanus conjugated vaccine (Act-HIB™)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular into the anterolateral aspect of the left thigh, 1 injection each at 3, 4, and 5 months of age and a booster at 18 to 20 months of age.

Investigational medicinal product name	IPV vaccine (IMOVAX Polio™)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular into the anterolateral area of the right thigh, 1 injection each at 3, 4, and 5 months of age and a booster at 18 to 20 months of age.

Number of subjects in period 1	Group A	Group B	Group C
Started	264	264	264

Subject analysis set description: Subjects received a booster dose of Wuhan's DTacP, Sanofi Pasteur's Hib tetanus conjugate (Act-HIB™) and IPV (IMOVAX Polio™) monovalent vaccines at 18 to 20 months of age.	

Primary: Percentage of Subjects with Seroconversion/Seroconversion to Vaccine Antigens One Month after a Primary Series with Either DTacP-IPV//PRP~T Combined Vaccine (PENTAXIM™) or DTacP, Hib conjugate (Act-HIB™) and IPV (IMOVAX Polio™) Monovalent Vaccines

End point title	Percentage of Subjects with Seroconversion/Seroconversion to Vaccine Antigens One Month after a Primary Series with Either DTacP-IPV//PRP~T Combined Vaccine (PENTAXIM™) or DTacP, Hib conjugate (Act-HIB™) and IPV (IMOVAX Polio™) Monovalent Vaccines
-----------------	---

End point description:

Anti-Diphtheria, Anti-Tetanus, Anti-Polyribosyl Ribitol Phosphate conjugated to Tetanus protein (PRP), Anti-Pertussis toxoid, Anti-Filamentous hemagglutinin (FHA) were assessed by enzyme-linked immunosorbent assay (ELISA). Anti-Polio types 1, 2, and 3 were assessed by seroneutralization.

Seroprotection for Anti-Diphtheria and Anti-Tetanus was defined as antibody titers ≥ 0.1 IU/mL, ≥ 8 (dil) for Anti-Polio types 1, 2, and 3, and ≥ 0.15 μ g/mL for Anti-PRP. Seroconversion for Anti-Pertussis toxoid and Anti-FHA was defined as antibody titers ≥ 4 -fold increase EU/mL.

End point type	Primary

Statistical analyses

Statistical analysis title	Anti-Diphtheria; Group A-Group C
Statistical analysis description:	
This non-inferiority analysis assessed the difference between Group A minus Group C for Anti-Diphtheria.	
Comparison groups	Group A v Group C
Number of subjects included in analysis	486
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	Difference; Group A-Group C
Point estimate	0
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.49
upper limit	1.63

Notes:

[1] - Non-inferiority was demonstrated if the 95% confidence interval of the difference (study vaccine minus control vaccine) lay entirely above the clinically acceptable limit for non-inferiority ($> -10\%$). Group A was non-inferior to Group C.

Statistical analysis title	Anti-Tetanus; Group A-Group C
Statistical analysis description:	
This non-inferiority analysis assessed the difference between Group A minus Group C for Anti-Tetanus.	
Comparison groups	Group A v Group C

Number of subjects included in analysis	486
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[2]
Parameter estimate	Difference; Group A-Group C
Point estimate	0
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.49
upper limit	1.63

Notes:

[2] - Non-inferiority was demonstrated if the 95% confidence interval of the difference (study vaccine minus control vaccine) lay entirely above the clinically acceptable limit for non-inferiority ($> -10\%$). Group A was non-inferior to Group C.

Statistical analysis title	Anti-Polio 1; Group A-Group C

lower limit	-2.05
upper limit	1.99

Notes:

[13] - Non-inferiority was demonstrated if the 95% confidence interval of the difference (study vaccine minus control vaccine) lay entirely above the clinically acceptable limit for non-inferiority (> -10%). Group B was non-inferior to Group C.

Statistical analysis title	Anti-PRP; Group B-Group C
Statistical analysis description:	
This non-inferiority analysis assessed the difference between Group B minus Group C for Anti-PRP.	
Comparison groups	Group B v Group C
Number of subjects included in analysis	461
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[14]
Parameter estimate	Difference; Group B-Group C
Point estimate	-0.88
Confidence interval	
level	95 %
sides	2-sided
lower limit	-3.14
upper limit	0.87

Notes:

[14] - Non-inferiority was demonstrated if the 95% confidence interval of the difference (study vaccine minus control vaccine) lay entirely above the clinically acceptable limit for non-inferiority (> -10%). Group B was non-inferior to Group C.

Statistical analysis title	Anti-Pertussis toxoid; Group B-Group C
Statistical analysis description:	
This non-inferiority analysis assessed the difference between Group B minus Group C for Anti-Pertussis toxoid.	
Comparison groups	Group B v Group C
Number of subjects included in analysis	461
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[15]
Parameter estimate	Difference; Group B-Group C
Point estimate	2.62
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.44
upper limit	5.6

Notes:

[15] - Non-inferiority was demonstrated if the 95% confidence interval of the difference (study vaccine minus control vaccine) lay entirely above the clinically acceptable limit for non-inferiority ($> -10\%$). Group B was non-inferior to Group C.

Statistical analysis title	Anti-FHA; Group B-Group C
Statistical analysis description: This non-inferiority analysis assessed the difference between Group B minus Group C for Anti-FHA.	
Comparison groups	Group B v Group C
Number of subjects included in analysis	461
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[16]
Parameter estimate	Difference; Group B-Group C
Point estimate	10.48
Confidence interval	
level	95 %
sides	2-sided
lower limit	6.52
upper limit	15.19

Notes:

[16] - Non-inferiority was demonstrated if the 95% confidence interval of the difference (study vaccine minus control vaccine) lay entirely above the clinically acceptable limit for non-inferiority ($> -10\%$). Group B was non-inferior to Group C.

Secondary: Geometric Mean Titers of Antibodies Against Vaccine Antigens Before and Following A Three Dose Primary Vaccination with Either DTacP-IPV//PRP~T Combined Vaccine (PENTAXIM™) or DTacP, Hib conjugate (Act-HIB™) and IPV (IMOVAX Polio™) Monovalent Vaccines

End point title	Geometric Mean Titers of Antibodies Against Vaccine Antigens Before and Following A Three Dose Primary Vaccination with Either DTacP-IPV//PRP~T Combined Vaccine (PENTAXIM™) or DTacP, Hib conjugate (Act-HIB™) and IPV (IMOVAX Polio™) Monovalent Vaccines

Secondary: Percentage of Subjects with Solicited Injection-site and Systemic Reactions Following Each Primary Vaccination with Either DTacP-IPV//PRP~T Combined Vaccine (PENTAXIM™) or DTacP, Hib conjugate (Act-HIB™) and IPV (IMOVAX Polio™) Monovalent Vaccines

End point title	Percentage of Subjects with Solicited Injection-site and Systemic Reactions Following Each Primary Vaccination with Either DTacP-IPV//PRP~T Combined Vaccine (PENTAXIM™) or DTacP, Hib conjugate (Act-HIB™) and IPV (IMOVAX Polio™) Monovalent Vaccines
-----------------	---

End point description:

Solicited injection site reactions: Tenderness, Erythema, and Swelling. Solicited systemic reactions: Fever, Vomiting, Crying abnormal, Drowsiness, Appetite lost, and Irritability.

Grade 3 solicited injection site reactions (China SFDA): Tenderness, Cries when injected limb is moved or the movement of the injected limb is reduced; Erythema and Swelling, > 3 cm. Grade 3 systemic reactions (China SFDA): Fever, > 39.0°C; Vomiting, ≥ 6 episodes per 24 hours or requiring parenteral hydration; Crying abnormal, > 3 hours; Drowsiness, Sleeping most of the time or difficult to wake up; Appetite lost, Refuses ≥ 3 feeds or refuses most feeds; Irritability, Inconsolable.

End point type	Secondary

Reporting groups

Reporting group title	Group A
-----------------------	---------

Reporting group description:

Subjects received Sanofi Pasteur's DTacP-IPV//PRP~T combined vaccine (PENTAXIM™) at 2, 3, and 4 months of age and a booster dose at 18 to 20 months of age.

Reporting group title	Group B
-----------------------	---------

Reporting group description:

Subjects received Sanofi Pasteur's DTacP-IPV//PRP~T combined vaccine (PENTAXIM™) at 3, 4, and 5 months of age and a booster dose at 18 to 20 months of age.

Reporting group title	Group C
-----------------------	---------

Reporting group description:

Subjects received the control vaccine (Wuhan's DTacP, Act-HIB™ and IMOVAX Polio™) at 3, 4, and 5 months of age and a booster dose at 18 to 20 months of age.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 May 2007	The number of planned subjects was modified and the sample labeling and storage procedures were updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
