

Clinical trial results:

A Prospective, Randomized, Double Blind Comparison of LY900014 to Humalog in Adults with Type 1 Diabetes Using Continuous Subcutaneous Insulin Infusion

Summary

EudraCT number	2015-005358-36
Trial protocol	HU DE AT FR ES IT
Global end of trial date	06 January 2020

Results information

Result version number	v1 (current)
This version publication date	20 January 2021
First version publication date	20 January 2021

Trial information

Trial identification

Sponsor protocol code	I8B-MC-ITRO
-----------------------	-------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03830281
WHO universal trial number (UTN)	-
Other trial identifiers	Trial Number: 16315

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 January 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 January 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The reason for this study is to compare the study drug LY900014 to insulin lispro (Humalog) when both are used in insulin pump therapy in adults with type 1 diabetes (T1D).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 February 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 26
Country: Number of subjects enrolled	Austria: 18
Country: Number of subjects enrolled	Hungary: 50
Country: Number of subjects enrolled	United States: 198
Country: Number of subjects enrolled	Italy: 18
Country: Number of subjects enrolled	Israel: 43
Country: Number of subjects enrolled	Australia: 32
Country: Number of subjects enrolled	France: 14
Country: Number of subjects enrolled	Germany: 37
Country: Number of subjects enrolled	Spain: 35
Worldwide total number of subjects	471
EEA total number of subjects	172

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	409
From 65 to 84 years	62
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The purpose of the lead-in period was to assess basal rates and bolus calculator settings and adjust if needed prior to randomization. Participants (Pts) were then randomized to insulin lispro (Humalog) or ultra-rapid lispro as both basal and bolus insulin and delivered bolus doses 0 to 2 minutes prior to each meal (pre-meal).

Period 1

Period 1 title	Lead-in Period (2 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Arm title	Insulin Lispro (Humalog)
-----------	--------------------------

Arm description:

Participants received individual dose of 100 units per milliliter (U/mL) insulin lispro (Humalog) by continuous subcutaneous insulin infusion (CSII); where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Arm type	Experimental
Investigational medicinal product name	Insulin Lispro
Investigational medicinal product code	LY275585
Other name	Humalog
Pharmaceutical forms	Infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received individual dose of 100 U/mL insulin lispro (Humalog) by CSII; where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Number of subjects in period 1	Insulin Lispro (Humalog)
Started	471
Completed	432
Not completed	39
Physician decision	2
Consent withdrawn by subject	29
Adverse event, non-fatal	2
Not Met Eligibility Criteria	6

Period 2

Period 2 title	Treatment Period (16 Weeks)
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Insulin Lispro (Humalog)

Arm description:

Participants received individual dose of 100 units per milliliter (U/mL) insulin lispro (Humalog) by continuous subcutaneous insulin infusion (CSII); where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Arm type	Experimental
Investigational medicinal product name	Insulin Lispro
Investigational medicinal product code	LY275585
Other name	Humalog
Pharmaceutical forms	Infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received individual dose of 100 U/mL insulin lispro (Humalog) by CSII; where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Arm title	Ultra-Rapid Lispro
------------------	--------------------

Arm description:

Participants received individual dose of 100 U/mL ultra rapid lispro by CSII; where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Arm type	Active comparator
Investigational medicinal product name	Ultra-Rapid Lispro
Investigational medicinal product code	LY900014
Other name	Insulin lispro
Pharmaceutical forms	Infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received individual dose of 100 U/mL ultra rapid lispro by CSII; where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: The Lead-in Period (Period 1) was used to assess basal rates and bolus calculator settings and adjust if needed prior to randomization. Baseline analysis population is based on all randomized participants. Participants were randomized to insulin lispro (Humalog) or ultra-rapid lispro in Period 2.

Number of subjects in period 2^[2]	Insulin Lispro (Humalog)	Ultra-Rapid Lispro
Started	217	215
Completed	205	198
Not completed	12	17
Physician decision	1	-
Consent withdrawn by subject	5	6
Adverse event, non-fatal	1	7
Sponsor Decision	1	1
Lost to follow-up	4	3

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Participants who completed lead-in period randomized to either insulin lispro (Humalog) or ultra-rapid lispro in treatment period.

Baseline characteristics

Reporting groups

Reporting group title	Insulin Lispro (Humalog)
-----------------------	--------------------------

Reporting group description:

Participants received individual dose of 100 units per milliliter (U/mL) insulin lispro (Humalog) by continuous subcutaneous insulin infusion (CSII); where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Reporting group title	Ultra-Rapid Lispro
-----------------------	--------------------

Reporting group description:

Participants received individual dose of 100 U/mL ultra rapid lispro by CSII; where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Primary: Change from Baseline in Hemoglobin A1c (HbA1c) Efficacy Estimand at Week 16

End point title	Change from Baseline in Hemoglobin A1c (HbA1c) Efficacy Estimand at Week 16
End point description: HbA1c is the glycosylated fraction of hemoglobin A. HbA1c is measured to identify average plasma glucose concentration over prolonged periods of time. Least Squares (LS) mean was determined by mixed-model repeated measures (MMRM) model with covariates: Baseline + Pooled Country + Personal continuous glucose Monitor (CGM) or Flash glucose monitor (FGM) use during study flag + Treatment + Time + Treatment*Time (Type III sum of squares). The efficacy estimand included participant data when baseline and at least one post-baseline measurement were available prior to permanent discontinuation of study drug. Analysis population included all randomized participants with baseline and at least one post-baseline HbA1c data.	
End point type	Primary
End point timeframe: Baseline, Week 16	

End point values	Insulin Lispro (Humalog)	Ultra-Rapid Lispro		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	207	191

sides	2-sided
lower limit	-0.06
upper limit	0.11

Notes:

[1] - Noninferiority margin = 0.4% for HbA1c.

Secondary: Change From Baseline in 1-hour Postprandial Glucose (PPG) During Mixed-Meal Tolerance Test (MMTT) Efficacy Estimand at Week 16

End point title	Change From Baseline in 1-hour Postprandial Glucose (PPG) During Mixed-Meal Tolerance Test (MMTT) Efficacy Estimand at Week 16
-----------------	--

End point description:

A standardized MMTT was used to characterize postprandial glucose control following administration of the study insulin. Serum glucose measured at 1-hour timepoint after the start of meal minus fasting serum glucose. Least Squares (LS) mean was determined by analysis of variance (ANCOVA) model with independent variables: Baseline + Pooled Country + Hemoglobin A1C Stratum + Personal CGM/FGM use during study Flag + Treatment (Type III sum of squares). The efficacy estimand included participant data when baseline and at least one post-baseline measurement were available prior to permanent discontinuation of study drug. Analysis population included all randomized participants with baseline and at least one post-baseline 1-hour PPG data.

Secondary: Rate of Severe Hypoglycemia at Week 16

End point title	Rate of Severe Hypoglycemia at Week 16
End point description: Severe hypoglycemia is defined as an event requiring assistance of another person to administer carbohydrate, glucagon, or other resuscitative actions. During these episodes, the participant has an altered mental status and cannot assist in his or her own care, or may be semiconscious or unconscious, or experience coma with or without seizures, and may require parenteral therapy. Rate of severe hypoglycemia events per 100 years during a defined period was calculated by total number of severe hypoglycemia episodes within the period divided by the cumulative days on treatment from all participants within a treatment group *36525. Analysis population included all randomized participants with evaluable hypoglycemic data.	
End point type	Secondary
End point timeframe: Baseline through Week 16	

End point values	Insulin Lispro (Humalog)	Ultra-Rapid Lispro		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	217	214

Statistical analyses

No statistical analyses for this end point

Secondary: Rate of Documented Symptomatic Hypoglycemia at Week 16

End point title	Rate of Documented Symptomatic Hypoglycemia at Week 16
End point description:	
Documented symptomatic hypoglycemia is an event during which typical symptoms of hypoglycemia are accompanied by blood glucose (BG) of <54 mg/dL [3.0 millimole per liter (mmol/L)]. The rate of documented symptomatic hypoglycemia was estimated by negative binomial model: number of episodes = treatment with log (treatment exposure in days/365.25) as an offset variable. Analysis population included all randomized participants with evaluable hypoglycemic data.

Secondary: Change From Baseline in 1,5-Anhydroglucitol (1,5-AG) at Week 16

End point title	Change From Baseline in 1,5-Anhydroglucitol (1,5-AG) at Week 16
End point description:	
1,5-anhydroglucitol (1,5-AG) is a marker of short-term glycemic control especially postprandial hyperglycemia. 1,5-AG accurately predicts rapid changes in glycemia and is tightly associated with glucose fluctuations and postprandial glucose. LS Mean was calculated using mixed model repeated measures (MMRM) including fixed class effects of treatment, strata (Pooled Country + Hemoglobin A1C Stratum + Personal continuous glucose Monitor (CGM) or Flash glucose monitor (FGM) use during study flag), visit, and treatment-by-visit interaction, as well as the continuous, fixed covariates of baseline value. The analysis included data collected prior to permanent discontinuation of study drug. Analysis population included all randomized participants with baseline and at least one post-baseline 1,5-AG data.

Hemoglobin A1c (HbA1c) is the glycosylated fraction of hemoglobin A. HbA1c is measured to identify average plasma glucose concentration over prolonged periods of time. Analysis population included all randomized participants with baseline and at least one post-baseline HbA1c <7% data. Missing endpoints were imputed by applying the last observation carried forward (LOCF) method to the post-baseline data.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 16

End point values	Insulin Lispro (Humalog)	Ultra-Rapid Lispro		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	207	191		
Units: Percentage of participants				
number (not applicable)	20.77	18.85		

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with at Least 1 Pump Occlusion Alarm that Leads to an Unplanned Infusion Set Change

End point title	Percentage of Participants with at Least 1 Pump Occlusion Alarm that Leads to an Unplanned Infusion Set Change
-----------------	--

End point description:

Percentage of participants with at least 1 pump occlusion alarm that leads to an unplanned infusion set change was evaluated. Analysis population included all randomized participants with baseline and at least one post-baseline value.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 20 Weeks

Adverse event reporting additional description:

All randomized participants. There are gender specific adverse events, only occurring in male or female participants. The number of participants exposed has been adjusted accordingly.

Assessment type	Systematic

Reporting groups

Reporting group title	Insulin Lispro (Humalog) Lead-in
-----------------------	----------------------------------

Reporting group description:

Participants received individual dose of 100 units per milliliter (U/mL) insulin lispro (Humalog) by continuous subcutaneous insulin infusion (CSII); where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Reporting group title	Insulin Lispro (Humalog)
-----------------------	--------------------------

Reporting group description:

Participants received individual dose of 100 U/mL insulin lispro (Humalog) by CSII; where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Reporting group title	Ultra-Rapid Lispro
-----------------------	--------------------

Reporting group description:

Participants received individual dose of 100 U/mL ultra rapid lispro by CSII; where mealtime boluses were delivered 0 to 2 minutes prior to the start of each meal, with basal infusion rates 24 hours/day, and correction boluses as necessary.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: There are gender specific adverse events, only occurring in male or female participants. The number of participants exposed has been adjusted accordingly.

Frequency threshold for reporting non-serious adverse events: 5 %
