

Clinical trial results:

Open label phase II multicenter clinical trial to evaluate safety during accelerated dose escalation of an allergoid birch pollen preparation in patients with IgE mediated allergic rhinitis or rhinoconjunctivitis with or without controlled bronchial asthma

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 August 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 February 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Evaluate the safety and tolerability of an accelerated dose escalation scheme with Allergovit birch in patients with seasonal allergic rhinitis or rhinoconjunctivitis caused by birch pollen with or without controlled bronchial asthma (acc. to the Global Initiative for Asthma [GINA] 2015).

Efficacy exploratory immunological parameters:

Evaluate the change of total specific IgG and specific IgG4 for Betula verrucosa between screening visit and final visit.

Protection of trial subjects:

The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki, and that are consistent with the International Conference on Harmonization of technical requirements for registration of pharmaceuticals for human use (ICH) guidance for Good Clinical Practice (GCP) and the applicable regulatory requirements.

Data Safety Monitoring Board (DSMB) was in place throughout the trial; DSMB consisted of 3 independent physicians, experienced in the field of allergy. The primary function of the DSMB was to ensure the subjects' safety. The DSMB team reviewed an update of the safety data from all treated subjects.

Other than routine care, no specific measures were implemented for the protection of trial subjects.

Background therapy:

Concomitant medication was defined as any medication other than the IMP that was taken during the clinical trial. All concomitant medications and procedures were reported in the eCRF, stating the indication, dosage and start and end date of therapy. Any changes in concomitant medications were documented and checked against the study inclusion and exclusion criteria.

Evidence for comparator:

Abbreviations used in this document:

AE=Adverse event

AIT=Allergen immunotherapy

DSMB=Data Safety Monitoring Board

bpm=Beats per minute

ICF=Informed consent form

IMP=Investigational medicinal product

MedDRA=Medical Dictionary for Regulatory Activities

PEF=Peak flow measurement

T=Treatment (as in T1 =Treatment visit 1, etc.)

TU=Therapeutic units

WAO=World Allergy Organization

Actual start date of recruitment	27 June 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 130
Worldwide total number of subjects	130
EEA total number of subjects	130

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	130
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Overall, 175 adult male and female subjects (18-64 y) were screened for eligibility; 130 subjects were randomised to treatment, according to the exclusion and inclusion criteria.

Pre-assignment

Screening details:

Screened and randomised to treatment, according to the exclusion and inclusion criteria.

Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Accelerated dose escalation

Arm description:

Patient randomized to accelerated dose escalation with 4 injections were treated over a period of up to 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Allergovit® Birch
Investigational medicinal product code	
Other name	Birch pollen allergoid
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The IMP is an aluminium hydroxide-adsorbed allergoid preparation of Allergovit® Birch, provided in two stock concentrations (1000 TU/mL, 10,000TU/mL); injected volume was between 0.1 and 0.6 mL (depending on the stock concentration used). The foreseen scheme could be adjusted according to the well-being of the patient and could be lower than the max dose (6000 TU).

PEF and vital signs were measured before and after each injection. The IMP was administered at the trial site, as slow, subcutaneous injection, under sterile measures, on the extensor side of the upper arm, above the elbow. After each administration of the IMP, patients remained under supervision for at least 120 min (accelerated dose escalation) and 30 min (standard dose escalation).

Accelerated dose escalation scheme every 7 days (injection number): 200 (1), 600 (2), 2000 (3), 6000 (4) TU.

Maintenance every 2 weeks after last dose: 6000 (5), 6000 (6) TU.

Arm title	Standard dose escalation
------------------	--------------------------

Arm description:

Patients randomized to standard dose escalation with 7 injections were treated for up to 15 weeks.

Arm type	Experimental
Investigational medicinal product name	Allergovit® Birch
Investigational medicinal product code	
Other name	Birch pollen allergoid
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The IMP is an aluminium hydroxide-adsorbed allergoid preparation of Allergovit® Birch, provided in two stock concentrations (1000 TU/mL, 10,000TU/mL); injected volume was between 0.1 and 0.6 mL (depending on the stock concentration used). The foreseen scheme could be adjusted according to the

well-being of the patient and could be lower than the max dose (6000 TU).

PEF and vital signs were measured before and after each injection. The IMP was administered at the trial site, as slow, subcutaneous injection, under sterile measures, on the extensor side of the upper arm, above the elbow. After each administration of the IMP, patients remained under supervision for at least 120 min (accelerated dose escalation) and 30 min (standard dose escalation).

Standard dose escalation scheme every 7 days (injection number): 100 (1), 200 (2), 400 (3), 800 (4), 1500 (5), 3000 (6), 6000 (7) TU.

Maintenance every 2 weeks after last dose: 6000 (8), 6000 (9) TU.

Number of subjects in period 1	Accelerated dose escalation	Standard dose escalation
Started	63	67
Completed	61	64
Not completed	2	3
Consent withdrawn by subject	-	1
Study visit not kept according to schedule	-	1
Adverse event, non-fatal	1	-
Lost to follow-up	1	1

Primary: 1_Treatment-emergent adverse events: causal relationship

End point title	1_Treatment-emergent adverse events: causal relationship ^[1]
End point description:	
Results shown represent the number of patients with AEs that were assessed by the investigator as related to IMP.	
When assessing the causality of an AE, the investigator had 2 options:	
<ul style="list-style-type: none">• Related to IMP• Not related to IMP	
The causality of an AE was suggested to be related, if:	
<ul style="list-style-type: none">• The AE occurred in a causal temporal relationship to IMP administration• The localization of the AE implied a causal relationship to IMP administration	
The results shown below reflect the number of patients and the numbers of AEs assessed by the investigator as related to the IMP.	
End point type	Primary
End point timeframe:	
Between the signature date of the ICF and the final visit, until approx. 30 days after the last IMP administration; up to 12 wks for patients in accelerated dose escalation and up to 15 wks for patients in standard dose escalation.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This was a safety and tolerability trial. Thus, no hypotheses for the final analysis were formulated and the data were analyzed descriptively. This is in line with the ICH E9 guideline.

End point title	3_Treatment-emergent adverse event anaphylactic systemic reactions according to WAO
-----------------	-------------------------------------------------------------------------------------

End point description:

An AE was defined as a systemic reaction, if the type of event in the AE section of the eCRF was assessed as "anaphylactic reaction acc. WAO grade" and the WAO grade was documented as '1', '2', '3', '4', or '5'.

Anaphylactic reactions are graded based on organ systems involved and severity according to the WAO Subcutaneous Immunotherapy Systemic Reaction Grading System. The WAO grading of anaphylactic reactions included in this trial is a modified WAO grading.

The results shown below reflect the number of patients and the numbers of AEs, assessed by the investigator as treatment-emergent AEs (anaphylactic systemic reactions) according to WAO.

Secondary: 4_Lung function test: PEF

End point title	4_Lung function test: PEF
-----------------	---------------------------

End point description:

PEF measurements were performed as part of safety measures. The visit and the injection were rescheduled if a patient did not demonstrate PEF of $\geq 70\%$ of predicted normal prior to the injection.

PEF was determined at all study visits as follows.

Accelerated dose escalation scheme: before, and 15, 30, 60, 120 min after injection

Standard dose escalation scheme: before, and 15, 30 min after injection

PEF results were similar at all study visits in both groups.

Results shown below are representative for the study visits: first injection day (T1) before, end of injection (after 30 min standard or after 120 min accelerated dose escalation phase); last injection day (T9 Standard dose and T9 accelerated dose, before and after 30 min standard and before or after 120 min accelerated dose escalation phase).

The mean and median PEF results were similar between the treatment groups at all the time points.

The number of patients contributing to the data at each data point is shown.

End point type	Secondary
----------------	-----------

End point timeframe:

PEF was measured at the screening visit, during treatment, any additional visits, and final visit, at times specified below under the heading 'Description'.

-----------------------	-----------------------------

Reporting group description:

Patient randomized to accelerated dose escalation with 4 injections were treated over a period of up to 12 weeks.

AEs with onset during or after 1st administration of trial medication were defined as treatment-emergent.

Reporting group title	Standard dose escalation
-----------------------	--------------------------

Reporting group description:

Patients randomized to standard dose escalation with 7 injections were treated for up to 15 weeks.

AEs with onset during or after 1st administration of trial medication were defined as treatment-emergent.

Serious adverse events	Accelerated dose escalation	Standard dose escalation	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 63 (0.00%)	0 / 67 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events			

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Accelerated dose escalation	Standard dose escalation	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	51 / 63 (80.95%)	53 / 67 (79.10%)	
Nervous system disorders			
Headache			
subjects affected / exposed	19 / 63 (30.16%)	19 / 67 (28.36%)	
occurrences (all)	37	39	
General disorders and administration site conditions			

Injection site erythema subjects affected / exposed occurrences (all)	23 / 63 (36.51%) 67	18 / 67 (26.87%) 37	
Injection site pain subjects affected / exposed occurrences (all)	8 / 63 (12.70%) 12	6 / 67 (8.96%) 6	
Injection site pruritus subjects affected / exposed occurrences (all)	17 / 63 (26.98%) 59	20 / 67 (29.85%) 51	
Injection site swelling subjects affected / exposed occurrences (all)	27 / 63 (42.86%) 79	23 / 67 (34.33%) 59	
Injection site warmth subjects affected / exposed occurrences (all)	3 / 63 (4.76%) 7	7 / 67 (10.45%) 9	
Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all)	3 / 63 (4.76%) 3	2 / 67 (2.99%) 2	
Oropharyngeal pain subjects affected / exposed occurrences (all)	6 / 63 (9.52%) 9	6 / 67 (8.96%) 7	
Musculoskeletal and connective tissue disorders Back pain subjects affected / exposed occurrences (all)	0 / 63 (0.00%) 0	4 / 67 (5.97%) 4	
Infections and infestations Nasopharyngitis subjects affected / exposed occurrences (all)	22 / 63 (34.92%) 26	21 / 67 (31.34%) 27	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 December 2016	<p>In the protocol version final 1.0 dated 15th January 2016; two trial parts were originally planned.</p> <p>During the first trial part from May 2016 – December 2016 adult patients were planned to be enrolled. In December 2016, an interim analysis of the data obtained within in the dose escalation phase of the first trial part had been planned. It should have been decided, whether the second trial part enrolling additional adults and also adolescents or children could be performed. The sponsor decided to waive then 2nd trial part in adolescents and children due to changes in the product strategy, despite no safety concerns obtained from the first part of the study. The protocol was amended accordingly, describing the trial conduct in adults only.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
