Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 April 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This study determined the recommended phase 2 dose (RP2D) of MK-8628 (formerly known as OTX015) for further studies in participants with advanced nuclear protein in testis (NUT) midline carcinoma (NMC), triple negative breast cancer (TNBC), non-small cell lung cancer (NSCLC), or castration-resistant prostate cancer (CRPC). This was a 2 part study: Part A was a dose-escalation study and established the RP2D by evaluating dose limiting toxicity (DLT), safety, discontinuation, and early efficacy. Part B was to enroll participants with NMC only and evaluate safety and efficacy. The sponsor decided to terminate the program after the dose levels tested in Part A due to limited efficacy signals and not due to safety-related concerns. No participants entered or were treated in Part B of the study.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	Switzerland: 2
Country: Number of subjects enrolled	United States: 3
Worldwide total number of subjects	13
EEA total number of subjects	7

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	2
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a Phase I, multi-center, open-label, dose-escalating study in participants with advanced or metastatic NSCLC, TNBC, CRPC, or NMC for which standard therapy either does not exist, has proven ineffective, intolerable, or unacceptable.

Pre-assignment

Screening details:

Participants with CRPC, NMC, and TNBC were enrolled in the study; no participants with NSCLC were enrolled. All participants had a Eastern Cooperative Oncology Group (ECOG) Performance Status (PS) score of ≤ 1 and 76.9% of participants had 2 or more prior lines of therapy. No participants were enrolled in Part B of the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	MK-8628 20 mg CRPC Cohort-Part A

Arm description:

Participants in the CRPC cohort in Part A of the study received MK-8628 20 mg PO, BID, in a fasted state for 21 consecutive days per cycle. Participants received MK-8628 in continuous cycles up to 24 months.

Arm type	Experimental
Investigational medicinal product name	MK-8628
Investigational medicinal product code	
Other name	OTX015
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Administered PO, BID, in a fasted state, for 21 consecutive days per cycle and administered in consecutive cycles for up to 24 months

Arm title	MK-8628 20 mg NMC Cohort-Part A
------------------	---------------------------------

Arm description:

Participants in the NMC cohort in Part A of the study received MK-8628 20 mg PO, BID, in a fasted state for 21 consecutive days per cycle. Participants received MK-8628 in continuous cycles up to 24 months.

Arm type	Experimental
Investigational medicinal product name	MK-8628
Investigational medicinal product code	
Other name	OTX015
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Administered PO, BID, in a fasted state, for 21 consecutive days per cycle and administered in consecutive cycles for up to 24 months

Arm title	MK-8628 20 mg TNBC Cohort-Part A
------------------	----------------------------------

Arm description:

Participants in the TNBC cohort in Part A of the study received MK-8628 20 mg PO, BID, in a fasted state for 21 consecutive days per cycle. Participants received MK-8628 in continuous cycles up to 24 months.

Subject analysis set description: Participants in TNBC Cohort in Part A of the study that received at least 1 dose of MK-8628 20 mg PO, BID, in a fasted state. No participants were enrolled in Part B of the study.	

Primary: Number of Participants Who Experienced a Dose Limiting Toxicity (DLT) During Cycle 1

End point title	Number of Participants Who Experienced a Dose Limiting Toxicity (DLT) During Cycle 1
End point description: A DLT was any of the following deemed drug related (DR) by investigator: Grade (G)4 hematologic toxicity lasting ≥ 7 days except thrombocytopenia; G4 thrombocytopenia; G3 thrombocytopenia with bleeding; G3 or 4 febrile neutropenia. G4 non-hematologic (NH) toxicity (not laboratory); G3 NH toxicity (not laboratory), nausea, vomiting, or diarrhea lasting >3 days despite supportive care; G3 or 4 NH laboratory abnormality requiring medical intervention, hospitalization, or persisting >1 week; alanine aminotransferase (ALT) or aspartate aminotransferase (AST) $>8\times$ Upper Limit of Normal(ULN); ALT or AST $>5\times$ ULN for >2 weeks; ALT or AST $>3\times$ ULN and total bilirubin $>2\times$ ULN or international normalization ratio >1.5 ; ALT or AST $>3\times$ ULN with fatigue, nausea, vomiting, right upper quadrant pain or tenderness, fever, rash and/or eosinophilia ($>5\%$); DR adverse event leading to discontinuation or $>20\%$ missed planned doses in Cycle 1; DR toxicity causing >2 week delay in starting Cycle 2; or G5 toxicity.	
End point type	Primary

lower limit	0.121
upper limit	0.418

Secondary: Number of Participants Who Experienced at Least One Adverse Event (AE)

End point title	Number of Participants Who Experienced at Least One Adverse Event (AE)
End point description: An AE was defined as any untoward medical occurrence in a participant administered a pharmaceutical product and which did not necessarily have to have a causal relationship with this treatment. An AE could therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product/protocol-specified procedure, whether or not considered related to the medicinal product/protocol-specified procedure. Any worsening of a preexisting condition temporally associated with the use of the product was also an AE. The number of participants who experienced at least one AE is presented.	
End point type	Secondary

Number of subjects analysed	9	3	1	
Units: Participants	0	0	0	

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)
End point description: For participants who demonstrated CR or PR, DOR was defined as the time from first documented evidence of CR or PR per RECIST 1.1 until disease progression per RECIST 1.1 and PCWG2 or death due	

to any cause, whichever occurred first. Per RECIST 1.1, progressive disease was defined as at least a 20% increase in the sum of diameters of target lesions. In addition to the relative increase of 20%, the sum must also have demonstrated an absolute increase of at least 5 mm. Note: The appearance of one or more new lesions was also considered progression per RECIST 1.1. Per PCWG2, progressive disease was defined as a confirmed increase of at least two new lesions on a bone scan. DOR assessments were assessed by investigator radiologic review. The DOR for all participants who experienced a CR or PR is presented. Since no participants experienced a CR or PR, DOR could not be calculated.

End point type	Secondary
End point timeframe:	
Assessed every 6 weeks from time of first dose until disease progression (up to 24 months)

[3] - No participants had a response of CR or PR.

Statistical analyses

No statistical analyses for this end point

Secondary: Disease Control Rate (DCR)

End point title	Disease Control Rate (DCR)
End point description:	
DCR was defined as the number of subjects with CR, PR, or stable disease (SD) as assessed by investigator radiologic review according to RECIST version 1.1 and PCWG2. CR: defined as disappearance of all target and all non-target lesions and any pathological lymph nodes (whether target or non-target) must have reduction in short axis to less than <10 mm per RECIST 1.1. PR: defined as at least a 30% decrease in sum of diameters of target lesions, taking as reference the baseline sum diameters along with absence of new lesions and disease progression in non-target lesions per RECIST 1.1. SD: defined as, neither sufficient shrinkage to qualify for PR, nor sufficient increase to qualify for PD, taking as reference the smallest sum diameters while on study per RECIST 1.1 and lack of a confirmed increase of at least two new lesions on a bone scan per PCWG2. The number of participants who experienced DCR is presented.	
End point type	Secondary
End point timeframe:	
Assessed every 6 weeks from time of first dose until disease progression (up to 24 months)

Cycle1/Day 1: predose, 20 minutes, 1 hour, 2.25 hours (hrs), 3.25 hrs, 8 hrs, and 12 hrs postdose

End point values	MK-8628 20 mg-PK Cohort			
Subject group type	Subject analysis set			
Number of subjects analysed	8			
Units: Liters				
arithmetic mean (standard deviation)	55.0 (± 15.3)			

Statistical analyses

No statistical analyses for this end point

Secondary: Area Under the Concentration-time Curve of MK-8628 From Time 0 to Infinity (AUC 0-∞)

End point title	Area Under the Concentration-time Curve of MK-8628 From Time 0 to Infinity (AUC 0-∞)
-----------------	--

End point description:

Blood samples were obtained at specified time points for the PK analysis of AUC 0-∞ of MK-8628. MK-8628 concentrations were analyzed using ultra-performance liquid chromatography coupled with a tandem mass spectrometry. The AUC 0-∞ of MK-8628 after oral administration is presented. Due to limited PK sampling for t_{1/2}, caution must be exercised when interpreting the results of t_{1/2}, CL/F, and AUC 0-∞ values.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From time of first dose until the end of the 30-day follow-up (up to 25 months)

Adverse event reporting additional description:

The safety population consisted of all participants who received at least one dose of study treatment.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 November 2016	Amendment 01: Primary reason for amendment was to incorporate revisions to the eligibility criteria to update the requirement for contraception.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study was terminated 16-Dec-2016 because limited efficacy was detected. The study was not terminated due to safety reasons.
--

Notes:
