Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 April 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 October 2018
Global end of trial reached?	Yes
Global end of trial date	08 October 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To achieve an increase of individual trough plasminogen activity by at least an absolute 10% (i.e., 10 U/dL) from baseline during the 12 weeks of plasminogen replacement therapy in Segment 2; and to evaluate the efficacy of plasminogen replacement therapy on clinically evident or visible symptoms of hypoplasminogenia during the 48 weeks of dosing in Segments 2 and 3.

Protection of trial subjects:

A Safety Monitoring Committee (SMC) composed of the sponsor's Medical Monitor and an independent Medical Monitor reviewed study safety data biweekly during Segments 1 and 2, and periodically during Segment 3.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 3
Country: Number of subjects enrolled	United States: 12
Worldwide total number of subjects	15
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	4
Adolescents (12-17 years)	2
Adults (18-64 years)	9
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 2 sites, 1 in the United States (US) and 1 in Norway. The first participant was screened in May 2016 and the last participant visit was in October 2018.

Pre-assignment

Screening details:

Subjects were screened for study eligibility within a period of no more than 21 days before the start of dosing.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Plasminogen (Human) Intravenous
-----------	---------------------------------

Arm description:

6.6 mg/kg Plasminogen (Human) Intravenous given every 2 to 4 days by a 10- to 30- minute intravenous infusion

Arm type	Experimental
Investigational medicinal product name	Ryplazim
Investigational medicinal product code	
Other name	Plasminogen (Human)
Pharmaceutical forms	Suspension for injection
Routes of administration	Intravenous use

Dosage and administration details:

6.6 mg/kg given as a single dose in segment 1, and repeat doses in Segments 2 and 3

Number of subjects in period 1	Plasminogen (Human) Intravenous
Started	15
Segment 1	9 ^[1]
Segment 2	15
Segment 3	15
Segment 3 (Wk 48 - Completed)	15
Post Week-48	12
Completed	10
Not completed	5
Consent withdrawn by subject	1
Physician decision	1
Norway participants did not continue on post Wk48	3

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Six participants skipped Segment 1 as they had PK data from Phase 1 study 2002C005G (allowed per protocol).

Baseline characteristics

Reporting groups

Reporting group title	Plasminogen (Human) Intravenous
-----------------------	---------------------------------

Reporting group description:

6.6 mg/kg Plasminogen (Human) Intravenous given every 2 to 4 days by a 10- to 30- minute intravenous infusion

Reporting group values	Plasminogen (Human) Intravenous	Total	
Number of subjects	15	15	
Age categorical			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	4	4	
Adolescents (12-17 years)	2	2	
Adults (18-64 years)	9	9	
From 65-84 years	0	0	
85 years and over	0	0	
Age continuous			
Units: years			
arithmetic mean	23.0		
standard deviation	± 13.05	-	
Gender categorical			
Units: Subjects			
Female	11	11	
Male	4	4	
Race (NIH/OMB)			
Units: Subjects			
White	15	15	
Race/Ethnicity, Customised			
Units: Subjects			
Hispanic/Latino	1	1	
Non-Hispanic/Latino	14	14	
Region of Enrollment

United States	12	12	
Norway	3	3	
Visible and Non-Visible Lesions by Participant			
Units: Subjects			
None	4	4	
> = 1 Visible or non-visible lesion	11	11	
Plasminogen Activity			
Units: Subjects			

Plasminogen activity <5-10%	3	3	
Plasminogen activity 11-20%	4	4	
Plasminogen activity 21-30%	6	6	
Plasminogen activity 31-40%	1	1	
Plasminogen activity 41-45%	1	1	
Plasminogen activity >45%	0	0	
Plasminogen antigen Units: Subjects			
Plasminogen antigen <0.5-3.0 mg/dL	4	4	
Plasminogen antigen 3.1-6.0 mg/dL	10	10	
Plasminogen antigen 6.1-2.0 mg/dL	1	1	
Plasminogen antigen >20.0 mg/dL	0	0	
Quality of Life Assessment			
For the Quality of Life (QOL) assessment, participants were asked to rate their overall QOL using an 11-point scale (0 = Non functioning, 10 = normal);the QOL scale was adapted from a scale developed by the American Chronic Pain Association			
Units: Subjects			
QOL score = 0	0	0	
QOL score = 1	0	0	
QOL score = 2	0	0	
QOL score = 3	0	0	
QOL score = 4	0	0	
QOL score = 5	0	0	
QOL score = 6	1	1	
QOL score = 7	3	3	
QOL score = 8	1	1	
QOL score = 9	1	1	
QOL score = 10	9	9	
Weight Units: kilogram(s)			
arithmetic mean	60.37		
standard deviation	± 26.803	-	
Plasminogen Activity			
Plasminogen % activity is a measurement of functional plasminogen levels.			
Units: percent			
arithmetic mean	21.1		
standard deviation	± 10.83	-	
Plasminogen antigen Units: mg/dL			
arithmetic mean	4.7		
standard deviation	± 3.7	-	

End points

End points reporting groups

Reporting group title	Plasminogen (Human) Intravenous
Reporting group description:	
6.6 mg/kg Plasminogen (Human) Intravenous given every 2 to 4 days by a 10- to 30- minute intravenous infusion	

Primary: Overall Clinical Success in Number and Size of Lesions as Measured by Photographic or Other Imaging Modality Depending on the Organ System Affected or Change in Affected Organ Functionality at 48 Weeks

End point title	Overall Clinical Success in Number and Size of Lesions as Measured by Photographic or Other Imaging Modality Depending on the Organ System Affected or Change in Affected Organ Functionality at 48 Weeks ^[1]
-----------------	--

End point description:

Overall clinical success was defined as 50% of participants with visible or other measurable lesions achieving at least a 50% improvement in lesion number/size or functionality impact from baseline. Visible lesions were defined as dimensions could have been assessed by medical imaging studies (eg, computed tomography, magnetic resonance imaging, ultrasound, etc) or functional assessments (eg, spirometry, audiogram, oximetry, etc.). Visible lesions that had both a length and width as measured by the 1mm scale, were referred to as "measurable lesions", and visible lesions that were too small to measure by the 1mm scale (length and/or width could not have been measured) were referred to as "non-measurable lesions".

End point type	Primary
----------------	---------

End point timeframe:

48 Weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Given the ultra-rarity of the disease and study design, all data were presented descriptively.

End point values	Plasminogen (Human) Intravenous			
Subject group type	Reporting group			
Number of subjects analysed	15 ^[2]			
Units: Lesions				
Number of lesions analysed at baseline	47			
Visible lesions at baseline	32			
Non-Visible lesions at baseline	15			
Total Visible/Non-Visible lesions resolved Wk 48	34			
Total Visible/Non-Visible lesions improved Wk 48	10			
Not applicable (not assessed) Wk 48	3			

Notes:

[2] - All 15 participants were assessed, but only 11 had visible and/or non-visible lesions at baseline.

Statistical analyses

No statistical analyses for this end point

Primary: Number and Percentage of Participants Who Achieved the Target Plasminogen Activity Trough Levels for at Least 3 Measurements in 12 weeks During Segment 2

End point title	Number and Percentage of Participants Who Achieved the Target Plasminogen Activity Trough Levels for at Least 3 Measurements in 12 weeks During Segment 2 ^[3]
-----------------	--

End point description:

Plasminogen activity is a measurement of functional plasminogen levels and is therefore the most accurate and specific method to quantify active Plasminogen (Human) Intravenous concentration in participant's plasma. Primary endpoint success was defined as at least 80% of evaluable participants (ie, 8 or more) achieving the target trough levels for at least 3 measurements in 12 weeks. The target trough level was defined as an increase in plasminogen activity level of at least an absolute 10% (10 U/dL) from the participants individual baseline level.

End point type	Primary
----------------	---------

End point timeframe:

12 Weeks

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Given the ultra-rarity of the disease and study design, all data were presented descriptively.

End point values	Plasminogen (Human) Intravenous

Secondary: Overall Clinical Success in Number and Size of Lesions as Measured by Photographic or Other Imaging Modality Depending on the Organ System Affected of Change in Affected Organ Functionality at 12 Weeks

End point title	Overall Clinical Success in Number and Size of Lesions as Measured by Photographic or Other Imaging Modality Depending on the Organ System Affected of Change in Affected Organ Functionality at 12 Weeks
-----------------	---

End point description:

Overall clinical success was defined as 50% of participants with visible of other measurable lesions achieving at least a 50% improvement in lesion number/size of functionality impact from baseline. Visible lesions were defined as lesions that could be imaged and analysed with digital photography. Non-visible lesions were defined as lesions whose dimensions could have been assessed by medical imaging studies (eg, computed tomography, magnetic resonance imaging, ultrasound, etc) or functional assessments (eg, spirometry, audiogram, oximetry, etc). Visible lesions that were too small to measure by the 1mm scale (length and/or width could not have been measured) were referred to as "non-measurable lesions".

End point type	Secondary

End point timeframe:

First dose and 12 weeks

End point values	Plasminogen (Human) Intravenous			
Subject group type	Reporting group			
Number of subjects analysed	15			
Units: mL/kg				
arithmetic mean (standard deviation)				
Mean (SD) Vss of plasminogen after first dose	63.3 (± 11.44)			
Mean (SD) Vss of plasminogen at Week 12	49.3 (± 10.36)			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Safety was assessed during the treatment period (up to 124 weeks) and a 30-day post-treatment period

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study drug treatment.

Assessment type	Systematic

Reporting groups

Reporting group title	Plasminogen (Human) Intravenous
-----------------------	---------------------------------

Reporting group description:

6.6 mg/kg Plasminogen (Human) Intravenous given every 2 to 4 days by a 10- to 30- minute intravenous infusion

Serious adverse events	Plasminogen (Human) Intravenous		
Total subjects affected by serious adverse events			
subjects affected / exposed	3 / 15 (20.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events			
Surgical and medical procedures			
Ear operation			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Ossiculoplasty			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Gastrointestinal disorders			
Ileus			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Infections and infestations			

Pneumonia			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Plasminogen (Human) Intravenous		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	15 / 15 (100.00%)		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Cholesteatoma			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Skin papilloma			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	2		
Vascular disorders			
Haematoma			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Flushing			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Orthostatic hypotension			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Haemorrhage			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	6		
Surgical and medical procedures			
Artificial crown procedure			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	2		
Venipuncture			

subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Central venous catheter removal			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Tooth repair			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Wisdom teeth removal			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
General disorders and administration site conditions			
Asthenia			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	3		
Chest discomfort			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	2		
Chills			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	2		
Feeling abnormal			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Fatigue			
subjects affected / exposed	3 / 15 (20.00%)		
occurrences (all)	4		
Influenza like illness			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	2		
Infusion site erythema			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	2		
Infusion site discomfort			

subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Infusion site bruising			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Infusion site rash			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Infusion site pain			
subjects affected / exposed	4 / 15 (26.67%)		
occurrences (all)	5		
Infusion site extravasation			
subjects affected / exposed	4 / 15 (26.67%)		
occurrences (all)	11		
Infusion site swelling			
subjects affected / exposed	4 / 15 (26.67%)		
occurrences (all)	11		
Pain			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Peripheral swelling			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	6		
Pyrexia			
subjects affected / exposed	6 / 15 (40.00%)		
occurrences (all)	13		
Immune system disorders			
Seasonal allergy			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	3		
Reproductive system and breast disorders			
Dysmenorrhoea			
subjects affected / exposed	2 / 15 (13.33%)		
occurrences (all)	2		
Ovulation pain			

subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	4		
Uterine pain			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Pelvic pain			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	2		
Vulvovaginal pain			
subjects affected / exposed	1 / 15 (6.67%)		
occurrences (all)	1		
Vaginal haemorrhage

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 April 2016	<ul style="list-style-type: none">- Change to PK sampling time at 96 hours post-dose for PK profile- Option of every fourth day dosing interval, according to the PK profile- Peak expiratory flow (PEF) added as an indicator of lung functionality tests- A definition of primary endpoint success added- Description of CGI scale updated- Description of the quality-of-life scale updated <p>Additional administrative corrections and clarifications.</p>
13 June 2016	<ul style="list-style-type: none">- Added 1 primary and 1 secondary objective- Modified the secondary endpoint to reflect 48 weeks of duration- Added 3 subjects to the total number of subjects in order to increase the number of subjects with potentially measurable or visible lesions- Added a specified duration of treatment for Segment 3 in Norway and clarified that only subjects in the US will receive at home administration of IMP- Added a maximum dose adjustment algorithm in the event that a subject does not have a complete clinical response- Change made to allow for flexibility in the selection of the clinical specialty laboratory and added retention samples for plasminogen activity and antigen levels to allow for repeat testing if requested- Added retention samples for plasminogen antibodies to allow for repeat testing if requested- Added graded evaluation of clinical responses to provide additional details to the efficacy analysis <p>Additional administrative clarifications and corrections.</p>
03 November 2016	<ul style="list-style-type: none">- Remove US specific wording to allow subjects in Norway to receive at home administration of IMP during Segment 3- The duration window of the Plasminogen IV infusion was expanded to 10 to 30 minutes based on the actual experience of the subjects- The results of the Phase 1 study were updated to reflect the current findings from the study- Visit windows extended for Segment 3 visits and added for Safety Follow-up, 30 days post final dose, to allow flexibility in scheduling visits- The requirement for chest X-ray at Week 12 was revised to "at the investigator's discretion" as this test was only relevant for subjects who had lesions with respiratory involvement <p>Additional administrative clarifications and corrections.</p>
19 December 2016	<ul style="list-style-type: none">- The requirement for chest X-ray at baseline was revised to "at the investigator's discretion" as this test was only relevant for subjects who had lesions with respiratory involvement- Added that Clinical Global Impression and Quality of life assessment will be performed at the Week 48 Visit only in Segment 3 <p>Additional administrative clarifications and corrections.</p>

08 August 2018	<ul style="list-style-type: none"> - IMP vial concentration has been revised from 5.0 mg/mL to 5.5 mg/mL to reflect the true concentration and dosing - Subject dosing was revised from 6.0 mg/kg to 6.6 mg/kg of plasminogen to reflect the true concentration and dosing - Due to delay in market approval, subjects at the United States site will be given the option to enroll in Treatment Protocol 2002C018G without interrupting treatment - Clinical experience with Plasminogen has been revised to include most recent data - Revision was implemented to add an End of Study visit for Subjects at the US Site Only who decide to enter Treatment Protocol 2002C018G and related assessments -Subjects' infusions window for both Segment 2 and Segment 3 has been specified as +/- 1 day per Addendum dated 28Apr2017 - No backup sample for Plasminogen activity and antigen/antibody testing is needed at the End of Study visit for subjects who decide to enter the treatment protocol - Text updated to indicate that subjects will return the diary at the End of Study visit or Safety Follow-Up visit - Plasminogen administration procedures were updated per Addendum dated 24May2017. In June 2017, Prometic Biotherapeutics started using the 5 µM B.Braun disk filters instead of the MINSART 1.2 µM Syringe Filters <p>Additional administrative clarifications and corrections.</p>
