Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 December 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 December 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To determine the percentage of chronic HBV patients achieving a 1-log reduction in HBsAg compared to baseline (mean of pre-dose values) at Week 60 after completion of 48 weeks of ARC-520

Protection of trial subjects:

Subjects were advised that they were free to withdraw from the study at any time for any reason or, if necessary, the Principal Investigator, or medically trained designee, may have withdrawn a subject from the study, according to the following protocol specified criteria, to protect the subject's health:

- the need to take medication which may have interfered with study measurements;
- intolerable/unacceptable adverse experiences;
- major violation or deviation of study protocol procedures;
- non-compliance of subject with protocol;
- subject unwilling to proceed and/or consent was withdrawn; or
- withdrawal from the study if, in the Principal Investigator's judgment, it was in the subject's best interest.

Background therapy:

The patients were also required to take concomitant medications (0.5 mg once daily entecavir OR 300 mg once daily tenofovir [Cohorts 2-6]; 180 mcg pegylated interferon-alpha [PEG-IFN α ; Cohorts 2-7]). Cohorts 1 and 8 were not required to take any concomitant medication and received ARC-520 Injection as monotherapy. The treatment period for entecavir/tenofovir started concurrently with ARC-520 Injection dosing and was scheduled for 60 weeks. This could be extended if so considered by the assessing investigator however all treatment was to stop once seroconversion was achieved.

The PEG-IFN α start was delayed and started at Day 87 for Cohorts 2-6 or Day 15 for Cohort 7, of treatment. PEG-IFN α treatment was scheduled for 48 weeks. PEG-IFN α was administered weekly as per protocol and any dose reductions were made based on locally approved PEG-IFN α label instructions.

All subjects were pre-treated with an oral antihistamine selected by the investigator from the list of approved antihistamines that is available in that country. Acceptable antihistamines were: diphenhydramine 50 mg p.o., chlorpheniramine 8 mg p.o., hydroxyzine 50 mg p.o., or cetirizine 10 mg p.o.

Evidence for comparator: -

Actual start date of recruitment	09 December 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 15
Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	New Zealand: 13
Country: Number of subjects enrolled	Moldova, Republic of: 15

Country: Number of subjects enrolled	Thailand: 25
Country: Number of subjects enrolled	Korea, Republic of: 1
Worldwide total number of subjects	79
EEA total number of subjects	15

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	79
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study included up to 60 days of screening period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1

Arm description:

Treatment-naïve, hepatitis B "e" antigen (HBeAg)-positive subjects with chronic hepatitis B (CHB) of any genotype administered ARC-520 (2 mg/kg intravenous [IV]) every 4 weeks for 48 weeks (13 doses).

Arm type	Experimental
Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.

Arm title	Cohort 2
------------------	----------

Arm description:

Treatment-naïve, HBeAg-positive, Genotype B subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered peginterferon (PEG IFN) alpha 2a for 48 weeks starting Day 87.

Arm type	Experimental
Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.

Arm title	Cohort 3
------------------	----------

Arm description:

Treatment-naïve, HBeAg-negative, Genotype B subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use
Dosage and administration details:	
ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.	
Arm title	Cohort 4
Arm description:	
Treatment-naïve, HBeAg-positive, Genotype C subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.	
Arm type	Experimental
Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use
Dosage and administration details:	
ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.	
Arm title	Cohort 5
Arm description:	
Treatment-naïve, HBeAg-negative, Genotype C subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.	
Arm type	Experimental
Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use
Dosage and administration details:	
ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.	
Arm title	Cohort 6
Arm description:	
Treatment-naïve, HBeAg-negative, Genotype D subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.	
Arm type	Experimental
Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use
Dosage and administration details:	
ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.	
Arm title	Cohort 7

Arm description:

Treatment-naïve, HBeAg-negative or HBeAg-positive subjects with hepatitis delta virus (HDV) administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 15.

Arm type	Experimental
Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.

Arm title	Cohort 8
------------------	----------

Arm description:

Treatment-naïve, HBeAg-positive subjects with CHB of any genotype administered ARC-520 (4 mg/kg IV) every 4 weeks for 48 weeks (13 doses).

Arm type	Experimental
Investigational medicinal product name	ARC-520 Injection
Investigational medicinal product code	ARC-520
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

ARC-520 was administered intravenously concomitantly with 0.9% normal saline using an infusion rate of 0.4 mL/min for ARC-520 and 200 cc/hour for normal saline.

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and Serious TEAEs Considered Possibly or Probably Related to Treatment

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and Serious TEAEs Considered Possibly or Probably Related to Treatment
-----------------	--

End point description:

The Principal Investigator (or medically qualified designee) will use clinical judgment to determine the relationship. An adverse event (AE) was considered "possibly related" when there is a reasonable possibility that the incident, experience, or outcome may have been caused by the product under investigation. An AE was considered "probably related" when there are facts, evidence, or arguments to suggest that the event is related to the product under investigation. Only AEs that occurred post-dose were considered treatment-emergent. Clinically significant abnormal laboratory findings or other abnormal assessments that are detected during the study or are present at baseline and significantly worsen following the start of the study will be reported as AEs.

Reporting groups

Reporting group title	Cohort 1
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-positive subjects with CHB of any genotype administered ARC-520 (2 mg/kg IV) every 4 weeks for 48 weeks (13 doses).

Reporting group title	Cohort 2
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-positive, Genotype B subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.

Reporting group title	Cohort 3
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-negative, Genotype B subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.

Reporting group title	Cohort 4
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-positive, Genotype C subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.

Reporting group title	Cohort 5
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-negative, Genotype C subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.

Reporting group title	Cohort 6
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-negative, Genotype D subjects with CHB administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) concomitantly with daily orally administered ETV or TDF for approximately 60 weeks starting Day 1 and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 87.

Reporting group title	Cohort 7
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-negative or HBeAg-positive subjects with HDV administered ARC-520 (2 mg/kg increasing to 4 mg/kg or 4 mg/kg IV) every 4 weeks for 48 weeks (13 doses) and weekly subcutaneously administered PEG IFN alpha 2a for 48 weeks starting Day 15.

Reporting group title	Cohort 8
-----------------------	----------

Reporting group description:

Treatment-naïve, HBeAg-positive subjects with CHB of any genotype administered ARC-520 (4 mg/kg IV) every 4 weeks for 48 weeks (13 doses).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 September 2015	<ol style="list-style-type: none">1. Modify Schedule of Assessments to collect Quantitative and qualitative anti-HBs, qualitative anti-Hbe, and HbsAg epitope mapping Baseline samples at the Day 1 visit for all enrolled patients.2. Correction of administrative, grammatical, formatting errors, and inconsistencies.
20 November 2015	<ol style="list-style-type: none">1. Addition of Cohort 7 (Treatment naïve HBeAg negative or HBeAg positive Hepatitis Delta Virus (HDV) patients administered ARC-520 (2 mg/kg IV) every 4 weeks for 48 weeks concomitantly with PEG IFN alpha 2a and Cohort 8 (Treatment naïve, HBeAg positive, Chronic Hepatitis B (CHB) patients of any genotype administered ARC-520 (4 mg/kg IV) every 4 weeks for 48 weeks). HDV infection requires HBsAg present in chronic HBV infection. Therefore, targeting HBV and specifically HBsAg with ARC-520 may prove therapeutic for HDV. Cohort 8 utilizes a 4 mg/kg dose, which has been extensively studied as a single dose treatment in HBeAg negative and HBeAg positive patients in the HeparC-2001 study. The addition of this cohort is intended to compare monotherapy response between low dose (Cohort 1, 2 mg/kg) and high dose (Cohort 9, 4 mg/kg).2. Expansion of the study to addition Asia/Pacific and European countries.3. Correction of administrative, grammatical, formatting errors, and inconsistencies.
22 January 2016	<ol style="list-style-type: none">1. Addition of Tenofovir (TDF) as an alternative to Entecavir (ETV) for treatments used in Cohorts 2-6. This addition is intended to provide an appropriate NUC alternative if entecavir is not available.2. Removal of Cetirizine 10 mg p.o. as an acceptable antihistamine. Sponsor prefers use of antihistamines that are less H1 receptor selective.3. Changes made to the Exclusion Criteria in protocol version 2.0 (20 November 2015):<ol style="list-style-type: none">a. Exclusion criterion #3 modified to allow for enrollment of patients with recent minor infections.b. Exclusion criterion #22 was removed as the exclusion of subjects with these conditions is covered by other exclusion criteria.c. Exclusion criterion #25 modified for clarity.d. Exclusion criterion #29 removed as Sponsor has found no reason why fever alone within 2 weeks of screening should exclude a subject.4. Cytokines will now be drawn and evaluated for all patients at the pre-dose blood draw regardless of evidence of ALT flares. Sponsor recently presented data at Hepdart in December 2015 showing that 7 of 9 chimps, all being treated with ARC-520 showed signs of cytokine induction. This was seen in the presence of declining HBV viral antigens and ALT flare was not routinely present. Thus, ALT flare may not be necessary to see signs of immune reconstitution in humans.5. Correction of administrative, grammatical, formatting errors, and inconsistencies.

20 April 2016	<p>1. Changes made to the Inclusion/Exclusion Criteria in protocol version 3.0 (22 January 2016):</p> <p>a. Inclusion criterion #11 was modified for HBeAg positive subjects only:</p> <p>i. ALT at screening ≥ 35 U/L (males) or ≥ 30 U/L (females)</p> <p>ii. Source document verifiable ALT ≥ 35 U/L (males) or ≥ 30 U/L (females) within the last 6 months</p> <p>iii. Tests positive at Screening for presence of basal core promoter mutation</p> <p>For clarity, once any of the above criteria are met in an HBeAg positive subject, this inclusion criteria is to be considered met and the subject can be enrolled.</p> <p>Additionally, there are no corresponding criteria for HBeAg negative subjects. All HBeAg negative subjects can be enrolled assuming they meet all other inclusion and exclusion criteria.</p> <p>b. Exclusion criterion #5 was revised for Liver Elastography (i.e. FibroScan®) score > 10.59 or FibroTest/Fibrosure score > 0.7 at screening.</p> <p>c. Exclusion criterion #8 was removed as Sponsor did not feel the need to exclude patients with poorly controlled diabetes mellitus with a diagnosis of fatty liver disease.</p> <p>d. Exclusion criterion #14 was revised to allow patients with well-controlled blood pressure on hypertensive medication regardless of the time duration.</p> <p>e. Exclusion criterion #17 was removed as it duplicates inclusion criterion #4.</p> <p>f. Exclusion criterion #22 was removed as it duplicates exclusion criteria #27-28.</p> <p>2. Addition of basal core promoter mutation test for the HBV Genotyping lab sample collected at Screening.</p> <p>3. Addition of treatment stopping rule that ARC-520 may be discontinued in any subject with treatment emergent platelet count of $< 35,000$ per microliter.</p> <p>4. Update to the ARC-520 risk assessment for patients.</p> <p>5. Additional allowance of Acetaminophen use at the discretion of the PI during pre-treatment or post-treatment or at any other time during the study.</p> <p>6. Change "Arrowhead Research Corporation" to "Arrowhead Pharmaceuticals, Inc." due to Sponsor name change.</p> <p>7. Minor corrections.</p>
12 May 2016	<p>1. Correct typo in the protocol secondary objective to determine the percentage of patients achieving a 1-log reduction in achieving a HBsAg level < 100 IU/mL.</p> <p>2. Change made to the Inclusion/Exclusion Criteria in protocol version 4.0 (20 April 2016):</p> <p>a. Inclusion criterion #8 does not apply to Cohort 7 HDV patients</p> <p>3. Correction of administrative, grammatical, formatting errors, and inconsistencies.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The ARC-520 Injection development program was terminated early for regulatory and business reasons secondary to findings occurring in a non-clinical toxicology study. Program termination was not due to safety findings in humans.

Notes:
