Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 December 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 April 2020
Global end of trial reached?	Yes
Global end of trial date	03 December 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Evaluate the safety, efficacy, and immunological effects of anti-BAFF treatment Belimumab in lupus patients after B cell depletion therapy. To obtain preliminary evidence for efficacy of the anti-BAFF therapeutic belimumab after rituximab in SLE.

Protection of trial subjects:

The trial was conducted in compliance with the approved protocol, the Declaration of Helsinki (2008), the principles of Good Clinical Practice (GCP) as laid down by the Commission Directive 2005/28/EC with implementation in national legislation in the UK by Statutory Instrument 2004/1031 and subsequent amendments, the Human Tissue (Quality and Safety for Human Application) Regulations 2007, the UK Data Protection Act, and the National Health Service (NHS) Research Governance Framework for Health and Social Care (RGF). Although Rituximab therapy is given as standard of care, the sequential combination of Belimumab soon after Rituximab, has never been given before and so this was a phase II trial assessing the safety and efficacy of this strategy. Adverse Events were collected throughout the trial and treated accordingly. Participants were reviewed every 4 weeks when treatment was administered, up until 52 weeks of treatment. The protocol included steps to take in cases of abnormal liver chemistry results. To manage hypersensitivity reactions (infusion reactions/anaphylaxis) participants were monitored for 3 hours after completing each of the first 2 infusions (when it was more frequently to occur). For subsequent infusions, participants were monitored during and for an appropriate period of time after completing the infusion as per local policies. In cases of severe reactions, study treatment was discontinued immediately and the appropriate medical therapy administered. Protocol pre-defined reasons for discontinuation of treatment were in place. As participation was voluntary, participants were free to discontinue at any given time without giving reason and without it affecting their normal standard of care.

Background therapy:

All participants were permitted to receive Rituximab treatment (B cell depletion therapy) as standard of care and had to have received two cycles after being screened and consented, with the first cycle occurring 4-8 weeks prior to randomisation.

Evidence for comparator: -

Actual start date of recruitment	08 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 52
Worldwide total number of subjects	52
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	51
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment started 8th November 2016 and ended 29th March 2019. Participants were recruited from 16 specialist lupus centres in England. Participants were randomised 1:1 (Belimumab or Placebo). Participants had to be due their first cycle of Rituximab therapy (standard of care) 4-8 weeks prior to randomisation.

Pre-assignment

Screening details:

Systemic Lupus Erythematosus (SLE) patients with active lupus resistant to conventional therapy and receiving B cell depletion therapy (Rituximab) as standard of care. Participants with anti-dsDNA antibodies detectable in the past 5 years. Written informed consent obtained prior to any trial activities commencing. Standard of care bloods assessed.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

Participants were randomised 1:1 ratio to receive either Belimumab or Placebo treatment using a secure online randomisation service provider, Sealed Envelope (SE). Randomisation was performed using minimisation, incorporating a random element to maximise balance in the stratifying variables. The unblinded trial statistician produced a unique list of infusion codes and this was incorporated into SE and provided to the unblinded pharmacists at sites.

Arms

Are arms mutually exclusive?	Yes
Arm title	Belimumab

Arm description:

IV infusion administered according to the standard dosage regime. 10mg/kg at 2-week intervals for the first 3 infusions (Day 0, week 2 and week 4), and 4-weekly intervals thereafter for a total of 52 weeks (weeks 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52).

Arm type	Experimental
Investigational medicinal product name	Belimumab
Investigational medicinal product code	
Other name	Benlysta
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

400mg single use vial of Belimumab reconstituted and diluted prior to administration. 10mg/kg administered over a period of 1 hour at 2-week intervals for the first 3 infusions (Day 0, week 2 and week 4), and 4-weekly intervals thereafter for a total of 52 weeks (weeks 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52).

Arm title	Placebo (Saline)
------------------	------------------

Arm description:

Sodium Chloride (0.9% solution) 10mg/kg IV infusions at 2-week intervals for the first 3 infusions (Day 0, week 2 and week 4), and 4-weekly intervals thereafter for a total of 52 weeks (weeks 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52).

Arm type	Placebo
----------	---------

Investigational medicinal product name	Saline
Investigational medicinal product code	
Other name	Sodium Chloride 0.9% solution
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

10mg/kg IV infusions at 2-week intervals for the first 3 infusions (Day 0, week 2 and week 4), and 4-weekly intervals thereafter for a total of 52 weeks (weeks 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52).

Number of subjects in period 1	Belimumab	Placebo (Saline)
Started	26	26
Completed	16	16
Not completed	10	10
Consent withdrawn by subject	5	2
Adverse event, non-fatal	5	7
Protocol deviation	-	1

Statistical analyses

Statistical analysis title	ANCOVA at 52 weeks
Statistical analysis description: Linear regression analysis of covariance (ANCOVA) models were used to evaluate the difference in IgG anti-dsDNA antibody levels (log-transformed) between treatment groups at week 52. This model adjusted for CD19 count at randomization (<0.01 or $\geq 0.01 \times 10^9/L$), renal involvement at screening, and log anti-dsDNA levels at screening and randomization. The intention-to-treat analysis included all participants who were randomly assigned and contributed the relevant data at the timepoint analyzed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All safety events (adverse event, adverse reaction, serious adverse event, serious adverse reaction) were to be reported from the time of randomisation until 30 days after the last treatment administration (end of study visit).

Adverse event reporting additional description:

Adverse events did not include:

- Medical or surgical procedures
- Pre-existing disease or condition present before treatment that does not worsen
- Hospitalisation where no untoward or unintended response has occurred e.g. elective cosmetic surgery
- Any new symptoms recorded on the BILAG 2004 Index which is related to SLE

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 October 2016	Protocol updated to v2.0 - first protocol version approved for global use.
25 April 2017	Protocol updated to v3.0 - Reduction to the frequency of some routine blood collection. Changes to secondary outcome with additional exploratory outcomes added. Extended time from 1st SOC infusion to 1st day of trial treatment. Additional exclusion criteria. Updated liver stopping criteria (as per funders requests). Treatment windows added.
15 May 2018	Protocol updated to v4.0 - Changes to inclusion #3 and clarification to inclusion #4. Additional text to address contraception use for male participants. Inclusion of Pregnancy monitoring PIS/ICF for participants and their partners. Length of trial shortened; follow up visits 60 and 64 removed.
13 March 2019	<p>Protocol updated to v5.0 - Changes to Secondary Outcomes:</p> <ul style="list-style-type: none">- Specific times of follow-up at which secondary outcomes will be analysed have been added where these were previously missing.- Additional outcome; 'Proportion of participants' with any serious adverse events by week 52 has been added (secondary outcome #3).- Distinction made between 'severe' (2 BILAG B or 1 A) and 'moderate' flare (1 BILAG B with increase in any concomitant medication).- Additional outcome; the proportion of patients who have any 'severe or moderate' flare by 52 weeks (secondary outcome #6).- Steroids and immunosuppressant's allowed post-randomisation, added to secondary outcome #6 to capture all steroid changes and any potential moderate flares as per the trial Statistical Analysis Plan.- The analysis of EQ5D changed from analysis of the value at 52 weeks to analysis of the average value from randomisation as per the trial Statistical Analysis Plan. <p>The statistical analysis plan has been amended to change the primary analysis to intention to treat, and added to two supportive analysis of the primary outcome; an analysis of whether trial treatment effects are mediated by changes in concomitant medication following randomisation, and an additional analysis of 52-week anti-dsDNA which excludes measurements taken after any increase in a concomitant medication due to flare (using instead the last anti-dsDNA measurement taken prior to this point). A secondary per-protocol analysis of the primary outcome will be also be done.</p> <p>Further clarification on the dose reduction of prednisolone following randomisation.</p> <p>Removal of anti-dsDNA collected and processed locally by sites at visit 17 (Participant Timeline section 6.6.).</p> <p>Further clarification added to Participant Timeline to address the trial assessments performed at withdrawal and patient reported severe flares.</p> <p>Updates to the roles/responsibilities of sponsor trial team and general admin changes throughout protocol.</p>
02 September 2019	Protocol updated to v6.0 - To include information provided by GlaxoSmithKline (GSK) in regards to the risks of serious depression and/or suicidal Ideation or behaviour or self-Injury during treatment with belimumab. Update to contact details of the Sponsor's trial team at UCL CCTU.

25 February 2020	<p>Protocol updated to v7.0 - The statistical analysis plan changed, following discussion about the analysis strategy and production of the BEAT-LUPUS statistical analysis plan (SAP) document in Autumn 2019. The following sections regarding the analysis have been changed in the protocol to match the new SAP:</p> <ul style="list-style-type: none"> - The structured trial summary outcomes list has been updated - In Section 6.5 Outcomes, the outcomes list has been updated - Section 6.10 Data Collection, Management and Analysis has been changed to reflect changes to the SAP.
------------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
