Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 November 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 July 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the safety and tolerability of lucinactant for inhalation, administered as an aerosolized dose in 4 escalating doses to preterm, neonates 26 to 28 completed weeks PMA with receiving nCPAP for RDS compared with neonates receiving nCPAP alone.

Protection of trial subjects:

A Safety Review Committee was established to review safety data for this study. SRC was formed to evaluate the degree of risk involved in study subject participation within each dosing group to determine if study continuation in accordance with the current protocol held the potential to institute any undue harm, or threat to the safety and welfare of study subjects.

After all active subject within Dosing Group 1 completed Study Day 7, a safety assessment (AEs incl. ADEs, SAEs and additional safety endpoints) was performed. Dosing was allowed to continue to the next higher dosing group (ie. Dosing Group II) immediately following completion of enrollment within the current dosing group. The SRC provided recommendations following their review of the safety data. This process of continuing to the next higher dosing group and reviewing safety and tolerability was to be continued for the 100 and 150mg TPL/kg group. Subject were followed for safety evaluations until the subject were 36 weeks PMA or were discharged. A final visit occurred at 36 weeks PMA or at time of discharge or withdrawal for all subjects.

Background therapy:

Standard of care (nCPAP alone)

Evidence for comparator: -

Actual start date of recruitment	01 October 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Canada: 16
Country: Number of subjects enrolled	Chile: 1
Country: Number of subjects enrolled	United States: 26
Worldwide total number of subjects	48
EEA total number of subjects	5

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	48
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

1. Signed ICF from legally representative
2. Gestational age 26 to 28 weeks PMA
3. Implementation of controlled nCPAP within 90min after birth
4. Spontaneous breathing
5. Chest radiograph consistent with RDS
6. Within first 20hours after birth, required nCPAP of 5-6cm H₂O and FiO₂ of 0,25-0,50 that was clinically indicated for min. 30mins

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This study was an open-label study to determine the safety and tolerability of lucinactant for inhalation. No blinding or masking procedures were implemented.

Arms

Are arms mutually exclusive?	Yes
Arm title	50mg/kg

Arm description:

Lucinactant for inhalation 50 mg total phospholipids (TPL)/kg with nCPAP (drug-device combination product)

1 repeat dose allowed if repeat dosing criteria are met.

Arm type	Experimental
Investigational medicinal product name	Lucinactant for inhalation
Investigational medicinal product code	
Other name	AEROSURF®
Pharmaceutical forms	Nebuliser suspension
Routes of administration	Inhalation use

Dosage and administration details:

50 mg TPL/kg administered over 30 minutes in conjunction with nCPAP.

1 Repeat dose of 50 mg TPL/kg administered was allowed if repeat dosing criteria were met

Arm title	75mg/kg
------------------	---------

Arm description:

Lucinactant inhalation 75 mg TPL/kg with nCPAP (drug-device combination product)

1 repeat dose allowed if repeat dosing criteria are met

Arm type	Experimental
Investigational medicinal product name	Lucinactant for inhalation
Investigational medicinal product code	
Other name	AEROSURF®
Pharmaceutical forms	Nebuliser suspension
Routes of administration	Inhalation use

Dosage and administration details:

75 mg TPL/kg administered over 45 minutes in conjunction with nCPAP

1 repeat dose of 75 mg TPL/kg was allowed if repeat dosing criteria are met

Arm title	100 mg/kg
------------------	-----------

Arm description:

Lucinactant for inhalation 100mg TPL/kg with nCPAP (drug-device combination product)
1 repeat dosing will be allowed if repeat criteria are met.

Arm type	Experimental
Investigational medicinal product name	Lucinactant for inhalation
Investigational medicinal product code	
Other name	AEROSURF®
Pharmaceutical forms	Nebuliser suspension
Routes of administration	Inhalation use

Dosage and administration details:

100 mg TPL/kg administered over 60 minutes in conjunction with nCPAP
1 repeat dose of 100 mg TPL/kg was allowed if repeat dosing criteria are met

Arm title	nCPAP only
------------------	------------

Arm description:

nCPAP therapy alone

Arm type	No intervention
No investigational medicinal product assigned in this arm

Apgar Score at One Minute			
The Apgar Score measures a baby's health by assessing five characteristics (Appearance, Pulse, Grimace, Activity, and Respiration) . Each of the five characteristics are scored from 0 to 2, and the five scores are summed for the Apgar Score. Thus, the Apgar Score ranges from 0 (worst) to 10 (best), and scores over 7 indicate a baby in good health. Apgar Scores are performed at 1 minute and 5 minutes after birth.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 September 2015	<p>Rationale for protocol amendment</p> <ul style="list-style-type: none">- additional requirement of meeting criteria at treatment initiation added- additional clarification on repeat dose- typo corrections- clarification of "completion of study"- SRC approval not required to advance to next dosing level- repeat dosing criteria changed- concomitant medications - additional clarifications added- supplement to the instruction for ADP returns- clarification of when SRC meeting would be held following a death- clarification of peri-dosing events

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
09 July 2017	<p>The sponsor of study 03-CL-1401, Windtree Therapeutics, Inc. has made a decision to terminate the dose-escalation study early after the completion of enrollment into Dose Group 3 3. It was anticipated 64 subjects would be enrolled into the study in four dose groups; however, only 48 subjects were enrolled (Dose Groups 1,2,3; n=16 per group).</p> <p>The decision to terminate the study early was taken to incorporate learning from this study into a redesigned trial to continue studying neonates in the 26-28 week gestational age. To this end, sponsor planned to study the 26-28 week GA patients in the amendment (Amendment 2) to the 03-CL-1202 study.</p> <p>A preliminary review of the data through Dose Group 3 has shown no safety signal of concern and the overall safety and tolerability profile was generally similar to the control group treated with nCPAP alone. A maximum tolerated dose was not established, the overall objective of the study was met. Early termination of 03-CL-1401 study has no effect on the overall risk-benefit assessment of lucinactant for inhalation. Last subject randomized into the study was on 16 May 2017 and was followed through study completion, which is 36 weeks PMA (9 July 2017)</p>	-

Notes:

Limitations and caveats

None reported
