Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 September 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	28 September 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study is to evaluate the efficacy of the study drug known as lanabecestat in participants with mild Alzheimer's disease (AD) dementia.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 July 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czech Republic: 129
Country: Number of subjects enrolled	United States: 600
Country: Number of subjects enrolled	Japan: 119
Country: Number of subjects enrolled	United Kingdom: 68
Country: Number of subjects enrolled	Portugal: 24
Country: Number of subjects enrolled	Russian Federation: 100
Country: Number of subjects enrolled	Spain: 78
Country: Number of subjects enrolled	Canada: 96
Country: Number of subjects enrolled	Korea, Republic of: 59
Country: Number of subjects enrolled	Netherlands: 30
Country: Number of subjects enrolled	China: 2
Country: Number of subjects enrolled	Taiwan: 24
Country: Number of subjects enrolled	Poland: 122
Country: Number of subjects enrolled	Denmark: 23
Country: Number of subjects enrolled	Italy: 66
Country: Number of subjects enrolled	Mexico: 29

Country: Number of subjects enrolled	France: 93
Country: Number of subjects enrolled	Germany: 60
Worldwide total number of subjects	1722
EEA total number of subjects	693

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	257
From 65 to 84 years	1435
85 years and over	30

Subject disposition

Recruitment

Recruitment details:

No Text Available

Pre-assignment

Screening details:

In Period 1, per the protocol, placebo-controlled groups (Placebo for 78 weeks then Lanabecestat 20 mg; Placebo for 78 weeks then Lanabecestat 50 mg) were combined to form one placebo group. As study terminated early and very few participants entered into the period 2, the arms in period 2 are combined based on dose exposure for ease of comparison.

Period 1

Period 1 title	Placebo-Controlled Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo film-coated oral tablets once daily.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Film-coated tablets of placebo administered orally once a day.

Arm title	Lanabecestat 20 mg

Arm description:

Participants received lanabecestat 20 mg film-coated oral tablets once daily.

Arm type	Experimental
Investigational medicinal product name	Lanabecestat
Investigational medicinal product code	
Other name	LY3314814, AZD3293
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

20 mg film-coated tablets of lanabecestat administered orally once a day.

Arm title	Lanabecestat 50 mg

Arm description:

Participants received lanabecestat 50 mg film-coated oral tablets once daily.

Arm type	Experimental

Investigational medicinal product name	Lanabecestat
Investigational medicinal product code	
Other name	LY3314814, AZD3293
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

50 mg film-coated tablets of lanabecestat administered orally once a day.

Number of subjects in period 1	Placebo	Lanabecestat 20 mg	Lanabecestat 50 mg
Started	562	590	570
Received at Least 1 Dose of Study Drug	558	588	568
Completed	26	28	22
Not completed	536	562	548
Adverse event, serious fatal	4	2	3
Consent withdrawn by subject	15	20	23
Physician decision	3	1	3
Non-Compliance	-	1	-
Adverse event, non-fatal	13	17	13
Withdrawal due to Caregiver Circumstance	3	3	9
Other-selected by Investigator	-	1	2
Sponsor Decision	494	512	492
Lost to follow-up	3	3	1
Protocol deviation	1	2	-
Lack of efficacy	-	-	2

Period 2

Period 2 title	Delayed-Start Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes

Arm title	Lanabecestat 20 mg
Arm description:	
Participants received lanabecestat 20 mg film-coated oral tablets once daily.	
Arm type	Experimental
Investigational medicinal product name	Lanabecestat
Investigational medicinal product code	
Other name	LY3314814, AZD3293
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
20 mg film-coated tablets of lanabecestat administered orally.	

Arm title	Lanabecestat 50 mg
Arm description:	
Participants received lanabecestat 50 mg film-coated oral tablets once daily.	
Arm type	Experimental
Investigational medicinal product name	Lanabecestat
Investigational medicinal product code	
Other name	LY3314814, AZD3293
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
50 mg film-coated tablets of lanabecestat administered orally.	

Number of subjects in period 2[1]	Lanabecestat 20 mg	Lanabecestat 50 mg
Started	17	12
Received at Least 1 Dose of Study Drug	14	12
Completed	0	0
Not completed	17	12
Sponsor Decision	17	12

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Patients who completed period 1 may not have entered period 2 due to early termination of the study.

Primary: Change from Baseline in Alzheimer´s Disease Assessment Scale- Cognitive Subscale (ADAS-Cog13) Score

End point title	Change from Baseline in Alzheimer´s Disease Assessment Scale- Cognitive Subscale (ADAS-Cog13) Score

End point description:

ADAS-Cog13 is a psychometric instrument that evaluates word recall, ability to follow commands, constructional praxis, naming, ideational praxis, orientation, word recognition, memory, comprehension of spoken language, word-finding, and language ability, with a measure of delayed word recall and concentration/ distractibility. The total score of the 13-item scale ranges from 0 to 85, with an increase in score indicating cognitive worsening. Least Squares (LS) mean was determined by mixed-model repeated measures (MMRM) model with factors for treatment, visit, treatment-by-visit interaction, AChEI (acetylcholinesterase Inhibitor) use at baseline, pooled site, and covariates for baseline ADAS-Cog13 total score, age at baseline, and baseline ADAS-Cog13 total score-by-visit interaction.

Analysis Population Description (APD): All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for ADAS-Cog13 measure.

Secondary: Change from Baseline in Alzheimer´s Disease Cooperative Study Activities of Daily Living Inventory Instrumental Items Score (ADCS-iADL)

End point title	Change from Baseline in Alzheimer´s Disease Cooperative Study Activities of Daily Living Inventory Instrumental Items Score (ADCS-iADL)

End point description:

The ADCS-ADL is a 23-item inventory developed as a rater-administered questionnaire answered by the participant's caregiver. The ADCS-ADL measures both basic and instrumental activities of daily living by participants. The range for the ADCS-iADL is 0-59 with higher scores reflecting better performance. LS Mean was determined by MMRM model with factors for treatment, visit, treatment-by-visit interaction, AChEI use at baseline, pooled site, and covariates for baseline iADL score, age at baseline, and baseline iADL score-by-visit interaction.
APD: All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for ADCS-iADL measure.

Secondary: Change from Baseline in Functional Activities Questionnaire (FAQ) Score

End point title	Change from Baseline in Functional Activities Questionnaire (FAQ) Score

End point description:

FAQ is a 10-item, caregiver-based questionnaire and was administered to the study partner who was asked to rate the participant's ability to perform a variety of activities ranging from writing checks, assembling tax records, shopping, playing games, food preparation, traveling, keeping appointments, traveling out of neighborhood, keeping track of current events and understanding media. FAQ total score was calculated by adding the scores from each of the 10 items. Each activity is rated on a scale from 0 to 3 (Never did and would have difficulty now=1; never did [the activity] but could do now =0; normal =0; has difficulty but does by self =1; requires assistance= 2; Dependent = 3). The maximum FAQ total score is 30, with higher scores indicating greater impairment. LS Mean determined by MMRM model. APD: All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for FAQ score.

Secondary: Change from Baseline on the Integrated Alzheimer's Disease Rating Scale (iADRS) Score

End point title	Change from Baseline on the Integrated Alzheimer's Disease Rating Scale (iADRS) Score

End point description:

The iADRS is a composite that measures both cognition and function. The iADRS comprises scores form the ADAS- Cog and the ADCS-iADL. The iADRS is calculated as a linear combination of the total scores of the ADAS-Cog13 (score range 0 to 85 with higher scores reflecting worse performance) and the ADCS-iADL (score range from 0-59 with higher scores reflecting better performance). The iADRS score ranges from 0 to 144 with higher scores indicating greater impairment. LS Mean was determined by MMRM with factors for treatment, visit, treatment-by-visit interaction, AChEI use at baseline, pooled site, and covariates for baseline iADRS13 total score, age at baseline, and baseline iADRS13 total score-by-visit interaction.
APD: All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for iADRS.

Secondary: Change from Baseline in the Clinical Dementia Rating - Sum of Boxes (CDR-SB) Score

End point title	Change from Baseline in the Clinical Dementia Rating - Sum of Boxes (CDR-SB) Score

End point description:

The CDR-SB is a rater administered scale and impairment is scored in each of categories: memory, orientation, judgment and problem solving, community affairs, home and hobbies and personal care. Impairment is scored on a scale in which no dementia = 0, questionable dementia = 0.5, mild dementia = 1, moderate dementia = 2 and severe dementia = 3. The 6 individual category ratings, or "box scores", were added together to give the CDR-Sum of Boxes which ranges from 0-18, with higher scores indicating greater impairment. LS Mean was determined by MMRM methodology with factors for treatment, visit, treatment-by-visit interaction, AChEI use at baseline, pooled site, and covariates for baseline CDR-SB score, age at baseline, and baseline CDR-SB score-by-visit interaction.
APD: All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for CDR-SB.

Secondary: Time to Progression as Measured by Loss of Clinical Dementia Rating (CDR) Global Score Stage

End point title	Time to Progression as Measured by Loss of Clinical Dementia Rating (CDR) Global Score Stage

End point description:

The CDR global score is a composite score calculated using the Washington University CDR-assignment algorithm applied to the 6 individual domain box scores (Morris 1993). The memory domain is considered the primary category that drives the CDR global outcome, and all other domains are secondary. The CDR global score ranges from 0 to 3 (0 = no dementia, 0.5 = questionable dementia, 1 = mild dementia, 2 = moderate dementia, 3 = severe dementia).
APD: All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for CDR global score.

Secondary: Change from Baseline in Neuropsychiatric Inventory (NPI) Score

End point title	Change from Baseline in Neuropsychiatric Inventory (NPI) Score

End point description:

The NPI is a questionnaire administered to caregivers that quantifies behavioral changes. Each of the 12 behavioral domains the caregiver reports as present are scored for Frequency, scale: 1 (Occasionally) to 4 (Very Frequently), and Severity, scale: 1 (Mild) to 3 (Severe). If the domain is reported by the caregiver as 'Not Affected,' that domain is scored as 0. The individual domain scores are calculated by multiplying the frequency times the severity for each domain. NPI Total Score is calculated by adding the individual domain scores together for all 12 domains, with a scores range from 0 to 144, with higher scores indicating a greater severity of neuropsychiatric disturbance. LS Mean was determined by MMRM methodology.
All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for NPI.

Secondary: Change from Baseline on the Mini-Mental State Examination (MMSE)

End point title	Change from Baseline on the Mini-Mental State Examination (MMSE)

End point description:

The MMSE is an instrument used to assess a participant's global cognitive function. The MMSE assesses orientation to time and place, immediate and delayed recall of words, attention and calculation, language (naming, comprehension and repetition), and spatial ability (copying a figure). The range for MMSE total Score is 0 to 30, with a higher score indicating better cognitive performance. LS Mean was determined by MMRM methodology with factors for treatment, visit, treatment-by-visit interaction, AChEI use at baseline, pooled site, and covariates for baseline MMSE total score, age at baseline, and baseline MMSE total score-by-visit interaction.
APD: All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for MMSE.

Secondary: Change From Baseline in Brain Amyloid Burden Using Florbetapir

Amyloid Positron Emission Tomography (PET) Scan

End point title	Change From Baseline in Brain Amyloid Burden Using Florbetapir Amyloid Positron Emission Tomography (PET) Scan

End point description:

Amyloid deposition in the brain is one of the defining neuropathologic findings of Alzheimer's disease. Florbetapir exhibits high affinity specific binding to amyloid plaques. The change from baseline was measured as average standard uptake value ratio in prespecified regions of interest assessed by florbetapir amyloid PET imaging in a subset of participants. The Centiloid standardizes quantitative brain amyloid PET results to allow cross-tracer and cross-methodology comparisons. The Centiloid anchor points are 0 and 100, where 0 represents a high-certainty amyloid negative scan and 100 represents the amount of global amyloid deposition found in a typical AD scans. Florbetapir SUVr was converted to the Centiloid scale using the following conversion: Florbetapir Centiloids = 183 x SUVr-177. LS Mean was determined by using ANCOVA methodology.
APD: All randomized participants who received at least one dose of study drug & have baseline and at least one post-baseline for amyloid burden.

Secondary: Change from Baseline in Regional Cerebral Blood Flow (rCBF) using Florbetapir Perfusion Scan

End point title	Change from Baseline in Regional Cerebral Blood Flow (rCBF) using Florbetapir Perfusion Scan

End point description:

Florbetapir perfusion evaluated the regional cerebral blood flow (rCBF) as a biomarker of brain function and was performed at the same time as the amyloid florbetapir PET. Cerebral perfusion, especially in temporal and parietal areas, is reduced in AD and this pattern of hypoperfusion closely mirrors the hypometabolism pattern observed using FDG PET. Annualized change is derived as change at LOCF divided by (LOCF date - baseline date) multiplied by 365. LS Mean was determined by ANCOVA with LOCF (last observation carried forward) and with factors for treatment, baseline biomarker and age at baseline.
APD: All randomized participants who received at least one dose of study drug and have baseline and at least one post-baseline data for rCBF.

Notes:

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: This event is gender specific, only occurring in male or female subjects. The number of subjects exposed has been adjusted accordingly.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

An independent assessment concluded the trial was not likely to meet the primary endpoint upon completion and therefore, trial stopped for futility.

Notes:
